Workbook guide

How to navigate

To get back to the “content page” you can click on the Norrøna logo in the top left corner.

Content page

From the content page you can easily navigate to the activity or concept that you would like to go to, by clicking on the activity or concept. If you would like to go directly either to the Men’s or Women’s product pages, you can click on either of the genders.

When you are finished looking at one concept, you can go directly back to the content page by clicking on the Norrøna logo in the top left corner.

Material logos

In the product pages you can find material and fabric logos at the of the bottom right corner. To learn about what these logos mean, you can click on the logo. Then you will be sent to the “Technology and Materials” pages with more information.

Product information

Each product page shows one product, with the different colors that exist for that product. If the color is new, you will see “New” at the top left corner of the product picture.

If the product is new, it is written “NEW” over the product name in the top right corner.

Sample size

On our model images, the male models are wearing size large and the female models are wearing size medium.

In the product description we have listed weight for all products, and inseam on shorts and pants. These numbers are based on our sample sizes.

Welcome to nature

There is something about this country, about my homeland of Norway. The fjords, the glaciers, the forests. The waves thundering against the rocky shores. The mountains towering above us. There is something about the Norwegian wilderness that brings out the adventurer in us. There is something about the climate here in the far north; up here, a single day can put us up against the challenges of four different seasons and still be a magical experience. As long as we are well prepared and are wearing the right clothing.

Way back in 1929, my great-grandfather, the young craftsman Jørgen Jørgensen, realized that Norwegians have a constant longing to be outside and deserve the best possible equipment. He developed products without compromise. He laid the cornerstone of what would become Norrøna, now a leading international supplier of outdoor gear.

Norrøna was behind the world's first tunnel shaped tent back in 1972. Norrøna launched Europe's first Gore-Tex jacket in 1977. And we unveiled an anatomical backpack as early as in 1980, functional and stylish clothing for steep freeriding in 2004, a separate collection for singletrack riding in 2008, and functional and sustainable wetsuits for arctic surf in 2017.

Norrøna has been part of expeditions to the North Pole and South Pole, Mount Everest and the Great Trango Tower in the Karakoram. Not to mention, Norrøna has been at the forefront of alpine style climbing in Alaska, Patagonia and Antarctica. Our ambassadors help push the envelope of what is possible in skiing and snowboarding, arctic surf, mountain biking, climbing and polar expeditions.

My great-grandfather, grandfather and father all believed that Norrøna had to create products with the best possible design, cutting-edge functionality and the highest quality. They believed that product development had to be driven by the bravest among us; those who dare to think new; those who take on extreme adventures. We still do.

Welcome to nature.

Jørgen Jørgensen

Fourth-generation owner and chief executive of Norrøna.

Our corporate responsibility

Nature is our playground, our motivation and our source of inspiration – it's the reason why Norrøna exists.

Environmental and social responsibility is a fundamental part of everything we do throughout the company. It is of the utmost importance that our value chain is ethically responsible and that our products are as environmentally friendly as possible. We have a goal of becoming a leader within the field in the outdoor industry and you can study our 2021 CSR roadmap on our website norrøna.com.

While a new Norrøna product is awesome, an old one maybe even more so. A long lifespan is one of the best tools to minimize a product's environmental footprint, so we've been offering repairs on all of our products since the beginning in 1929. By making high-quality gear that lasts for years and can be repaired, we make sure you don't have to buy new stuff. In 2018, we fixed over 10 600 products, an increase of 2000 from 2017.

Norrøna wishes to use as many recycled fabrics and materials when making a garment. This is a guiding principle when designing new products, and when buying fabrics and trims. We are constantly searching the market for high quality recycled fibers and per 2018 71% of our polyester products are made with at least 50% recycled fibers.

As animals have no voice in terms of their well-being, we see it as our obligation to ensure that all of our animal products originate from animals that are treated well and that the processes of retaining the

products are done without causing any harm. By making sure that all of our down products have the RDS (responsible down sourcing) down standard and using traceable, mulesing-free wool, we safeguard the welfare of animals and provide retailers and consumers with a greater confidence in responsible sourcing. As part of our obligation, we do not source fur.

Despite its natural traits and soft feel, conventional cotton poses a long term and highly negative impact on nature. Luckily there's something called organic cotton. Organic cotton is grown using methods that have a lower impact on mother earth, there's no use of toxic chemicals, and it promotes and enhances biodiversity and biological cycles. Today, all of our cotton products are made of 100% organic cotton.

All though there are many challenges, seeing results and knowing that we can influence people's work environment on the other side of the globe gives us the motivation to work even harder. Norrøna is working to promote proper labor and environmental conditions in our supply chains through close cooperation with our suppliers and partners. To clarify what we expect from our suppliers Norrøna has developed guidelines for ethical trade in our value chain; the Codes of Conduct. All Norrøna suppliers must sign them before entering a partnership and we inspect and follow up all of our factories according to our policy.

Our commitment goes beyond the value chain of our products. We strive to be as socially and environmentally responsible as possible as a company and have specific targets related to our employees, our HQ at Lysaker, and the company as a whole. The Norrøna House is exclusively powered by renewable energy and we have the ambition of all employees traveling sustainably by the end of 2020. In 2018 98 % of the employees commuted eco-friendly and we've initiated several alternatives to achieve this, e.g wardrobes with showers, parking reserved electric or hybrid cars and internal bike/walk/run to work competitions. We also have a long-term ambition to become a zero waste to landfill HQ, meaning all waste generated at our HW will be recycled.

In true Norrøna spirit, we want to contribute to the conservation and protection of the nature. Since 2015 we have taken 1% of our sales and put it in a fund reserved for causes and organizations working to promote sustainability and environmentally friendly initiatives. So far, we've donated 20,2 million NOK and there's more to come.

Repairs since 1929

We've been offering repairs on all of our products since the beginning in 1929, actively promoting a long lifetime for our products. Every year, we give thousands of products some extra love and care, so they can join adventures for decades.

We have repair centers in stores around the world. In 2018, we repaired over 11 000 products, securing long product lifetime – even on many products over 30 years old.

Norway

Our inspiration

At Norrøna, we name our collections after epic destinations in Norway. Each place, mountain, or island describe their areas of use. All products are developed to meet the extreme users’ requirements to materials, quality, fit, and functionality following our design philosophy, Loaded Minimalism™.

Ski/Snowboard

We divide our ski/snowboard category into three distinctive concepts; lofoten, tamok, and lyngen, all with purpose-built solutions for their intended activity.

Mountaineering

We divide our mountaineering category into three concepts; trollveggen, falketind, and lyngen. Developed to master big walls, long climbs, and various conditions, each garment is created to push the limits of protection, durability, and mobility.

Outdoor/Hiking

Our hiking collections each assist your quest to boldly encounter nature; svalbard supports general hiking and trekking demands, and bitihorn backs up fast trekking protection in addition to falketind for all weather and conditions.

Mountain Biking

Norrøna’s collection for mountain biking is divided into two: fjørå and skibotn. Rain and rough terrain demand functional clothing that will keep you warm and protected – without sacrificing range of motion.

Hunting

We divide our hunting category into three concepts: kvinnherad, finnskogen, and recon. So whether you hunt in the mountains or the forest or need the most durable hunting equipment, we have a choice for you.

Lifestyle

Hang up the heavy technical gear and do your own thing in comfort and style with everyday basics and activewear. Built with functional twists and solutions, 100% organic cotton, and recycled designs.

Surfing

The arctic ocean – a challenge for our vision, “Welcome to nature”. Designed to withstand the harsh, Arctic waters, this collection offers comfort and warmth with sustainable materials.

falketind

all season, any weather

All season, any weather. With it's functional, technical and dynamic products, falketind is our most versatile collection offering the perfect set-up for all seasons and any weather, regardless of your activities.

falketind Gore-Tex Jacket M's

1802-21

€ 519.-

The falketind Gore-Tex Jacket is our most versatile waterproof and breathable jacket developed for all-season use.

This bestselling Gore-Tex Jacket is one of our lightest versatile shell jackets made for all seasons and any weather, initially designed for lightweight mountaineering. The wind and waterproof jacket is durable enough for winter use and light enough for the summertime. The light, recycled Gore-Tex® fabric with a smooth backer, makes it great for a weekend up in the mountains as well as expeditions to your local trails.

The 30D 3-layer recycled, mini ripstop Gore-Tex fabric has a light, yet durable face material for its weight, and a smooth backer. The jacket has a technical fit with a slight Y-shape silhouette for the men to increase mobility, and secure a dynamic look and functionality.

The jacket has a regular fit with a silhouette designed to increase mobility, and ensure a dynamic look and functionality.

Critical features include long underarm vents, articulated sleeves, mid-mounted pockets, storm hood fitted for a helmet, and asymmetric cuffs for better weather protection. This is an excellent choice for the outdoor enthusiast in search of a very versatile and lightweight all-season jacket.

falketind Gore-Tex Pants M's

1875-20 € 479.-

The falketind Gore-Tex Pants are our most versatile waterproof, windproof and breathable pants made for all season use.

They're light enough to be used in the summer use and durable enough for winter adventures. These pants are developed for all kinds of mountaineering activities, wide enough to fit randonee boots and tight enough to be used with crampons.

Made of a special developed recycled 40D Gore-Tex fabric they hit the sweet spot between all-year versatility and great protection. The slightly brushed and comfortable backer has a smooth and even finish which feels comfortable next to skin.

The Custom-fit waist system™ ensures good adjustment while the side zips can be zipped up to get the air flowing in. Other features include an inside gaiter hook, reinforced inside leg and a practical thigh pocket.

Material	Gore-Tex® 3-layer, 40D recycled nylon	
Inseam length	85,5 cm (size L)	
Fit	Regular	
Weight	472 g	
Size	S-XXL	

falketind Gore-Tex Paclite Jacket M's

1812-22

€ 349.-

Our lightest, most packable waterproof shell jacket.

This lightweight shell jacket is made for all-year mountaineering, but works great for general outdoor activities all year, from trekking to ski touring. It's very packable and therefore easy to always bring along. We use a Gore-Tex® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

This jacket is made in GORE-TEX PACLITE® PLUS fabric – a soft, lightweight (75/g m2) tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

Main features include a helmet-compatible hood with one-hand adjustment, cuffs with Velcro® adjustments, an elastic bottom hem, a zippered chest pocket, and zippered front chest ventilation. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind Gore-Tex Paclite Pants M's

1811-22

€ 329.-

Our lightest, most packable waterproof shell pants.

These lightweight shell pants are made for all-year mountaineering, but work great for general outdoor activities all year, from trekking to ski touring. We use A Gore-Tex® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

These pants are made in a GORE-TEX PACLITE® PLUS fabric – a soft, lightweight tiny rip-stop fabric with a 30D recycled nylon face. It’s extremely packable, thin, and lightweight while being durably waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior. The bottom leg is made in a 30D 3L GORE-TEX 30D to increase durability where the pants tend to rub against your boots.

Main features include a Custom-fit waist system™, a zippered thigh pocket with a mesh pocket, ¾ side zippers for flexible ventilation and effective dressing, a bootlace hook, Velcro® adjustment on the ankles, and eyelets if you want to fasten a cord around the boot to make sure it stays in place. The pants have a technical fit with articulated knees to improve mobility.

falketind thermo40 Shorts M's

1810-21

€ 189.-

Our most versatile and flexible insulation shorts.

Providing windproofness and water-resistance, the main fabric is a lightweight recycled 20D nylon. It’s also highly packable, and durable for its weight, making it perfect for a bring-along insulation shorts. The main insulation is a recycled thermo40 with a thermo60 in the seat. The thermo40 insulation provides great insulation even when it is damp, has a high warmth-to-weight ratio and is the most packable insulation product in our range.

The shorts is the sibling to our falketind thermo60 Hood, providing the perfect balance between insulation, lightweight and packability for your lower body. It’s an all-season, windproof insulation garment which works great as an outer layer or underneath a shell pant. With a full zip solution, these pants can easily be put on and taken off without removing your shoes/pants, and the zippers on the side are coordinated so you will not use valuable time trying to match them up. It compresses into a packable pocket on the thigh, which makes it super easy to bring along.

The shorts have a technical fit yet fit over pants or shorts. It has an above knee cap length and a quilted front around the hip flexors to lock the insulation in place in this area and achieve natural folds.

Other features: elasticated waistband, front fly with zip snap button closure, one zippered thigh pockets.

falketind down750 Hood M's

1833-20

€ 349.-

The falketind down750 Hood Jacket is our most versatile down jacket with a hood made for all activities, all year. Lightweight, easy to compress and filled with certified down.

The falketind down750 Hood Jacket is made for all-season use. The jacket is lightweight and can be compressed into its own pocket which makes it a perfect bring-along insulating piece. The face fabric is recycled 20D nylon with PFC free water repellency, and the down is traceable and RDS certified.

This jacket works perfectly as an outer layer on cold summer days as well as mid-layer during the winter. To prevent heat-loss in moist conditions, the sides, neck and lower arms have synthetic insulating.

The down is distributed in a t-shirt shape to ensure great warming properties where it is most needed. The shoulder piece is made of a combination of down and synthetic material to ensure durability in this exposed area. The shoulders and sleeves are reinforced in a 45D recycled nylon for long-lasting durability.

Other features include hand warming pockets, chest pocket, adjustable hood, and elastic cuffs.

falketind thermo60 Hood M's

1804-22

€ 289.-

Our warmest, most versatile lightweight synthetic insulation jacket.

This lightweight insulation jacket is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use our AeroDownproof face fabric to provide windproofness, lightweight and soft touch, and our thermo60 synthetic insulation which offers great warmth-to-weight values, good packability and will provide insulation even when wet.

The thermo60 insulation used is a 60g/m2 100% recycled polyester insulation which gives great thermal insulation to help the body to maintain its temperature, hence minimizing energy loss. The main face fabric is a windproof 20D recycled nylon ripstop fabric, and the shoulders, arms, and hood are reinforced with a durable and structured 30D lightweight rip-stop nylon Cordura for extra protection and durability. Both have PFC-free DWR treatment for additional water resistance.

Main features include a helmet-compatible hood with one-hand adjustment, a chest pocket with zipper, two hand pockets, and elastic cuffs. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. It's made to fit over and under the falketind Gore-Tex Jacket and is slightly short in length.

falketind aero60 Hood M's

1810-22 € 199.-

Our most breathable and lightweight wind jacket with water shedding properties.

This packable wind jacket is made for lightweight mountaineering but works excellent for other mid to high-intensity activities ranging from trail running to ski touring. We use our aero60 windshield fabric because it offers a sweet spot between breathability and windproofness as well as durability and lightweight.

The lightweight recycled ripstop nylon has a slightly open weave construction and an air permeability around 60 Mbar/l/m²/s for good moisture vapor transportation during aerobic activities.

Main features include an adjustable hood which can be neatly folded when not in use, mesh under the arms for extra ventilation, a chest pocket with a mobile pocket that can room the jacket packed down, elastic hem, elastic cuffs, and a special front button to keep the jacket semi-closed and put while having the front zipper all open. It has a slim fit with articulated arms for good mobility.

falketind Octa Jacket M's

1806-20 € 219.-

The unique falketind Octa Jacket is an all-year insulation piece offering low weight, great breathability, dynamic functionality and comfortable protection.

With its sleek design and impeccable functionality, it can be worn alone or in combination with an outer layer both spring, summer, and fall or during high-intensity activities in the winter.

The unique Octa lining provides great insulation even when wet and it's very quick drying thanks to its construction and its multichannel fibers; It is very open, allowing a continuously release of body heat to keep you comfortable during your activities.

The recycled Pertex face fabric offers comfort stretch, great wind resistance, and water repellency. Side panels and cuffs made in flexible warm1 stretch ensure a good and athletic fit and prevent bulkiness.

Other features include a warm and weather protective collar, two spacious mid-mounted pockets for easy access and one-handed elastic adjustment in the hem. It's a very dynamic jacket for all-activity use and especially suitable for mid to high-intensity pursuits like trail running both winter and summer.

Material	Pertex® 51% recycled nylon, 49% nylon

falketind warm2 Octa Hood M's

1815-22

€ 219.-

A versatile, technical midlayer with a unique fabric technology.

This innovative mid-layer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind warmwool2 stretch Zip Hood M's

1820-20 € 239.-

Our falketind warmwool2 stretch Zip Hood is the ultimate all-round, all-year hooded mid-layer.

The jacket is highly stretchable, and the main fabric is a recycled polyester and wool mix with excellent thermal properties and good breathability. It offers great moisture transport when you decide to increase your pace and dries up fast when hung up thanks to the polyester.

The highly durable piece is suitable for everything from everyday strolling at your favorite outdoor destination to hardcore active use. We’ve given the fabric a resin surface treatment for extra pill resistance and enhanced durability. It has a comfy fit and clean look that will work at whatever, whenever.

Practical features include a functional hood, two mid-mounted pockets that won’t interfere with shoulder straps and hip belt, a chest pocket, comfy cuffs, a one-hand adjustable elastic hem and a clean, snug collar. If you’re only investing in one hooded mid-layer for now, we suggest you go for this one.

falketind Alpha120 Zip Hood M's

1815-20

€ 199.-

The falketind Alpha120 Zip Hood for men is our best warmth-to-weight, moisture transporting mid-layer.

This zip hood is a durable mid-layer with great warmth-to-weight properties. It is perfect for the high-intensity adventures as the Polartec® Alpha120 fabric provides excellent warmth and moisture transport.

To make sure your motion range is optimized, as well as decreasing the fabric mass in strategic places, we have added Polartec® Power Grid fabric under the arms and down the sides.

This fabric has great stretch, breathability, and moisture-wicking. It has an athletic and slim fit and has integrated hand gaiters, hand warming pockets, and an insulating hood.

falketind flex1 heavy duty Pants M's

1863-20

€ 219.-

The functional falketind flex1 heavy duty Pants are solid all-rounders perfectly combining durable protection with great comfort and breathability.

The hard-wearing falketind heavy duty Pants are inspired by the original fjørå flex1 and will probably become your go-to favorites for general outdoor pursuits.

They're made with recycled, flexible polyester flex™ 1 fabric reinforcement in the knees, seat, and front leg. This ensures a great range of movement, in addition, to keep you sealed when the wind increases or during light showers.

They have a full-length two-way zipper running from the waist and down so you can customize the pants to suit your needs; The top half from the hip to the knee is an open construction lined with mesh while the bottom is lined with fabric like a classic gusset. This also enables a wider fit from the knee down or an all-over wider fit with ventilation on top. You can also tighten the lower leg with our Velcro adjustment if you're more into a slim fit. Other features include a custom fit waist system, two hand pockets, a hidden gaiter hook, and a practical thigh pocket

The design is clean, versatile and is suitable for a wide variety of outdoor activities.

falketind flex1 Pants M's

1810-20

€ 199.-

The bestselling falketind flex1 Pants are our most versatile soft shell pants developed for light mountaineering and general outdoor activities – all year.

With their flexible fit and functional fabric, they have become a favorite amongst both customers, employees, and ambassadors who seek comfy and lightweight durability. The pants are soft and stretchable with a surface providing wind-resistance and great water repellency to make sure fresh breeze and light pouring won't be an issue. Combined with excellent breathability, they are perfect all-season pants for the outdoor enthusiast who likes to break a sweat every once in a while.

It's made in a recycled flex1 fabric and laminated and stitched pockets. The new, flexible lower leg solution has a zipper closed gusset to increase the areas of use. It can be adjusted to fit closely with low-cut hiking shoes or widened to fit a buckled randonee boot.

Other features include a Custom-Fit waist System, mesh lined ventilation from the hips to the knee, two hand pockets, a back pocket, and a thigh pocket – all with zippers. They also have a hidden gaiter hook on the inside of the lower leg hem. The pants can easily be worn with a base layer under in wintertime.

falketind Gore-Tex Jacket W's

1804-21

€ 519.-

The falketind Gore-Tex Jacket is our most versatile waterproof and breathable jacket developed for all-season use.

This bestselling Gore-Tex Jacket is one of our lightest versatile shell jackets made for all seasons and any weather, initially designed for lightweight mountaineering. The wind and waterproof jacket is durable enough for winter use and light enough for the summertime. The light, recycled Gore-Tex® fabric with a smooth backer, makes it great for a weekend up in the mountains as well as expeditions to your local trails.

The 30D 3-layer recycled, mini ripstop Gore-Tex fabric has a light, yet durable face material for its weight, and a smooth backer. The jacket has a technical fit with a slight Y-shape silhouette for the men to increase mobility, and secure a dynamic look and functionality.

The jacket has a regular fit with a silhouette designed to increase mobility, and ensure a dynamic look and functionality.

Critical features include long underarm vents, articulated sleeves, mid-mounted pockets, storm hood fitted for a helmet, and asymmetric cuffs for better weather protection. This is an excellent choice for the outdoor enthusiast in search of a very versatile and lightweight all-season jacket.

falketind Gore-Tex Paclite Jacket W's

1814-22

€ 349.-

Our lightest, most packable waterproof shell jacket.

This lightweight shell jacket is made for all-year mountaineering, but works great for general outdoor activities all year, from trekking to ski touring. It’s very packable and therefore easy to always bring along. We use a Gore-Tex® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

This jacket is made in GORE-TEX PACLITE® PLUS fabric – a soft, lightweight (75/g m2) tiny rip-stop fabric with a 20D recycled nylon face. It’s extremely packable, thin, and lightweight while being waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

Main features include a helmet-compatible hood with one-hand adjustment, cuffs with Velcro® adjustments, an elastic bottom hem, a zippered chest pocket, and zippered front chest ventilation. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind thermo60 Shorts W's

1811-21

€ 189.-

Our most versatile and flexible insulation shorts.

Providing windproofness and water-resistance, the main fabric is a lightweight recycled 20D nylon. It’s also highly packable, and durable for its weight, making it perfect for a bring-along insulation shorts. The main insulation is a recycled thermo40 with a thermo60 in the seat. The thermo40 insulation provides great insulation even when it is damp, has a high warmth-to-weight ratio and is the most packable insulation product in our range.

The shorts is the sibling to our falketind thermo60 Hood, providing the perfect balance between insulation, lightweight and packability for your lower body. It’s an all-season, windproof insulation garment which works great as an outer layer or underneath a shell pant. With a full zip solution, these pants can easily be put on and taken off without removing your shoes/pants, and the zippers on the side are coordinated so you will not use valuable time trying to match them up. It compresses into a packable pocket on the thigh, which makes it super easy to bring along.

The shorts have a technical fit yet fit over pants or shorts. It has an above knee cap length and a quilted front around the hip flexors to lock the insulation in place in this area and achieve natural folds.

Other features: elasticated waistband, front fly with zip snap button closure, one zippered thigh pockets.

falketind down750 Hood W's

1870-20 € 349.-

The falketind down750 Hood Jacket is our most versatile down jacket with a hood made for all activities, all year. Lightweight, easy to compress and filled with certified down.

The falketind down750 Hood Jacket is made for all-season use. The jacket is lightweight and can be compressed into its own pocket which makes it a perfect bring-along insulating piece. The face fabric is recycled 20D nylon with PFC free water repellency, and the down is traceable and RDS certified.

This jacket works perfectly as an outer layer on cold summer days as well as mid-layer during the winter. To prevent heat-loss in moist conditions, the sides, neck and lower arms have synthetic insulating.

The down is distributed in a t-shirt shape to ensure great warming properties where it is most needed. The shoulder piece is made of a combination of down and synthetic material to ensure durability in this exposed area. The shoulders and sleeves are reinforced in a 45D recycled nylon for long-lasting durability.

Other features include hand warming pockets, chest pocket, adjustable hood, and elastic cuffs.

falketind thermo60 Hood W's

1857-22

€ 289.-

Our warmest, most versatile lightweight synthetic insulation jacket.

This lightweight insulation jacket is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use our AeroDownproof face fabric to provide windproofness, lightweight and soft touch, and our thermo60 synthetic insulation which offers great warmth-to-weight values, good packability and will provide insulation even when wet.

The thermo60 insulation used is a 60g/m2 100% recycled polyester insulation which gives great thermal insulation to help the body to maintain its temperature, hence minimizing energy loss. The main face fabric is a windproof 20D recycled nylon ripstop fabric, and the shoulders, arms, and hood are reinforced with a durable and structured 30D lightweight rip-stop nylon Cordura for extra protection and durability. Both have PFC-free DWR treatment for additional water resistance.

Main features include a helmet-compatible hood with one-hand adjustment, a chest pocket with zipper, two hand pockets, and elastic cuffs. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. It's made to fit over and under the falketind Gore-Tex Jacket and is slightly short in length.

Material	30D 57% recycled nylon, 43% nylon Cordura

falketind aero60 Hood W's

1809-22

€ 199.-

Our most breathable and lightweight wind jacket with water shedding properties.

This packable wind jacket is made for lightweight mountaineering but works excellent for other mid to high-intensity activities ranging from trail running to ski touring. We use our aero60 windshield fabric because it offers a sweet spot between breathability and windproofness as well as durability and lightweight.

The lightweight recycled ripstop nylon has a slightly open weave construction and an air permeability around 60 Mbar/l/m²/s for good moisture vapor transportation during aerobic activities.

Main features include an adjustable hood which can be neatly folded when not in use, mesh under the arms for extra ventilation, a chest pocket with a mobile pocket that can room the jacket packed down, elastic hem, elastic cuffs, and a special front button to keep the jacket semi-closed and put while having the front zipper all open. It has a slim fit with articulated arms for good mobility.

falketind Octa Jacket W's

1858-20

€ 219.-

The unique falketind Octa Jacket is an all-year insulation piece offering low weight, great breathability, dynamic functionality and comfortable protection.

With its sleek design and impeccable functionality, it can be worn alone or in combination with an outer layer both spring, summer, and fall or during high-intensity activities in the winter.

The unique Octa lining provides great insulation even when wet and it's very quick drying thanks to its construction and its multichannel fibers; It is very open, allowing a continuously release of body heat to keep you comfortable during your activities.

The recycled Pertex face fabric offers comfort stretch, great wind resistance, and water repellency. Side panels and cuffs made in flexible warm1 stretch ensure a good and athletic fit and prevent bulkiness.

Other features include a warm and weather protective collar, two spacious mid-mounted pockets for easy access and one-handed elastic adjustment in the hem. It's a very dynamic jacket for all-activity use and especially suitable for mid to high-intensity pursuits like trail running both winter and summer.

falketind warm2 Octa Hood W's

1816-22 € 219.-

A versatile, technical midlayer with a unique fabric technology.

This innovative mid-layer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind warmwool2 stretch Zip Hood W's

1824-20 € 239.-

Our falketind warmwool2 stretch Zip Hood is the ultimate all-round, all-year hooded mid-layer.

The jacket is highly stretchable, and the main fabric is a recycled polyester and wool mix with excellent thermal properties and good breathability. It offers great moisture transport when you decide to increase your pace and dries up fast when hung up thanks to the polyester.

The highly durable piece is suitable for everything from everyday strolling at your favorite outdoor destination to hardcore active use. We’ve given the fabric a resin surface treatment for extra pill resistance and enhanced durability. It has a comfy fit and clean look that will work at whatever, whenever.

Practical features include a functional hood, two mid-mounted pockets that won’t interfere with shoulder straps and hip belt, a chest pocket, comfy cuffs, a one-hand adjustable elastic hem, and a clean, snug collar. If you’re only investing in one hooded mid-layer for now, we suggest you go for this one.

falketind flex1 heavy duty Pants W's

1864-20

€ 219.-

The functional falketind flex1 heavy duty Pants are solid all-rounders perfectly combining durable protection with great comfort and breathability.

The hard-wearing falketind heavy duty Pants are inspired by the original fjørå flex1 and will probably become your go-to favorites for general outdoor pursuits.

They're made with recycled, flexible polyester flex™ 1 fabric reinforcement in the knees, seat, and front leg. This ensures a great range of movement, in addition, to keep you sealed when the wind increases or during light showers.

They have a full-length two-way zipper running from the waist and down so you can customize the pants to suit your needs; The top half from the hip to the knee is an open construction lined with mesh while the bottom is lined with fabric like a classic gusset. This also enables a wider fit from the knee down or an all-over wider fit with ventilation on top. You can also tighten the lower leg with our Velcro adjustment if you're more into a slim fit. Other features include a custom fit waist system, two hand pockets, a hidden gaiter hook, and a practical thigh pocket

The design is clean, versatile and is suitable for a wide variety of outdoor activities.

The bestselling falketind flex1 Pants are our most versatile soft shell pants developed for light mountaineering and general outdoor activities – all year.

With their flexible fit and functional fabric, they have become a favorite amongst both customers, employees, and ambassadors who seek comfy and lightweight durability. The pants are soft and stretchable with a surface providing wind-resistance and great water repellency to make sure fresh breeze and light pouring won't be an issue. Combined with excellent breathability, they are perfect all-season pants for the outdoor enthusiast who likes to break a sweat every once in a while.

It's made in a recycled flex1 fabric and laminated and stitched pockets. The new, flexible lower leg solution has a zipper closed gusset to increase the areas of use. It can be adjusted to fit closely with low-cut hiking shoes or widened to fit a buckled randonee boot.

Other features include a Custom-Fit waist System, mesh lined ventilation from the hips to the knee, two hand pockets, a back pocket, and a thigh pocket – all with zippers. They also have a hidden gaiter hook on the inside of the lower leg hem. The pants can easily be worn with a base layer under in wintertime.

falketind rugged slim Pants W's

1802-22

€ 199.-

Our most durable, breathable softshell pants for mountaineering.

These slim-fit softshell pants are made for all-year mountaineering but are also suitable for general outdoor activities such as trekking and climbing. The main fabric is a 199 gr/m2 flex1 softshell fabric, and we use this because it offers great movement, durability, windproofness, and high breathability. The thickness of the fabric is great for all-year use.

The main material is a 90D recycled double weaved flex1 fabric, our stretchiest double weave quality. It is treated with PFC-free DWR to provide extra wind and water resistance. The thighs, knees, and seat are reinforced with a 160D recycled flex fabric to provide extra protection on exposed areas, and also make the pants perfect for changing conditions.

Main features include a Custom-fit waist system™, a zipped fly with snap closure, two hand pockets with zippers, one thigh pocket, and bottom leg zippers with an internal gusset for adaptability to a different outdoor boot – including hiking boots. They have a flattering, slim fit with articulated knees for good mobility both when trekking, cleaving, and climbing.

Material	64% recycled nylon, 20% recycled polyester, 16% elastane
Material 2nd	91% recycled nylon, 9% elastane

falketind flex1 slim Pants W's

1812-20

€ 179.-

The falketind flex1 slim Pants is a slim legged version of our most versatile softshell pants developed for hiking and general outdoor activities all year.

They're inspired by an all-time favorite amongst many women, the classic running tights, but made in durable softshell fabric and loaded with outdoor functionality.

The double weaved flex1 fabric is soft and stretchable with a surface providing wind-resistance and great water repellency to make sure fresh breeze and light pouring won't be an issue. Combined with excellent breathability, they are perfect all-season pants for women who don't mind breaking a sweat every now and then.

Other features include a Custom-Fit waist System, two hand pockets with zippers, two back pockets, and a slit on the lower leg to make room for mid-high hiking boots. Despite the tight fit, they can be worn with a base layer under in wintertime.

trollveggen

alpine climbing

Descending from Europe's first Gore-Tex jacket in 1977, the trollveggen Gore-Tex jacket and bib revolutionized clothing for alpine climbing. Developed for first accents and demanding expeditions, it's continually refined and still a pinnacle of mountaineering performance. The jacket is named after the wall where it was first tested.

trollveggen Gore-Tex Pro Jacket M's

1603-19€ 789.-

The iconic trollveggen Gore-Tex Pro Jacket is our most durable and protective mountaineering jacket.

The trollveggen Gore-Tex Pro is our pinnacle of mountaineering performance made with extremely durable 70D recycled nylon Gore-Tex Pro fabric. This iconic jacket is historic, dating back to Europe’s first Gore-Tex® jacket in 1977. Today, it's still a legend within mountaineering due to continuous user-driven product development. With the new generation, we’ve redesigned the construction, decreasing the number of parts and seams to provide a more ergonomic fit and allow more efficient movement.

This also increases durability due to fewer exposed connection areas. As a bonus, it looks cleaner while still offering everything you need for any alpine pursuit. It’s made in a new recycled Gore-Tex 70D wave fabric and we’ve added additional length in the back for extra protection.

The jacket has long underarm two-way zippers to provide good ventilation. The storm fitted hood fits a climbing helmet and the two napoleon chest pockets are kept high to avoid interference when using a harness.

The two hand pockets offer extra storage and a hand-warming option when belaying, and also conceals an adjustment cord which can tighten the waistline to trap air if needed.

Despite the longer fit and extra pockets, we’ve managed to match the weight of the previous generation. It has reflective details and we’ve strategically placed color blocks on the dark jacket to ensure visibility and contrast on critical body parts.

Material	Gore-Tex® Pro most breathable 3-layer, 70D X 160D recycled nylon

trollveggen Gore-Tex Pro Bib M's

1604-19

€ 699.-

The trollveggen Gore-Tex Pro Bibs are our most durable pants, developed for mountaineers with high requirements to excessive durability, innovative functionality, and high-performance weather protection.

The trollveggen Gore-Tex Pro Bibs are our most durable mountaineering pants and the first choice of alpine adventurers who climb under harsh conditions. Made to offer big mountain perfection, these high-rise bib pants have never rested on their laurels but continuously been perfected to meet the needs of alpine explorers.

Engineered to withstand wind, water and abrasion, we've used very durable and recycled 70D X160D Gore-Tex fabric. The Vectran reinforcement on the lower leg will reduce wear and tear from crampons, and thanks to the detachable gaiters and zipped lower leg gusset you can easily customize the pants to fit your needs for both summer climbs and lightweight rando boots.

We've improved the ergonomic leg and seat construction, creating an ergonomic S-shape to improve movement and decrease excess fabric. By moving the seams to the front, we've managed to build a joint-like cap function to the knee area increasing both comfort and mobility. The drop seat function does not only facilitate effortless toilet visits, but also provides great ventilation thanks to the two-way zippers.

Other key features include a stretchy back, adjustable suspenders, a thigh pocket and front bib pockets which conceals an adjustment cord which can tighten the waistline if needed.

trollveggen Gore-Tex Pro Light Jacket M's

1605-22

€ 649.-

Our lightest, durable waterproof mountaineering jacket.

This lightweight mountaineering jacket is made for demanding alpine climbing but works perfectly for all-season mountaineering adventures including trekking and ski touring. We use A Gore-Tex® Pro fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

This jacket is made in a 3L 40D Gore-Tex® Pro most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. It is reinforced with 3L 70D Gore-Tex® Pro (RET 6) fabric with 100% recycled nylon face to ensure maximum protection on the top hood, shoulders, and elbow panel.

Main features include a storm hood fitted for a climbing helmet with one-hand adjustment, asymmetric cuffs with Velcro® adjustments, two-way under-arm ventilation, strategically placed napoleon pockets to avoid interference with harness and backpack, and a two-way front zip for flexible ventilation.

The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection.

trollveggen Primaloft100 Zip Hood M's

1620-19

€ 329.-

Developed for demanding ascents and descents in harsh alpine environments, the trollveggen Primaloft100 Zip Hood is our most technical and durable hooded insulation jacket.

Introducing the revolutionizing, recycled Primaloft Gold Aerogel insulation, the jacket offers an outstanding warmth-to-weight ratio. Aerogel is known as the world’s lightest solid, and with the Primaloft Gold Aerogel, they’ve managed to utilize its great insulation properties into outdoor gear.

To ensure maximum performance, we’ve mapped out different key areas of the upper body and used this to place extra insulation where it's needed. The outer fabric is a durable, lightweight rip-stop nylon Cordura ideal for rough surfaces and is highly windproof and water repellant.

This creates a jacket that can take a hit as a standalone outer-layer as well as a warm and protective mid-layer. Practical features include a wind hood which fits a climbing helmet, hand warming pockets with extra insulation thanks to the quilted front, inner pocket and longer cut back to prevent gaps.

This down-like product is the go-to mid-layer for any mountaineer with no room for compromises.

trollveggen superlight down850 Jacket W's

1607-21

€ 399.-

The world’s lightest down jacket with pockets.

The main fabric is a hightech, windproof, and extremely light 100% recycled 7D nylon material made in Japan. It offers great packability and lightweight, and is durable for its weight. To achieve an excellent warmth-to-weight ratio, the jacket is filled with high-quality, RDS-certified 850 goose down.

This jacket came to life as we wanted to create the ultimate down sweater made to give max warmth and packability-to-weigh in a minimalistic and adaptable package. You can use it both as a mid-layer and outer layer, making it a 4-season garment. Features are kept minimalistic and clean to follow the design expression.

The jacket has a slim fit with a longer cut in the back for extra protection. The Y-shaped fit ensures good mobility. To ensure an even and lasting distribution of down, it's tightly quilted.

trollveggen Powerstretch Pro Zip Hood W's

1627-19

€ 239.-

The durable trollveggen Powerstretch Pro Zip Hoodie is our most technical and flexible mid-layer designed for mountaineering activities.

The trollveggen Powerstretch Pro Zip Hoodie is a flexible and comfy insulation layer made for alpine adventures where both the altitude and temperature tend to switch between high and low.

The unique mix of polyester/wool blend and Powerstretch Pro provides the product with great properties; the polyester/wool under the arms and in the back has a great thermal regulation, odor reduction and will keep you warm even when wet.

The highly durable Powerstretch Pro material will withstand a great deal of wear and tear and provides quick-drying properties. It has a snug and ergonomic fit to maximize mobility in steep and difficult terrain.

Other key features include cuff with horizontal thumb hole for comfy fit, 4 pockets; two on the side and two on the chest, a protective hood that can fit underneath a helmet and easily is used together with a harness..

Material	57% recycled polyester, 33% nylon, 10% elastane
Material 2nd	76% recycled polyester, 18% wool, 6% elastane

trollveggen Thermal Pro Jacket W’s

3032-16

€ 199.-

The classic trollveggen Thermal Pro Jacket is our most durable mid-layer with the best warmth to- weight ratio in our mountaineering range.

With a retro design and great durability, it will stand the ravages of time and grow to be a favorite.

Thanks to Polartec® Thermal Pro fabric, the pill-resistant fleece has superb warmth-to-weight ratio and ensures high insulation. It also keeps the weight to a minimum and is strong and flexible to maximize mobility in steep and difficult terrain.

Other practical features include two hand warming pockets, a neat chest pocket, integrated hand gaiters, and a warm and weather protective collar. It’s the perfect choice for cold alpine adventures and performs perfectly on other outdoor endeavors when the temperature lowers.

trollveggen Thermal Pro Vest W's

1626-22

€ 159.-

Our warmest, most durable mountaineering vest.

This flexible vest is developed for mountaineering activities and is a great choice for general outdoor endeavors when the temperature lowers. It’s made in premium Polartec® Thermal Pro® because of its superb warmth-to-weight ratio.

Polartec® Thermal Pro® offers unique knit techniques to create air pockets that trap air and retain body heat, providing outstanding warmth without weight. Not only are they very comfortable, but these fabrics offer excellent breathability, dry quickly, and are very durable and pill-resistant.

Key features include two hand warming pockets, a chest pocket, and a warm and weather protective collar.

The vest has a regular fit with a slightly longer back for extra protection.

trollveggen warmwool2 stretch Tights W's

1629-19

€ 169.-

The highly stretchable and functional trollveggen warmwool2 stretch Tights are our most durable mid-layer tights ideal for mountaineering.

The trollveggen warmwool2 stretch Tights are highly functional tights ideal for alpine adventures where both the altitude and temperature tend to switch between high and low.

The unique polyester/wool mix provides great thermal regulation, impeccable comfort and natural odor reduction. The full-length zippers make them super easy to take on and off, and are color coordinated to prevent loss of valuable time trying to match them up.

The tights have an athletic fit, following the joints and the movements of climbing to ensure maximum mobility. Due to the durable material mix, they can be worn as a solo layer on warmer days and we can highly recommend them as a downtime snug pant for lazy days

The tights also have a thigh pocket with zipper and flexible waistband. Men’s have a fly with zipper.

Norrøna training Pants M's

5233-21

€ 219.-

Our most versatile training pants for colder conditions.

The main fabric is a light, durable, and stretchy 50D recycled double weave fabric with good breathability. To provide enhanced durability and extra protection during colder conditions, we've added a windproof and highly water repellent recycled stretch knitted fabric. This laminated fabric is running from the waist and down and will keep the weather out.

These super comfy, semi-fitted jogger pants are made for all kinds of outdoor activities. They are super versatile and will be just as good for more intense activity as a chill-out piece. It's a hybrid between cross country pants, running pants, and general outdoor pants, making it the complete all-purpose training pants.

These pants have a technical, quite slim fit and follow the timeless, clean design expression in our Norrøna collection's casual aesthetic. Articulated knees for easy movement and less bulk at the back of the knee. Gusseted crotch and an extra layer for extra protection in the crotch.

Other features: pull on solution with no front zip, elasticated waist with cord adjustment, zipped front pockets, zipped back pocket, zipped lower legs for easy entry/exit, elasticated cuff hem, reflex prints, low bulky seams.

Material	43% recycled nylon, 43% nylon, 14% elastane

Trail Running

Inspired by the lines of nature, the senja collection consists of timeless products that are easily packable, weather protective, and have exceptional moisture management.

senja

The island of Senja was the perfect inspiration for a trail running collection. Its diversity of terrains and energizing beauty inspired us to create a collection that would work for all the unique pathways found in nature. The design function behind all senja products are the same – to make timeless items that will allow a runner to keep their focus purely on nature.

NEW

senja Gore-Tex Active Jacket M's

5803-23

€ 549.-

Our most protective trail jacket.

The senja Gore-Tex Active jacket is made for trail runners, but is really perfect for any activity that gets your pulse on the rise. Packable, waterproof, and highly breathable, the face fabric is 100% recycled Nylon 20 denier fully equipped with laminated Gore-Tex Pro® Active for superior lightweight durability.

Designed with loaded minimalism in mind, this incredibly light jacket has double ventilation openings and a large hidden mesh exterior on the upper back so you'll be able to stay cool and release moisture buildup as you run through nature's maze.

Main features include: A hood that can be securely packed away when not in use, chafe-free linings and logos, the option to keep the face of your watch exposed for reading stats, elasticated cuffs, and a sleek adjustable hem. The jacket is also equipped with a zippered back pocket with a concealed belt. When turned inside out, the pocket becomes a pack to store the jacket in and attach around your waist when not in use.

This jacket has a slim ergonomic fit.

senja warm1 Hood M's

5818-23

€ 189.-

Our best mid layer to have mid trail.

The senja warm1 Hood fleece is ideal for those days that pack a powerful chill. The perfect fleece for trail running, but it can and should be used for any activity you need a bit of extra warmth without the threat of overheating.

Made with 100% recycled knitted Polyester, this fleece has an excellent weight-to-warmth ratio and superior durability to withstand abrasion from branches, bushes, and packs.

The fabric on this mid layer has been treated with HeiQ Fresh FFL anti-odor treatment. HeiQ Fresh FFL is a bio-based amino sugar polymer that is silver-free and not an antimicrobial. It removes the fat and protein from sweat, thereby eliminating the ability of the bacteria to grow.

Main features include: A technical fitting hood that shields both your neck and head. A spacious zipper pocket on the chest for easy access to energy bars or gels. A mid length zipper in the center for quick ventilation and effortless to take on and off. And stretchy elastic cuffs with thumb holes to keep your sleeves securely in place.

senja equaliser stretch Tights W's

5808-23

€ 179.-

Our most seamless and protective tights for your trail.

So stretchy and comfortable, you'll likely have to look down to double check you've put on your tights.

Curated for trail running, but can and should be used for every activity that demands your full range of motion.The senja equaliser stretch Tights are made with true seamless construction. These flexible and highly breathable tights are fully treated with 3XDry for superior moisture management and water repellency. Crafted with 65% recycled Nylon and 35% recycled Elastane, this product meets our bold sustainability goals.

Durable enough to withstand your toughest trails, the no see-through stretch will keep you protected in full ranges of motion. Main features include: Sophisticated reflective logos for your safety, stretchable open pockets for easy access to energy bars and gel packs. An internal security hook for your keys and valuables. Elasticated, chafe-free hems so you can wear them for hours with zero irritation. And lower bottom zippers that make the tights easier to slip in and out of.

These tights have a slim fit.

Mountain Biking

Rain and rough terrain demand functional clothing that will keep you warm and dry without sacrificing range of motion. Norrøna's collection for mountain biking anticipates every weather condition, so you can keep your focus purely on nature.

fjørå

singletrack mountain biking

Named after the little village on the West coast of Norway, where sheep have crafted fantastic trails from the summit to sea. The fjørå line consists of flexible, breathable, and technical mountain bike products engineered for singletrack challenges in rough terrain. Offering a year-round product line, the fjørå collection ranges from insulated jackets to super lightweight shorts and shirts – all designed with a freeride spirit in mind.

NEW

fjørå Gore-Tex Pro Jacket M's

2205-23

€ 649.-

A must have for year-round biking.

The fjørå Gore-Tex Pro Jacket was created to let you enjoy your ride wherever and whenever. The jacket's main material is GORE-TEX PRO® 40D for ultra-light durability. We use GORE-TEX® PRO fabric because of its world-leading quality for durable waterproofness (28,000mm), optimized breathability, and total windproofness.

Additional smart design features include: A knuckle protector that will help safeguard your hands, that can be hidden when not in use. A rain channel on the hood that will trap water and redistribute it to avoid view obstruction. A draw string on the back of the hood that quickly allows you to adjust both the height and circumference of the hood to your liking. And pragmatic reflex stripes and reflective logos for your safety.

This jacket has a technical fit that gives enough room in the arms for protective elbow pads.

Baselayer

Premium baselayer made in ultrafine, 18,5 merino wool knitted and sewn in Europe.

Norrøna pureUll Zip Neck M's

5270-21

€ 139.-

Premium 100% merino wool baselayer zip neck.

This lightweight wool zip neck is perfect for all outdoor activities, and also suitable for everyday use because of its clean design. It is made in our own pureUll wool, a premium 100% merino quality that provides great thermal properties, comfort and breathability.

The pureUll is an all-natural material made in 100% ultra-fine 18.5 wool micron that offers the perfect balance between performance and non-itching next-to-skin softness. It's a medium-weight (180gr/sqm) single jersey knit which is highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging.

The natural properties of the wool offer great benefits: It is temperature-regulating, retains body heat while transporting moisture away effectively keeping you warm, even when wet, and is also natural odor-resistant. The wool is RWS certified, and it's sewn and knitted in Europe.

Key features include a high, snug collar and a half zip front. The fit is technical and it has articulated arms for good mobility.

Packs

High-quality packs made of 100% recycled materials developed to accompany all our favorite activities perfectly.

norrøna 120L Trolley Bag

5253-21

€ 279.-

Our staple, durable and highly weather resistant trolley bag.

The main fabric is a super durable ECONYL® 450D with a 2000 mm PU coating. The bottom is made in a heavy-duty 900D ECONYL® with a 2000 mm PU coating – the most durable quality of our ECONYL® range. The ECONYL® regenerated nylon is a product contributing to closing the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators, and consumers. The bag has 85mm wheels, which roll easily.

This clean and featured trolly bag offers excellent protection and comfortable transportation and storage for your stuff. It has a minimalistic and characteristic Norrøna design with aluminum hooks and tone-in-tone logos. Instead of the regular telescope handle, we've placed two diagonally handles on the top, which ensure comfortable rolling and prevent the bag from hitting the back of your legs. This also enables easier storage, as you can roll it all the way down since there's no hardware in the back.

It can also be carried as a backpack with its adjustable, padded shoulder straps. These can easily be hidden away when not in use in an "invisible" slit in the front. The front RC zipper is close to full length and provides easy access to all your belongings.

The bag has one big main compartment, with a mesh pocket on each side. It also has a front pocket with a little mesh compartment with a key hook, and on the top, there's a small pocket for business cards or ID papers of some sort.

The back and side are soft padded, and it has a plastic bottom – with a handle for lifting – to achieve extra support and make sure it keeps its shape. The sliders on the zippers are kissing sliders so that you can add a little padlock for extra security. On the top, front, and sides, several handles make it easier to lift and move it around. The T-shaped zipper pullers provide a better grip, perfect if you're wearing gloves or mittens.

norrøna 90L Duffel Bag

5260-21€ 189.-

Our staple, durable and highly weather resistant 90L duffel bag.

The main fabric of his minimalistic duffel bag is a super durable 450D ECONYL® with a 2000 mm PU coating. The bottom is made in a heavy-duty 900D ECONYL® with a 2000 mm PU coating – the most durable quality of our ECONYL® range. The ECONYL® regenerated nylon is a product contributing to closing the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators, and consumers.

This clean duffel bag offers excellent protection and comfortable carrying and storage for your stuff. It has a minimalistic and characteristic Norrøna design with aluminum hooks and tone-in-tone logos.

It can easily be carried as a backpack with its adjustable, padded shoulder straps and chest strap, but it also has two front handles, plus a top handle. You can also create a smart single-strap solution by binding the two shoulder straps together using the chest strap. The T-shaped zipper pullers provide a better grip, perfect if you're wearing gloves or mittens.

The durable RC WR zipper runs almost all the way across, giving a big opening with easy access to the single compartment. The sliders on the zippers are kissing sliders so that you can add a little padlock for extra security. It can be compressed by using the end hooks on each side.

norrøna 70L Duffel Bag

5259-21

€ 179.-

Our staple, durable and highly weather resistant 70L duffel bag.

The main fabric of his minimalistic duffel bag is a super durable 450D ECONYL® with a 2000 mm PU coating. The bottom is made in a heavy-duty 900D ECONYL® with a 2000 mm PU coating – the most durable quality of our ECONYL® range. The ECONYL® regenerated nylon is a product contributing to closing the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators, and consumers.

This clean duffel bag offers excellent protection and comfortable carrying and storage for your stuff. It has a minimalistic and characteristic Norrøna design with aluminum hooks and tone-in-tone logos.

It can easily be carried as a backpack with its adjustable, padded shoulder straps and chest strap, but it also has two front handles, plus a top handle. You can also create a smart single-strap solution by binding the two shoulder straps together using the chest strap. The T-shaped zipper pullers provide a better grip, perfect if you're wearing gloves or mittens.

The durable RC WR zipper runs almost all the way across, giving a big opening with easy access to the single compartment. The sliders on the zippers are kissing sliders so that you can add a little padlock for extra security. It can be compressed by using the end hooks on each side.

senja econyl70 7L Pack

5801-23

€ 229.-

Ahead of the pack.

One of the first fully recycled products of this kind on the market, the senja econyl70 7L is ready to take care of all your necessities so you can keep your focus purely on nature. Made for trail running, though it can and should be used for all of your longer adventures in nature.

The exterior of this hydration aid is made with a highly durable and water repellent recycled Nylon, while the interior has been outfitted with 100% recycled mesh for cooling breathability.

This pack is packed with incredibly useful features. The two soft 500 mL norrøna soft flasks included can be easily stored in the easy to reach front pouches. And there is space for extra water storage in the back as well. All exposed zippers have been laminated for extra water repellency to increase the packs overall water repellency.

In addition to three zipper pockets, there are open pockets at the sides for easy access to energy bars or gel packs. There are also storage functions in both the front and back to hold your running poles when not in use. The smart design has been outfitted with two adjustable 10mm double straps with quick release snaps and drawstrings at the waist to guarantee a custom fit.

The sleek outside stylishly conceals interior features including: A hidden safety flute, extra pockets for storage, and an attached hook to keep your keys and valuables safe.

This pack has a slim, customizable fit.

falketind econyl70 28L Pack

1809-23

€ 199.-

Our most versatile daypack for everyone.

The falketind econyl70 28L Pack was specifically developed for mountaineering. Though it can and should also be used for any season, all weather adventures. Made with 100% recycled ripstop Nylon for extreme lightweight durability.

This highly functional pack is loaded with storage and designed with easy accessibility in mind. The pack has a spacious main compartment, an extra large top compartment for your mountaineering gear, sectioned compartments for items you want to isolate from the rest of your belongings. And an easy to reach bottom compartment that is perfect to stash your extra layers in.

Main features of the daypack include: A ventilated mesh fabric on areas that touch the skin to prevent moisture buildup. A dedicated hydration pocket connected with a sleeve down the carrying strap. An integrated weather protective helmet net that can be mounted on both the front or underneath the pack. An internal safety pocket with a key hook to protect your valuables. And a cushioned harness with wing support.

fjørå econyl195 18L Pack

2201-23

€ 249.-

A single track pack that does it all.

The fjørå econyl195 18L Pack is the birth child of all the knowledge we've gained from making activity packs in the past. The perfect pack to strap on for all your biking adventures. Though it is also incredibly useful to have for all of your other favorite outdoor activities.

The clean design is fully prepared for rugged terrain as it is mainly constructed with durable 100% recycled ripstop Nylon fabric that has undergone years of testing in the harshest of weather conditions. We have also used 100% recycled Polyester mesh in all interior surfaces that touch the skin for extra breathability, recycled foam, and sustainable zippers to meet our bold sustainability goals.

Main features of the pack include: Two main compartments that are big enough to store all of your biking tools, protective gear, and extra layers in. In addition, there are multiple smaller pockets that keep organizing your freeride essentials a breeze. A foolproof waist strap to help with weight distribution and easy to adjust straps for a more custom fit. A helmet attachment on the hip belt. Strategically placed reflective stripes and logo for your safety, and incredibly comfortable adjustable shoulder straps that allow the pack to sit nearly unnoticed on your shoulders.

D30 removable Back Protector

9601-18€ 65.-

D30® removable back protector for the skibotn 15L pack and the fjørå 18L pack.

D30® removable back protector for the skibotn 15L pack and the fjørå 18L pack. D30® core patented technology is based on non- Newtonian principles.

In standard conditions, the polymer chains on a Non- Newtonian fluid flow freely, allowing the material to remain soft and flexible but on impact, they lock together dissipating the impact energy, reducing the force transmitted. This event lasts milliseconds; the polymer then instantly returns to its flexible state. The D30® patented technology incorporates this Non- Newtonian into other polymers for a rate sensitive solution.

The falketind Infinium short Glove is a lightweight glove that offers great mobility and protection.This glove is windproof, which makes it a great option for dry weather days when you will need protection and comfort for a wide range of outdoor activities.

Our main goal was to create a unique glove that goes in line with the rest of the falketind design expression. Here, you will get a fitted glove with a pre-shape fit, which is easy to take on and off.

We use a stretch softshell as main material with a durable outer and a next-to-skin comfort interior. The palm is made in soft and smooth Sheep leather, which offers great grip and dexterity. The reinforced fingertips ensure that you will have these durable, favorite gloves for years and years.

Water Repellent Tech 400mL (12 pack)

9605-16 € 252.-

0000
Tech

Eco friendly water repellent for technical materials.

This product preserves the breathing of technical materials and enhances the repellency of water on the fabric. This is a great Eco-friendly alternative to other water repellents out in the market. Can be used on Gore-Tex, dri and other technical fabrics.

- Instructions:
- Clothing article should be clean and dry.
 - Shake bottle well before use.
 - Spray the article as evenly as possible.
 - Let the waterproofing soak in for 15-20 minutes.
 - Dry off extra waterproofing with a damp cloth.
 - Dry the article with help of a warm iron, warm air, sunlight or similar. Washing directions for the fabric MUST be followed.
 - Empty, clean, and close the spray nozzle if you will use the bottle again.

If the waterproofing is not sprayed on evenly, the article can become discolored. This is easily removed by washing.

The products are free from fluorocarbons and do not contain propellants that contribute to global warming or CFC gasses that destroy the ozone layer.

Water repellant natural 400 ml – Made for wool, cotton and polyester blends.

- Instructions:
- Clothing article should be clean and dry.
 - Shake bottle well before use.
 - Spray the article as evenly as possible.
 - Let the waterproofing soak in for 15-20 minutes.
 - Dry off extra waterproofing with a damp cloth.
 - Dry the article with help of a warm iron, warm air, sunlight or similar.
 - Washing directions for the fabric MUST be followed.
 - Empty, clean, and close the spray nozzle if you will use the bottle again.

If the waterproofing is not sprayed on evenly, the article can become discolored. This is easily removed by washing.

The products are free from fluorocarbons and do not contain propellants that contribute to global warming or CFC gasses that destroy the ozone layer.

Size and Fit Guide

The fit will describe the width of the body and arms of jacket. Arm length, and jacket length is not influenced by the fit.

Men's jackets Outer/Shell

Metric

Slim
Tight fit

Typically made for high intensive activities like running and biking. This fit is made to follow the body shape, and create a minimal room between the body and the jacket. Works best with layers that also have a slim or technical fit, not room for a lot of extra stuff under the jacket.

Fit under the jacket
Thin midlayers, think insulation.

Typical products
Light shell jackets, light wind jackets and light softshells

Technical
Fitted fit

Typically made for mountain biking or mountaineering/ climbing activities. The fit is made for perfect balance between allowing multiple layers underneath, but the jacket should not restrict movements or view when climbing or mountaineering.

Fit under the jacket
Different thickness of mid layers or down synthetic insulation. Preferably with Technical or regular fit.

Typical products
Shell jackets, wind jackets and softshells.

Regular*
Normal fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Shell jackets, insulated shells, wind jackets and insulation.

Relaxed
Loose fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Thicker shells, insulated shells and insulation.

Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Shell jackets, insulated shells, wind jackets and insulation.

Relaxed
Loose fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Thicker shells, insulated shells and insulation.

Men's Lower body

	Metric					
Measures	XS	S	M	L	XL	XXL
Body Height	166 - 174	170 - 178	174 - 182	178 - 186	182 - 196	184 - 200
1. Waist ?	71 - 77	77 - 83	83 - 89	89 - 95	95 - 101	101 - 107
2. Seat ?	77 - 83	83 - 89	89 - 95	95 - 101	101 - 107	107 - 113
3. Inside leg length ?	77 - 79	79 - 81	81 - 83	83 - 85	85 - 87	87 - 89

Women's pants Outer/Shell

Metric

Slim
Tight fit

Typically made for high intensive activities like running and biking. This fit is made to follow the body shape, and create a minimal room between the body and the jacket. Works best with layers that also have a slim or technical fit, not room for a lot of extra stuff under the jacket.

Fit under the jacket

Thin midlayers, think insulation.

Typical products

Light shell jackets, light wind jackets and light softshells

Technical
Fitted fit

Typically made for mountain biking or mountaineering/ climbing activities. The fit is made for perfect balance between allowing multiple layers underneath, but the jacket should not restrict movements or view when climbing or mountaineering.

Fit under the jacket

Different thickness of mid layers or down synthetic insulation. Preferably with Technical or regular fit.

Typical products

Shell jackets, wind jackets and softshells.

Regular*
Normal fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket

Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products

Shell jackets, insulated shells, wind jackets and insulation.

Relaxed
Loose fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket

Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products

Thicker shells, insulated shells and insulation.

Technology and Materials

Learn more about the technology and material we use in our products and how we rate our product's performance.

Waterproof fabric

Gore-Tex® Pro most rugged is the most durable option designed for the harshest conditions, using a special high strength membrane, while maintaining durable waterproofness. It comes with a solution dyed woven GORE micro grid backer (plain weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. It's the ultimate storm protection fabric. RET less than 13.

Gore-Tex® Pro most breathable is designed for extreme breathability to minimize moisture build up. Using a special air permeable membrane with durable waterproofness, it improves your base layer's drying time to ensure comfort in demanding conditions. It comes with a solution dyed woven GORE micro grid backer (ripstop weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. The ultimate storm protection fabric. RET less than 6.

Gore-Tex® fabrics are durable, waterproof and windproof, combined with optimized breathability—ensuring products that maximize protection and comfort for the user. Waterproof: 28,000mm. Breathability: Extremely good, RET 3-6.

Gore-Tex® Active is waterproof, extremely breathable, and windproof. Low weight, low volume, soft and easy to pack, Gore-Tex® Active is good for more aerobic activities where you need protection from rain and wind. RET less than 3.

Gore-Tex® 3-layer has a unique 3-layer construction made for year-round use and a wide range of outdoor activities. It has a special Gore-Tex® membrane, bonded to a highly breathable outer material and an incredibly comfortable interlock knit inner lining. The benefit: comfort in warm and cold weather and no movement between the three layers, which means less wear and tear, and even greater durability. RET less than 6.

Gore-Tex®C-KNIT™ Backer Technology is specifically engineered for hikers, trekkers, and freeriders – optimizing comfort while providing durable, waterproof and windproof protection. The reliable and proven bi-component Gore-Tex® membrane system is bonded to an extremely thin, dense yet lightweight circular knit to form a patent-pending laminate. Weighing up to 10 percent less than previous 3-layer Gore-Tex® fabric, this new laminate improves breathability by as much as 15 percent in a less bulky, more robust 3-layer construction. The smooth texture of the knit backing is soft to the touch, and makes the garment easier to slide on and off over other layers. RET less than 6.

Gore-Tex® Shake Dry The new Gore-Tex® Shake Dry fabric durably protect against the weather and reduce sweat accumulation in high aerobic activities. Uniquely designed, the technology eliminates the face fabric, preventing absorption of water in order to maintain comfort in high aerobic activities. Garments will retain these attributes during use, wearers will not experience the chilling effect that can result from a wetted out face fabric, and the garment dries out fast. The excellent balance of protection and comfort allows the wearer to leave the garment on – rain or shine. RET less than 3.

Read more at [goretex.com](https://www.goretex.com).

dri™1 A super comfortable 2,5 layer offering full weather protection and high breathability. Stretchy, non porous, hydrophilic membrane utilizing a stretch woven face fabric and a printed PU membrane with quick drying technology. dri™1 for gloves: Waterproof, breathable insert.

dri™3 A super comfortable combination of full weather protection and the comfort of highly breathable lamnats. dri3 is non porous, woven face fabrics, a PU membrane featuring a quick drying micropolyester backer. Specifications: Waterproof: 20,000mm. Breathability: Very Good, min. 20,000. Windproofness: 100%. ISO811-test. JIS-L 1099 B1-inverted cup test.

Wind resistant shells

Gore-Tex Infinium™ membrane is an ultra-thin weather protective layer which is laminated to various textile layer. Products made with Gore-Tex Infinium™ fabrics are totally windproof, highly water repellent yet deliver maximum breathability to keep you comfortable in cool and windy weather conditions. This combination of protection and breathability minimizes the wind's chilling effect while reducing the risk of overheating when you are active. Read more at [goretex.com](https://www.goretex.com).

aero 100™ is a super lightweight and technical polyamide fabric which offer excellent breathability (around 100 Mbar/l/m2/s). It is soft, water repellent and wind resistant with a weave construction designed to improve moisture vapour transportations during aerobic activities.

Softshells

flex™1 is a single ply stretchy fabric that provides wind and water repellence while allowing improved moisture vapor transportation rates compared to waterproof products. These specially designed fabrics have all the attributes we expect in a Soft Shell: stretch, water resistance, wind resistance and excellent moisture vapor transportation.

flex™3 is a 3-layer soft shell fabric that provides wind- and water-resistance while still allowing great moisture vapor transportation – perfect to use as a reinforcement fabric The face is made of durable nylon and backer wickable polyester.

Insulation materials in outerwear

PrimaLoft® is a patented microfiber, that gives great thermal insulation to help the body maintain its temperature, minimizing energy loss. Extremely light, water repellent, soft and compressible, and originally developed by the US Army to replace natural down. As down absorbs moisture, it becomes wet and loses its thermal-insulating abilities. PrimaLoft® absorbs three times less water, is 14% warmer when dry and 24% warmer when wet, than the competitive insulation. Read more at [primaloft.com](https://www.primaloft.com).

Polartec® LLC is the developer, manufacturer, and marketer of Polartec® performance fabrics. Polartec® products range from lightweight wicking base layers, to insulation layers, to extreme weather protection and are utilized by the best clothing brands in the world. Read more at [polartec.com](https://www.polartec.com).

Polartec® Thermal Pro® creates air pockets that trap air and retain body heat, providing outstanding warmth without much weight. These fabrics offer excellent breathability and dry quickly.

Polartec® Power Stretch® is a breathable, body-hugging, 4-way stretch, one-side fleece designed to keep you drier when you sweat and provide warmth without added weight. Outside face is smooth to provide better freedom.

Polartec® Power Stretch® Pro™ has the ability to retain warmth without restricting movement or agility during activities. The outer surface has a low-friction finish to reduce irritation when worn with other fabrics and increase overall abrasion resistance. This next-to-skin layer stays dry, breathable and comfortable by continuously transferring moisture vapor for rapid evaporation.

Polartec® Micro fleece fabric provides versatile thermoregulation that sustains lightweight, breathable and fast drying characteristics.

Polartec® Alpha® starts with a highly efficient insulation fabric, which is based on the Polartec® Thermal Pro® High Loft technology platform. This technology is uniquely suited to create warmth without weight, and exceptional breathability, compressibility and dry times via high loft fibers in a low density knit. Current market synthetic insulations are not breathable enough to handle the "go" phases of most backcountry pursuits. They are typically additional garments that must be carried for use during static period. Polartec® Alpha excels at providing comfort for users on the move.

Polartec® Power Dry® pulls moisture directly from the skin and transfers it to the outer surface to quickly dissipate. This continuous evaporation process helps to keep you cool (as your body heat increases) and warm (when temperatures begin to drop).By physically embedding these wicking capabilities into the fabric structure, Polartec® Power Dry® doesn't rely on chemical fiber treatments to transfer moisture. Chemical approaches to managing saturation only provide a temporary solution that can wash away and leave you with a base fabric that doesn't perform.

Polartec® Power Grid is a patented grid design structure which reduce fabric weight while increasing warmth and compressibility.

Polartec® Power Wool™ is a design breakthrough for combining the distinct advantages of natural and synthetic fibers in a bi-component fabric. The industry standard of blending different yarns into a mixed composition reduces the intended benefits and hampers overall fabric performance. By isolating a merino wool interior and a synthetic fiber exterior we developed a hybrid fabric with distinct surface features to optimize wicking, breathability, odor resistance and durability.

Polartec 200 Series The classic midweight fleece. Polartec® Fleece is the original synthetic fleece, forever changing what we wear in colder weather. This now proven thermal knit technology delivers breathable performance, soft comfort and long-lasting breathability.

thermo40 "Thermo" is our general term for any synthetic insulation. It gives great thermal insulation to help the body to maintain its temperature, minimizing energy loss. We use synthetic insulation as an alternative to down, as it keeps its functionality even in wet conditions. While moisture is the weak point of down, synthetic insulation shows its strength during sweat-inducing activities, when being exposed to rain or under continuous humid conditions. Synthetic insulation provides a very good warmth-to-weight-ratio and is easy to maintain. The number behind Thermo refers to the weight in gr/sqm of the insulation used in the product. The suppliers of our synthetic insulation are Primaloft and Pinneco.

down™750 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™750 means down fill power from 750 to 800 cu in/oz with the percentage of down cluster from 93–96%.

down™850 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™850 means down fill power from 850 to 900 cu in/oz with the percentage of down cluster from 93–96%.

down™950 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™950 means down fill power from 950 to 1000 cu in/oz with the percentage of down cluster from 93–96%.

Insulation materials in mid layers

warm™1 Weighing under 200 grams/m², these are our lightest fleeces. Perfect as a mid layer, or wear it instead of a jacket without compromising on insulation and breathability. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warm™2 Weighing between 200 and 300 grams/m², these fleeces allow a good combination of warmth and moisture transportation. They provide more bulk and trap more air than our warm™1 fabric. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™1 Weighing under 200 grams/m², these are our lightest wool mix for brushed knits. The material composition mix emphasis the benefits from the natural performance from wool and the durability, low weight and wicking performances from synthetics, to combine the best of two worlds. Perfect as a mid layer, or as a baselayer without compromising on insulation and breathability. These knits are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™2 Weighing between 200 and 300 grams/m2, these are our mid-weight wool synthetic blends. They are bulkier and trap more air than our warmwool1 fabrics. The material composition mix emphasizes the benefits of wool's natural properties and the durability, low weight and moisture-wicking performances of

synthetics. These fabrics are among the best in the market, and their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Other materials/technologies

hiloflex™ Weighing between 200 and 300 grams/m2, theses double weave constructed materials provide a unique combination of warmth and weather protection. While many conventional fleeces are less durable due to their knit construction, the fabric has a much more durable surface due to its woven flat face. This makes it strong towards abrasion and keep the material wind and water resistant. A lofty interior provides great thermal properties with a good warmth to weight ratio. Thanks to an open construction, the fabric is highly breathable, and it offers a perfect balance between heat and comfort dynamic warmth. Stretch in at least one direction ensures very good mobility and comfort when being active.

Viking denim Our newly developed Viking denim is designed to combine sustainable, functional fibers with organic cotton creating a classic denim with enhanced functions. This innovative fabric is extremely durable, lightweight and flexible with quick drying moisture wicking capabilities. Blended perfectly into timeless designs, we're introducing a new generation of sophisticated outdoor apparel that works seamlessly wherever you're heading.

bio These materials biodegrade in specific environments under certain conditions, such as landfills and oceans, yet remain unchanged in the consumer's wardrobe. The ability to biodegrade is important once these fibers make their way outside of the closed loop and into the environment. This happens because fibers are broken down and released due to normal wear and tear and washing of a garment, or when a garment is not disposed of safely and finds its way into a landfill or ocean water.

viking grid300 is designed as reinforcement fabric with high cut resistance. It's mainly used as instep reinforcement in our ski pants to prevent that ski steel edges cause damage to the fabric. The innovative fabric is extremely durable, it is a synthetic woven in a 3L laminate construction combined with high-strength fibers in both directions, which makes it our strongest fabric in the collection. Due to a special yarn design it will keep its strength even if exposed to UV light. The surface is DWR treated for great water protection. The weight for this type of material 300g and above.

Organic Cotton is produced without the use of harmful pesticides, harsh chemical bleaches or dyes and is allergy-free. Today Norrøna uses 100% organic cotton in all of our cotton products.

BioNylon® is a highly sustainable bio mass fabric made of castor bean – a crop which requires just a fraction of arable-land. The production of the yarn allows a significant reduction of carbon dioxide in addition to considerably reduce CO2 during the dyeing process. The fabric offers the usual assets of PA such as hard-wearing properties, good flexibility and comfort, but with a shorter drying time.

PFC-free Products marked with “PFC-free” are not treated with a DWR that contains PFC (polyfluorinated chemicals). We are working determinately to phase out PFC from all of our products, but it is difficult to find an alternative that satisfy our quality demands.

DWR Durable Water Resistant finish to prevent surface saturation of the textiles. Contains of short chain fluorocarbon based C6.

MulesingFree Mulesing is a controversial surgical procedure removing wool-bearing skin from the tail and breech area on sheep to prevent fly infestation. The process is usually done without any without anaesthetisation and can be extremely painful. As a part of our animal welfare commitment, we only source traceable wool from sheep that have been treated well and not been mulesed.

ePTFE™ Expanded polytetrafluoroethylene, or ePTFE, is the core material in many of Gore's solutions. An ePTFE membrane is created when PTFE — a linear polymer consisting of fluorine and carbon molecules — is expanded, creating a microporous structure with very desirable characteristics, including a high strength-to-weight ratio, biocompatibility, high thermal resistance and many others. ePTFE is inherently waterproof, windproof and chemically inert, and each ePTFE membrane is adjusted to maximize its inherent properties to meet those requirements. For instance, Gore-Tex® ACTIVE PRODUCTS offer superior water-beading for cyclists and other athletes wanting to reduce moisture accumulation, either from sweat or rain. For this application, the ePTFE membrane is engineered for maximum breathability — allowing sweat to vaporize — while repelling wind and rain.

PU (Polyurethane) is a laminated membrane or coating used on face fabric to provide waterproof yet ventilating properties. The membrane has tiny holes too small to let liquid water enter but large enough to allow water vapour to escape.

YKK Aquaseal® zipper is a watertight and water repellent product line. They are perfect for all sorts of gear where water and air tightness is a must. Smoother and more flexible, they offer optimum protection thanks to the film coated tape and the innovative zip element mechanism that seal the zipper completely. This is the first truly waterproof zipper provided on Norrøna products. Read more at [aquaseal.com](https://www.aquaseal.com).

equalizer1 A synthetic technology with next-to-skin comfort, used for baselayers such as technical t-shirts. The main function is to wick moisture and spread it to a larger area to be able to dry quickly for increased comfort and performance. Other characteristics are good UV protection, low weight, soft touch and durability.

Pertex® uses incredibly fine yarns, precisely woven to provide a very lightweight yet strong and durable fabric. Its softness allows down and synthetic insulation to fully loft, while the downproof construction prevents the down from leaking through the face. The fabric is windproof. Our products use different variations, such as Quantum, Classic and Microlight These have the same fundamental characteristics but vary on weight.

Pontetorto A world renowned mill from Italy founded 1952. Specialized in technical knits/fleeces with highest quality.

Cordura is the brand name for a collection of fabrics used in a wide array of products. Cordura fabrics are known for their durability and resistance to abrasions, tears and scuffs. Cordura fabrics are usually made of Nylon 6.6 High Tenacity, but may be blended with cotton or other natural fibers.

Pittards Established in 1826, Pittards has been making high quality leather in England for almost 200 years. Pittards technical expertise of performance leathers. Incorporating technical qualities such as resistance to water, abrasion, and staining, We use Mainly goat and sheep leather for a great balance between function and tactile feel.

Clarino Manmade synthetic like material, used in gloves. Made by Kuraray Co., Ltd of Japan. During manufacturing it is microscopically perforated to give it breathability similar to that of natural leather. Clarino is based on a non-woven fabric composed of special synthetic fibers that are intertwined three-dimensionally. The material's softness and suppleness arise from the structure of the non-woven fabric's special fibers—a superfine fiber construction and tiny cavities. Superb durability, softness when wet and allow a close fit with great tactility is main characteristics of the quality.

ECONYL® yarn is a 100% regenerated nylon yarn derived from pre and post consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway). The aim of this process made by Italian company Aquafill is to give a new life to all kind of waste in order to make our environment cleaner. All new Norrøna backpacks from FW1920 are made from ECONYL® yarn.

Zxion® A polyester fiber with high tensile strength and great elasticity. It has excellent heat resistance, acid resistance, resistance to cutting, vibration damping property, and low water absorption.

Carrying systems

integral™ is a solid, anatomical carrying system for moderate loads, up to 15 kg. Emphasis is placed on hip movement, weight distribution and practical solutions. Consisting of a laminated back with a vertical aluminium bar, it makes a classic yet sturdy carrying system, that can also be shaped after your back.

dynamic™ Our carrying system without aluminum support bars or frames. We use these systems on many of our small packs where flexibility is a key factor.

CSR Standards

GOTS stands for Global Organic Textile Standard and is constituted of four reputable organizations with expertise in organic (fiber) farming as well as environmentally and socially responsible textile processing and manufacturing. The standard stipulates requirements throughout the supply chain for both ecology and labor conditions in textile and apparel manufacturing using organically produced raw materials.

The Responsible Down Standard (RDS/RDS2.0) ensures that down and feathers come from ducks and geese that have been treated well. This means enabling them to live healthy lives, express innate behavior, and not suffer from pain, fear or distress. The standard also follows the chain of custody from farm to product, so consumers can be confident that the down and feathers in the products they choose are truly RDS.

The Responsible Wool Standard safeguards the welfare of animals and ensures that sheep are treated with respect to the Five Freedoms. Through the processing stages, certification ensures that wool from certified farms is properly identified and tracked. Farms participating in the RWS are audited annually by an independent third party certification body. As certified wool from these farms moves through the supply, the Textile Exchange Content Claim Standard is used to provide a chain of custody system to the final product. Each stage of production is certified to this standard by an accredited third party.

Norrøna uses RWS as a minimum standard for our wool. While we are trying to get all our suppliers to use RWS due to its international standard, over the past year we have found different degrees of compliance through the whole supply chain. As this is a new standard, we have found some of our suppliers having difficulty fulfilling the paper trail. In those cases where we can not fully verify the RWS standard we still rely on 3rd party verification to ensure traceability and full compliance with RWS standards.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability. For our wool products which do not currently have RWS certification, we can show robust 3rd party verification equal to our RWS certified.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability. For our wool products which do not currently have RWS certification, we can

show robust 3rd party verification equal to our RWS certified wool. All the wool we buy has a premium for the quality, sustainability and traceability to ensure us and our consumers of both and sheep and the lands wellbeing.

PFCec FREE stands for “Per and Poly-Fluorinated Chemical free of Environmental Concern”, which means that the water repellent treatment (DWR) of all products marked with “PFCec FREE DWR” does not contain PFCs which break down and dissolve into water, soil or air, and therefore do not harm the environment. Gore laminates with a PFCecFREE call out do not have surface PFC agents on both textile and membrane.

Gore is committed to continuously reducing the environmental footprint of their products while maintaining a high level of durability and performance. Gore has therefore set the goal of eliminating PFCs of Environmental Concern (PFCec FREE) by 2023.

OekoTex is an independent testing and certification system for raw, semi-finished, and finished textile products at all processing levels. To be certified all parts of an article must meet the required criteria – in addition to the outer fabric, for example, also the sewing threads, inserts, prints etc., as well as non-textile accessories, such as buttons, zip fasteners, rivets etc.

Bluesign The independent bluesign® system pursues the unique approach to minimize the environmental impact of materials throughout the production process. The so-called Input Stream Management ensures that all during the textile production process applied substances and raw materials are already verified in advance of the production. The system focus guarantees the application of sustainable ingredients in a cleaner process that reduces water and air emissions, improves its waste water treatment and generally reduces its ecological footprint.
