Workbook guide

How to navigate

To get back to the “content page” you can click on the Norrøna logo in the top left corner.

Content page

From the content page you can easily navigate to the activity or concept that you would like to go to, by clicking on the activity or concept. If you would like to go directly either to the Men’s or Women’s product pages, you can click on either of the genders.

When you are finished looking at one concept, you can go directly back to the content page by clicking on the Norrøna logo in the top left corner.

Material logos

In the product pages you can find material and fabric logos at the of the bottom right corner. To learn about what these logos mean, you can click on the logo. Then you will be sent to the “Technology and materials” pages with more information.

Product information

Each product page shows one product, with the different colors that exist for that product. If the color is new, you will see “New” at the top left corner of the product picture.

If the product is new, it is written “NEW” over the product name in the top right corner.

Sample size

On our model images, the male models are wearing size large and the female models are wearing size medium.

In the product description we have listed weight for all products, and inseam on shorts and pants. These numbers are based on our sample sizes.

Welcome to nature

There is something about this country, about my homeland of Norway. The fjords, the glaciers, the forests. The waves thundering against the rocky shores. The mountains towering above us. There is something about the Norwegian wilderness that brings out the adventurer in us. There is something about the climate here in the far north; up here, a single day can put us up against the challenges of four different seasons and still be a magical experience. As long as we are well prepared and are wearing the right clothing.

Way back in 1929, my great-grandfather, the young craftsman Jørgen Jørgensen, realized that Norwegians have a constant longing to be outside and deserve the best possible equipment. He developed products without compromise. He laid the cornerstone of what would become Norrøna, now a leading international supplier of outdoor gear.

Norrøna was behind the world's first tunnel shaped tent back in 1972. Norrøna launched Europe's first Gore-Tex jacket in 1977. And we unveiled an anatomical backpack as early as in 1980, functional and stylish clothing for steep freeriding in 2004, a separate collection for singletrack riding in 2008, and functional and sustainable wetsuits for arctic surf in 2017.

Norrøna has been part of expeditions to the North Pole and South Pole, Mount Everest and the Great Trango Tower in the Karakoram. Not to mention, Norrøna has been at the forefront of alpine style climbing in Alaska, Patagonia and Antarctica. Our ambassadors help push the envelope of what is possible in skiing and snowboarding, arctic surf, mountain biking, climbing and polar expeditions.

My great-grandfather, grandfather and father all believed that Norrøna had to create products with the best possible design, cutting-edge functionality and the highest quality. They believed that product development had to be driven by the bravest among us; those who dare to think new; those who take on extreme adventures. We still do.

Welcome to nature.

Jørgen Jørgensen

Fourth-generation owner and chief executive of Norrøna.

Our corporate responsibility

Nature is our playground, our motivation and our source of inspiration – it's the reason why Norrøna exists.

Environmental and social responsibility is a fundamental part of everything we do throughout the company. It is of the utmost importance that our value chain is ethically responsible and that our products are as environmentally friendly as possible. We have a goal of becoming a leader within the field in the outdoor industry and you can study our 2020 CSR roadmap on our website norrøna.com.

While a new Norrøna product is awesome, an old one maybe even more so. A long lifespan is one of the best tools to minimize a product's environmental footprint, so we've been offering repairs on all of our products since the beginning in 1929. By making high-quality gear that lasts for years and can be repaired, we make sure you don't have to buy new stuff. In 2018, we fixed over 10 600 products, an increase of 2000 from 2017.

Norrøna wishes to use as many recycled fabrics and materials when making a garment. This is a guiding principle when designing new products, and when buying fabrics and trims. We are constantly searching the market for high quality recycled fibers and per 2018 71% of our polyester products are made with at least 50% recycled fibers.

As animals have no voice in terms of their well-being, we see it as our obligation to ensure that all of our animal products originate from animals that are treated well and that the processes of retaining the

products are done without causing any harm. By making sure that all of our down products have the RDS (responsible down sourcing) down standard and using traceable, mulesing-free wool, we safeguard the welfare of animals and provide retailers and consumers with a greater confidence in responsible sourcing. As part of our obligation, we do not source fur.

Despite its natural traits and soft feel, conventional cotton poses a long term and highly negative impact on nature. Luckily there's something called organic cotton. Organic cotton is grown using methods that have a lower impact on mother earth, there's no use of toxic chemicals, and it promotes and enhances biodiversity and biological cycles. Today, all of our cotton products are made of 100 % organic cotton.

All though there are many challenges, seeing results and knowing that we can influence people's work environment on the other side of the globe gives us the motivation to work even harder. Norrøna is working to promote proper labor and environmental conditions in our supply chains through close cooperation with our suppliers and partners. To clarify what we expect from our suppliers Norrøna has developed guidelines for ethical trade in our value chain; the Codes of Conduct. All Norrøna suppliers must sign them before entering a partnership and we inspect and follow up all of our factories according to our policy.

Our commitment goes beyond the value chain of our products. We strive to be as socially and environmentally responsible as possible as a company and have specific targets related to our employees, our HQ at Lysaker, and the company as a whole. The Norrøna House is exclusively powered by renewable energy and we have the ambition of all employees traveling sustainably by the end of 2020. In 2018 98 % of the employees commuted eco-friendly and we've initiated several alternatives to achieve this, e.g wardrobes with showers, parking reserved electric or hybrid cars and internal bike/walk/run to work competitions. We also have a long-term ambition to become a zero waste to landfill HQ, meaning all waste generated at our HQ will be recycled.

In true Norrøna spirit, we want to contribute to the conservation and protection of the nature. Since 2015 we have taken 1% of our sales and put it in a fund reserved for causes and organizations working to promote sustainability and environmentally friendly initiatives. So far, we've donated 20,2 million NOK and there's more to come.

Repairs since 1929

We've been offering repairs on all of our products since the beginning in 1929, actively promoting a long lifetime for our products. Every year, we give thousands of products some extra love and care, so they can join adventures for decades.

We have repair centers in stores around the world. In 2018, we repaired over 11 000 products, securing long product lifetime – even on many products over 30 years old.

Norway

Our inspiration

At Norrøna, we name our collections after epic destinations in Norway. Each place, mountain, or island describe their areas of use.

All products are developed to meet the extreme users' requirements to materials, quality, fit, and functionality following our design philosophy, Loaded Minimalism™.

Ski/Snowboard

We divide our ski/snowboard category into three distinctive concepts; lofoten, tamok, and lyngen, all with purpose-built solutions for their intended activity.

Mountaineering

We divide our mountaineering category into three concepts; trollveggen, falketind, and lyngen. Developed to master big walls, long climbs, and various conditions, each garment is created to push the limits of protection, durability, and mobility.

Outdoor/Hiking

Our hiking collections each assist your quest to boldly encounter nature; svalbard supports general hiking and trekking demands, and bitihorn backs up fast trekking protection in addition to falketind for all weather and conditions.

Mountain Biking

Norrøna's collection for mountain biking is divided into two: fjørå and skibotn. Rain and rough terrain demand functional clothing that will keep you warm and protected – without sacrificing range of motion.

Hunting

We divide our hunting category into three concepts: kvinherad, finnskogen, and recon. So whether you hunt in the mountains or the forest or need the most durable hunting equipment, we have a choice for you.

Lifestyle

Hang up the heavy technical gear and do your own thing in comfort and style with everyday basics and activewear. Built with functional twists and solutions, 100% organic cotton, and recycled designs.

Surfing

The arctic ocean – a challenge for our vision, "Welcome to nature". Designed to withstand the harsh, Arctic waters, this collection offers comfort and warmth with sustainable materials.

Ski/Snowboard

We divide our ski/snowboard category into three distinctive concepts; **lofoten**, **tamok**, and **lyngen**, all with purpose-built solutions for their intended activity.

lofoten

big mountain freeride

The lofoten collection was launched in 2004 as the world's first true freeride collection. It is still the pinnacle of premium products for freeriding, known for its signature design, bold colors, and innovative features. Named after the most beautiful and spectacular area to ski, summit to sea.

Iofoten Gore-Tex Pro Plus Jacket M's

1001-20

Our most durable and fully featured waterproof ski/snowboard jacket developed for big mountain freeride.

Made with durable, recycled 70Dx160D Gore-Tex® Pro most breathable face fabric, the premium Iofoten Gore-Tex Pro Plus Jacket offers excellent weather protection under demanding conditions in the mountains.

The design is kept clean and cohesive with the iconic Iofoten expression yet you'll find every feature needed to ensure optimal freeride functionality. The jacket has a technical fit and offers extended ventilation options; In addition to our two-way underarm venting, there is mesh-lined ventilation on the back of the sleeves with zip opening. You'll also find a full dedicated mesh-lined front ventilation running from the lower front and up to the hood opening. For easy and quick access to a beacon and other essentials, the mesh has a velcro rescue entrance to save time – a feature highly requested among our ambassadors.

The jacket has two lower hand warming pockets, two napoleon pockets that won't interfere with a backpack, and two inner pockets; one with zipping and one bigger which will fit gloves and goggles. Other critical features are a protective storm hood with one-hand adjustment, asymmetric cuffs with Velcro® adjustment and integrated hand-gaiters, a slightly longer back, Zip-off powder skirt with a snap-seal solution and water-resistant YKK® zippers for extra protection. The jacket has passed the Gore-Tex Storm+ Test and has a solution-dyed backer.

Iofoten Gore-Tex Pro Plus Pants M's 1025-20

Our most durable and fully featured waterproof ski/snowboard pants developed for big mountain freeride.

These highly functional pants are made with extremely durable recycled 200D Gore-Tex Pro most rugged fabric and will provide you with the best weather protection on the market. The design is kept clean and cohesive with the iconic Iofoten expression yet you'll find every feature needed to ensure optimal freeride functionality.

There is long, mesh-lined inner thigh ventilation with two-way zippers, and we've added extra ventilation zips on the outside of the thigh pockets so you can optimize the air circulation. They have our Custom-fit waist system™ with 3D mesh in the back, creating a small distance between the pants and body that reduces a clammy feel.

We've optimized the waistline to prevent gaps in the front when attaching the pants to a bib or vest. By having the front zip slightly facing the side, we've created a small overlap that will provide a full seal. The bottom leg width that can easily accommodate a ski or snowboard boot in walk mode.

Other features include integrated snow gaiters, articulated legs, two spacious cargo pockets, a zippered back pocket, snap button tightening around ankles and Vectran rip-stop reinforcements at the bottom leg to protect against steel edges or other sharp objects. They are the only pants within the Iofoten collection with hand warming pockets. The pants have a regular fit and are compatible with all our ski bibs and the snap-in powder skirt on our jackets.

The pants have passed the Gore-Tex Storm+ Test and have a solution-dyed backer.

Iofoten Gore-Tex Pro Jacket M's

1002-20

The original waterproof durable ski/snowboard jacket developed for big mountain freeride.

Setting the benchmark in 2004 for a new generation of skiers, the Iofoten Gore-Tex Pro Jacket has been a freeride classic with uncompromising freeride functionality. Made in a 70Dx70D recycled Gore-Tex Pro most breathable fabric, it is set for tough terrain and demanding weather. It's our most competent freeride jacket, manifesting our design philosophy "loaded minimalism" offering all critical features needed.

The jacket has a technical fit with high napoleon pockets for maximum accessibility when using a backpack and harness. At the front, you'll find a full dedicated mesh-lined front ventilation running from the lower front and up to the hood opening. For easy and quick access to a beacon and other essentials, the mesh has a velcro rescue entrance to save time – a feature highly requested among our ambassadors.

Other critical features include a protective storm hood with one-hand adjustment, asymmetric cuffs with Velcro® adjustment and integrated hand-gaiters, two-way armpit venting, Zip-off powder skirt with a snap-seal solution and water-resistant YKK® zippers for extra protection. The jacket has passed the Gore-Tex Storm+ Test and has a solution-dyed backer.

Iofoten Gore-Tex Pro Pants M's 1026-20

The original waterproof ski/snowboard pants developed for big mountain freeride.

With the intention of being a game-changer to a new generation of skiers, these pants were made uncompromisingly to fulfill the big mountain freeriders need for protection and functionality. These freeride classics have a regular, practical fit and are made in 200D recycled Gore-Tex Pro most rugged fabric to ensure optimal durability and weather protection.

The pants have several storing options; two thigh cargo pockets with easy access, a zippered back pocket, and a small coin pocket. The ¾ length thigh ventilation with two-way zippers secure great ventilation and they have extremely durable Vectran rip-stop reinforcement on the lower leg to protect the pants from steel edges.

We've optimized the waistline to prevent gaps in the front when attaching the pants to a bib or vest. By having the front zip slightly facing the side, we've created a small overlap that will provide a full seal. The bottom leg width that can easily accommodate a ski or snowboard boot in walk mode.

Other features include integrated snow gaiters, articulated legs, snap button tightening around the ankles and reinforcements at the bottom leg to protect against steel edges. The pants have a are compatible with all our ski bibs and the snap-in powder skirt on our jackets.

The pants have passed the Gore-Tex Storm+ Test and have solution-dyed fabric.

Iofoten Gore-Tex Pro Anorak M's

1034-20

Our most protective waterproof ski/snowboard jacket.

Requested by our ambassadors, the Iofoten Gore-Tex Pro Anorak is a highly functional freeride anorak with a more spacious, relaxed fit. It's made in a very durable and protective recycled 70D Gore-Tex Pro most breathable fabric with a long silhouette to provide maximum protection.

The anorak has a very long two-way underarm zipper that runs from the bottom hem to the elbow. This provides great ventilation, provides effortless dressing and makes it very easy to add or remove layers underneath while you're still protected.

The front has a long, water-resistant two-way zipper and a spacious kangaroo pocket which is accessible from both sides. Due to the anorak design, we've added a specially designed two-part snow skirt so you'll still be able to seal the snow completely out.

Other practical features include a protective storm hood with one-hand adjustment, asymmetric cuffs with Velcro® adjustment and integrated hand-gaiters, hand warming pockets and water-resistant YKK® zippers for extra protection. The jacket has passed the Gore-Tex Storm+ Test and has a solution-dyed backer.

Iofoten Gore-Tex Jacket M's

1004-20

Our most versatile waterproof ski/snowboard jacket.

This cleaner, versatile version of the iconic Iofoten Gore-Tex Pro is made in a special 40D Gore-Tex recycled fabric with a knitted interlock backer for extra comfort. This provides excellent weather protection in a softer and breathable product.

It has the shortest cut of the Iofoten Gore-Tex jackets and has a regular, slightly shorter and boxier fit. The spacious Napoleon chest pockets will not interfere with backpacks and the hand warming pockets will provide extra storage.

Critical freeride features include asymmetric cuffs with Velcro® adjustments, internal chest pocket, YKK® water-resistant zippers, two-way underarm ventilation, YKK® water-resistant zippers and a zip-off powder skirt with a snap-seal solution.

Iofoten Gore-Tex Pants M's 1027-20

Our most versatile waterproof ski/snowboard pants.

Developed to achieve a lighter and softer freeride pant with a great weight to durability ratio, these pants are made in a lightweight wind and waterproof recycled Gore-Tex 70Dx160D with a TR2 backer.

They have key features such as Custom-fit system™ waist adjustment, thigh ventilation from the waist to the knee, thigh pockets for essential gear and reinforcement on the inside of the lower leg. The pants have a technical fit, slightly more narrow than the other Iofoten Gore-Tex Pants, but still customized for freeriding.

We've optimized the waistline to prevent gaps in the front when attaching the pants to a bib or jacket. By having the front zip slightly facing the side, we've created a small overlap that will provide a full seal. The bottom leg width that can easily accommodate a ski or snowboard boot in walk mode.

Other critical features include articulated legs, snap button tightening around the ankles, and integrated snow gaiters. The pants are compatible with all our ski bibs and the snap-in powder skirt on our jackets.

Iofoten Gore-Tex insulated Jacket M's 1001-18

A partly insulated and durable waterproof ski/snowboard jacket.

Made for freeride skiing during cold winter days and for those who prefer a little extra warmth, this fully featured jacket will not compromise on weather protection nor functionality.

To ensure maximum performance, we have made it with two thicknesses of insulation; warmer in the torso/shoulders and thinner in the sleeves and back. There is no insulation in the hood or below the snowskirt but we have kept it in the collar for extra comfort. The underarm ventilation offers great air flow when climbing to reach those thrilling drops. The snowskirt will keep the snow from creeping in and can easily be hidden away thanks to the snap and fold button solution.

Other features include asymmetric cuffs, hand warming pockets, chest pocket, goggle wipe, hand gaiters and an inside mesh pocket where you can store your gloves or warm your ice goggles.

Material	Gore-Tex® 2-layer, 70D recycled nylon,

Iofoten Gore-Tex insulated Pants M's 1051-20

A partly insulated waterproof ski/snowboard pants.

The Iofoten Gore-Tex insulated Pants are partly insulated and highly weather protective pants made for freeride adventures on cold days. With these softer and warmer pants, you are all set for new lines in maximum comfort without sacrificing functionality and durability.

The design is a replica of the iconic Iofoten Gore-Tex Pro Pants in a 2-layer construction and has kept essential features such as spacious thigh pockets, reinforcement at the legs to prevent damage from steel edges and the Custom-Fit waist system for optimal customization.

The extremely durable 2-layer Gore-Tex face fabric is recycled and CO DWR treated and the insulation is recycled Thermo40. To keep the weight down and functionality up, the front insulation runs from the top of the thigh and all the way down to the boot and the back insulation is mainly in the seat.

Material	Gore-Tex® 2-layer, 150D recycled polyester

Iofoten Gore-Tex thermo80 Jacket M's 1002-21

Our warmest and softest waterproof ski/snowboard jacket developed for big mountain freeride.

The main fabric is a 30D GORE-TEX® 2-layer rip-stop recycled nylon. This provides a light, soft feel, while still offering full waterproofness. The jacket is reinforced with GORE-TEX® 2-layer 70D recycled nylon on exposed areas. It's insulated with 100% recycled Primaloft Silver Insulation Bio, which is distributed according to body mapping: The main is 80g/m2,, the shoulders are 100g/m2, and we've put 60g/m2, in the hood and forearm area.

The jacket is the first choice for the coldest freeride adventures: it's as soft as an insulation layer, and as durable and protective as a hard shell. It is crafted to deliver great warmth combined with every essential function to perform in the rugged mountains. It's a replica of the first Primaloft Iofoten, but with all recycled materials.

Deriving from the iconic Iofoten concept, the design is kept clean and minimalistic with solutions to enhance your freeride experience. It has a regular to relaxed fit tailored for ski/snowboard activities with a y-shaped cut and articulated arms to ensure mobility. The back is made a bit longer for extra protection, and the asymmetric cuffs will also prevent unwanted exposure.

Other features: Helmet compatible storm hood with one-hand adjustment, two zippered chest pockets, two zippered lower hand pockets, zippered sleeve pocket, underarm venting with mesh. one zippered inner pocket that can fit a wallet or cell phone, one inside mesh pocket for larger items, a smooth fleece backer next-to-skin for soft comfort, one-hand hem adjustment with a flat front, detachable or "fold away" non-detachable snow skirt.

Lofoten Primaloft80 Anorak M's 1013-20

Our most durable and flexible insulated ski/snowboard jacket.

The Lofoten Primaloft80 Anorak is a ski-specific, insulated Anorak made for extensive use down steep and rugged lines. Using the revolutionizing, recycled PrimaLoft Gold Aerogel insulation, the jacket offers an outstanding warmth-to-weight ratio. Aerogel is known as the world's lightest solid, and with the PrimaLoft Gold Crosscore technology, they've managed to utilize its great insulation properties into outdoor gear.

The face fabric is a durable, lightweight rip-stop nylon Cordura ideal for rough surfaces and is highly windproof and water repellent. For extra protection, we've also added waterproof/breathable reinforcement on the shoulders, lower torso (not on women's), and cuffs. This creates a highly functional anorak that can take a hit as a standalone insulation piece as well as a warm and protective layering piece.

There are two-way side zippers running from the bottom hem and all the way to the elbows, which provide good ventilation and makes it easy to put the piece on and off. Because synthetics don't get soggy like down used in wet and damp conditions or when the output is high, this piece is perfect for humid conditions where you need warmth. You have plenty of room for your stuff; it has a kangaroo pocket, a chest pocket, two large napoleon pockets, and a phone pocket.

Other features include PowerStretch cuffs, storm hood fitted for a helmet with a one-hand adjustment and elastic cuffs. As synthetics don't get soggy, it's perfect for humid conditions. It has a kangaroo pocket, a chest pocket, two large napoleon pockets, and a phone pocket. Other features include PowerStretch cuffs, storm hood fitted for a helmet with a one-hand adjustment and elastic cuffs.

Iofoten hiloflex200 Hood M's

1017-20

A weather protective and wind-resistant ski/snowboard midlayer developed for big mountain freeride.

The Iofoten hiloflex200 saw the light of day on our search for the “holy grail” of midlayer technologies. This premium double weave, high loft material offers dynamic warmth, good flexibility, and a perfect balance between heat and comfort. It’s not too warm when active but always gives reliable comfort when cold.

The face of the material is super durable with wind-resistant properties, which makes it suitable as an outer layer on drier days. The inside of the material is super soft and comfy, always ensuring optimal comfort.

The hooded jacket has an integrated face mask that works as a balaclava and it can easily be pulled up and used as a thin beanie underneath your helmet. Other features include two hand warming pockets, a chest pocket with zipper and elastic cuffs with thumbholes.

NEW

Iofoten Thermal Pro Hood M's

1001-22

Our most versatile ski/snowboard midlayer.

This half-zip jacket is made for freeriding but also works for mountaineering, trekking, and general outdoor. It's made with different Polartec® fabrics to provide optimal thermal performance and comfort.

We use the Polartec® Power Grid™ in the back, stomach area, underarm, and hood because it offers excellent quick-drying and moisture-wicking properties. This patented grid design structure is a way to reduce fabric weight while increasing warmth and compressibility. Open-air channels surrounding each segment of the grid allow easy release of all excess body heat as it builds during activity.

The shoulders, neck, and top sleeve are made in Polartec® Thermal Pro® because of its superb warmth-to-weight ratio. This unique knit technique creates air pockets that trap air and retain body heat, providing outstanding warmth to weight. Not only are they very comfortable, but these fabrics offer excellent breathability, dry quickly, and are very pill-resistant.

Key features include a snug hood that fits under the helmet, a two-way half front zip, a hand-warming pocket, a chest pocket, and comfortable, stretchy cuffs with thumb holes. Side front zip to avoid zipper layering. Placement of pocket easy access when opening jacket.

The jacket has a technical fit with Y-cut and articulated arms for good movement and it's made to fit underneath a bib.

Iofoten Gore-Tex Pro Jacket W's 1031-20

The original waterproof durable ski/snowboard jacket developed for big mountain freeride.

Setting the benchmark in 2004 for a new generation of skiers, the Iofoten Gore-Tex Pro Jacket has been a freeride classic with uncompromising freeride functionality. Made in a 70Dx70D recycled Gore-Tex Pro most breathable fabric, it is set for tough terrain and demanding weather. It's our most competent freeride jacket, manifesting our design philosophy "loaded minimalism" offering all critical features needed.

The jacket has a technical fit with high napoleon pockets for maximum accessibility when using a backpack and harness. At the front, you'll find a full dedicated mesh-lined front ventilation running from the lower front and up to the hood opening. For easy and quick access to a beacon and other essentials, the mesh has a velcro rescue entrance to save time – a feature highly requested among our ambassadors.

Other critical features include a protective storm hood with one-hand adjustment, asymmetric cuffs with Velcro® adjustment and integrated hand-gaiters, two-way armpit venting, Zip-off powder skirt with a snap-seal solution and water-resistant YKK® zippers for extra protection. The jacket has passed the Gore-Tex Storm+ Test and has a solution-dyed backer.

Iofoten Gore-Tex Pro Pants W's

1032-20

The original waterproof ski/snowboard pants developed for big mountain freeride.

With the intention of being a game-changer to a new generation of skiers, these pants were made uncompromisingly to fulfill the big mountain freeriders need for protection and functionality. These freeride classics have a regular, practical fit and are made in 200D recycled Gore-Tex Pro most rugged fabric to ensure optimal durability and weather protection.

The pants have several storing options; two thigh cargo pockets with easy access, a zippered back pocket, and a small coin pocket. The $\frac{3}{4}$ length thigh ventilation with two-way zippers secure great ventilation and they have extremely durable Vectran rip-stop reinforcement on the lower leg to protect the pants from steel edges.

We've optimized the waistline to prevent gaps in the front when attaching the pants to a bib or vest. By having the front zip slightly facing the side, we've created a small overlap that will provide a full seal. The bottom leg width that can easily accommodate a ski or snowboard boot in walk mode.

Other features include integrated snow gaiters, articulated legs, snap button tightening around the ankles and reinforcements at the bottom leg to protect against steel edges. The pants have a are compatible with all our ski bibs and the snap-in powder skirt on our jackets.

The pants have passed the Gore-Tex Storm+ Test and have solution-dyed fabric.

Iofoten Gore-Tex Pro Anorak W's

1049-20

Our most protective waterproof ski/snowboard jacket.

Requested by our ambassadors, the Iofoten Gore-Tex Pro Anorak is a highly functional freeride anorak with a more spacious, relaxed fit. It's made in a very durable and protective 70D Gore-Tex Pro most breathable fabric with a long silhouette to provide maximum protection.

The anorak has a very long two-way underarm zipper that runs from the bottom hem to the elbow. This provides great ventilation, provides effortless dressing and makes it very easy to add or remove layers underneath while you're still protected.

The front has a long, water-resistant two-way zipper and a spacious kangaroo pocket which is accessible from both sides. Due to the anorak design, we've added a specially designed two-part snow skirt so you'll still be able to seal the snow completely out.

Other practical features include a protective storm hood with one-hand adjustment, asymmetric cuffs with Velcro® adjustment and integrated hand-gaiters, hand warming pockets and water-resistant YKK® zippers for extra protection. The jacket has passed the Gore-Tex Storm+ Test and has a solution-dyed backer.

Iofoten Gore-Tex Jacket W's

1039-20

Our most versatile waterproof ski/snowboard jacket.

This cleaner, versatile version of the iconic Iofoten Gore-Tex Pro is made in a special 40D Gore-Tex recycled fabric with a knitted interlock backer for extra comfort. This provides excellent weather protection in a softer and more breathable product.

It has the shortest cut of the Iofoten Gore-Tex jackets and has a regular, slightly shorter and boxier fit. The spacious Napoleon chest pockets will not interfere with backpacks and the hand warming pockets will provide extra storage.

Critical freeride features include asymmetric cuffs with Velcro® adjustments, internal chest pocket, YKK® water-resistant zippers, two-way underarm ventilation, YKK® water-resistant zippers and a zip-off powder skirt with a snap-seal solution.

Iofoten Gore-Tex Pants W's 1044-20

Our most versatile waterproof ski/snowboard pants.

Developed to achieve a lighter and softer freeride pant with a great weight to durability ratio, these pants are made in a lightweight wind and waterproof recycled Gore-Tex 70Dx160D with a TR2 backer.

They have key features such as Custom-fit system™ waist adjustment, thigh ventilation from the waist to the knee, thigh pockets for essential gear and reinforcement on the inside of the lower leg. The pants have a technical fit, slightly more narrow than the other Iofoten Gore-Tex Pants, but still customized for freeriding.

We've optimized the waistline to prevent gaps in the front when attaching the pants to a bib or jacket. By having the front zip slightly facing the side, we've created a small overlap that will provide a full seal. The bottom leg width that can easily accommodate a ski or snowboard boot in walk mode.

Other critical features include articulated legs, snap button tightening around the ankles, and integrated snow gaiters. The pants are compatible with all our ski bibs and the snap-in powder skirt on our jackets.

Iofoten Gore-Tex insulated Jacket W's 1007-18

A partly insulated and durable waterproof ski/snowboard jacket.

Based on the iconic look of the original Gore-Tex Pro jacket, the new Iofoten Gore-Tex insulated Jacket for women offers a fully protective and extremely durable freeride jacket in recycled 2-layer shell fabric and recycled PrimaLoft insulation.

Made for freeride skiing during cold winter days and for those who prefer a little extra warmth, this fully featured jacket will not compromise on weather protection nor functionality.

To ensure maximum performance, we have made it with two thicknesses of insulation; warmer in the torso/shoulders and thinner in the sleeves and back. There is no insulation in the hood or below the snowskirt but we have kept in the collar for extra comfort.

The under arm ventilation offers great air flow when climbing to reach those thrilling drops. The snowskirt will keep the snow from creeping in and can easily be hidden away thanks to the snap and fold button solution.

Other features include asymmetric cuffs, hand warming pockets, chest pocket, goggle wipe, hand gaiters and an inside mesh pocket where you can store your gloves or warm your icy goggles.

Material	Gore-Tex® 2-layer, 70D recycled nylon
Insulation	70% recycled polyester, 30% polyester

Iofoten Gore-Tex insulated Pants W's 1052-20

A partly insulated waterproof ski/snowboard pants.

The Iofoten Gore-Tex insulated Pants are partly insulated and highly weather protective pants made for freeride adventures on cold days. With these softer and warmer pants, you are all set for new lines in maximum comfort without sacrificing functionality and durability.

The design is a replica of the iconic Iofoten Gore-Tex Pro Pants in a 2-layer construction and has kept essential features such as spacious thigh pockets, reinforcement at the legs to prevent damage from steel edges and the Custom-Fit waist system for optimal customization.

The extremely durable 2-layer Gore-Tex face fabric is recycled and CO DWR treated and the insulation is recycled Thermo40. To keep the weight down and functionality up, the front insulation runs from the top of the thigh and all the way down to the boot and the back insulation is mainly in the seat.

Material	Gore-Tex® 2-layer, 150D recycled polyester

Iofoten Gore-Tex thermo100 Jacket W's 1004-21

Our warmest and softest waterproof ski/snowboard jacket developed for big mountain freeride.

The main fabric is a 30D GORE-TEX® 2-layer rip-stop recycled nylon. This provides a light, soft feel, while still offering full waterproofness. The jacket is reinforced with GORE-TEX® 2-layer 70D recycled nylon on exposed areas. It's insulated with 100% recycled Primaloft Silver Insulation Bio, which is distributed according to body mapping: The main is 100g/m2, the shoulders are 100g/m2, and we've put 60g/m2 in the hood and forearm area.

The jacket is the first choice for the coldest freeride adventures: it's as soft as an insulation layer, and as durable and protective as a hard shell. It is crafted to deliver great warmth combined with every essential function to perform in the rugged mountains. It's a replica of the first Primaloft Iofoten, but with all recycled materials.

Deriving from the iconic Iofoten concept, the design is kept clean and minimalistic with solutions to enhance your freeride experience. It has a regular to relaxed fit tailored for ski/snowboard activities with a y-shaped cut and articulated arms to ensure mobility. The back is made a bit longer for extra protection, and the asymmetric cuffs will also prevent unwanted exposure.

Other features: Helmet compatible storm hood with one-hand adjustment, two zippered chest pockets, two zippered lower hand pockets, zippered sleeve pocket, underarm venting with mesh, one zippered inner pocket that can fit a wallet or cell phone, one inside mesh pocket for larger items, a smooth fleece backer next-to-skin for soft comfort, one-hand hem adjustment with a flat front, detachable or "fold away" non-detachable snow skirt.

Iofoten Primaloft80 Anorak W's 1042-20

Our most durable and flexible insulated ski/snowboard jacket.

The Iofoten Primaloft80 Anorak is a ski-specific, insulated Anorak made for extensive use down steep and rugged lines. Using the revolutionizing, recycled PrimaLoft Gold Aerogel insulation, the jacket offers an outstanding warmth-to-weight ratio. Aerogel is known as the world's lightest solid, and with the PrimaLoft Gold Crosscore technology, they've managed to utilize its great insulation properties into outdoor gear.

The face fabric is a durable, lightweight rip-stop nylon Cordura ideal for rough surfaces and is highly windproof and water repellent. For extra protection, we've also added 2L Gore-Tex reinforcement on the shoulders, lower torso (not on women's), and cuffs. This creates a highly functional anorak that can take a hit as a standalone insulation piece as well as a warm and protective layering piece. There are two-way side zippers running from the bottom hem and all the way to the elbows, which provide good ventilation and makes it easy to put the piece on and off.

Because synthetics don't get soggy like down used in wet and damp conditions or when the output is high, this piece is perfect for humid conditions where you need warmth. You have plenty of room for your stuff; it has a kangaroo pocket, a chest pocket, two large napoleon pockets, and a phone pocket.

Other features include PowerStretch cuffs, storm hood fitted for a helmet with a one-hand adjustment and elastic cuffs. As synthetics don't get soggy, it's perfect for humid conditions. It has a kangaroo pocket, a chest pocket, two large napoleon pockets, and a phone pocket. Other features include PowerStretch cuffs, storm hood fitted for a helmet with a one-hand adjustment and elastic cuffs.

Iofoten hiloflex200 Hood W's

1043-20

A weather protective and wind-resistant ski/snowboard midlayer developed for big mountain freeride.

The Iofoten hiloflex200 saw the light of day on our search for the “holy grail” of midlayer technologies. This premium double weave, high loft material offers dynamic warmth, good flexibility, and a perfect balance between heat and comfort.

It's not too warm when active but always gives reliable comfort when cold. The face of the material is super durable with wind-resistant properties, which makes it suitable as an outer layer on drier days. The inside of the material is super soft and comfy, always ensuring optimal comfort

The hooded jacket has an integrated face mask that works as a balaclava and it can easily be pulled up and used as a thin beanie underneath your helmet. Other features include two hand warming pockets, a chest pocket with zipper and elastic cuffs with thumbholes.

Iofoten Thermal Pro Hood W's

1003-22

Our most versatile ski/snowboard midlayer.

This half-zip jacket is made for freeriding but also works for mountaineering, trekking, and general outdoor. It's made with different Polartec® fabrics to provide optimal thermal performance and comfort.

We use the Polartec® Power Grid™ in the back, stomach area, underarm, and hood because it offers excellent quick-drying and moisture-wicking properties. This patented grid design structure is a way to reduce fabric weight while increasing warmth and compressibility. Open-air channels surrounding each segment of the grid allow easy release of all excess body heat as it builds during activity.

The shoulders, neck, and top sleeve are made in Polartec® Thermal Pro® because of its superb warmth-to-weight ratio. This unique knit technique creates air pockets that trap air and retain body heat, providing outstanding warmth to weight. Not only are they very comfortable, but these fabrics offer excellent breathability, dry quickly, and are very pill-resistant.

Key features include a snug hood that fits under the helmet, a two-way half front zip, a hand-warming pocket, a chest pocket, and comfortable, stretchy cuffs with thumb holes. Side front zip to avoid zipper layering. Placement of pocket easy access when opening jacket.

The jacket has a technical fit with Y-cut and articulated arms for good movement and it's made to fit underneath a bib.

tamok Gore-Tex Pro Jacket M's 1201-19

Our most durable, waterproof ski/snowboard jacket developed for backcountry freeride.

Made for a life riding powder, the tamok Gore-Tex Pro Jacket is the go-to jacket for everyone with the backcountry as their preferred territory. This longer cut jacket will provide superior protection from rough weather, along with great ventilation for touring and hiking missions.

It combines our minimalistic take on the original riders, the western cattlemen, with uncompromising functionality and sustainability. With its relaxed fit and feel, the jacket offers great movement and comfort down the lines and into the after-hours.

It is made in a highly durable 3-layer 70D X 160D recycled Gore-Tex Pro fabric with reinforced 200D Gore-Tex Pro fabric on shoulders and elbows.

Details include chest vents with mesh, a large napoleon pocket, hand gaiters, underarm vents, a detachable powder skirt, asymmetric cuffs with Velcro adjustment, radio/keycard pocket and a weather protecting, one hand adjustable hood that easily fits a helmet.

The spacious lower hand pockets will not interfere with a backpack harness. With its lofoten Gore-Tex Pro functionality combined with a distinct yet toned down look and natural feel, it's the top of the line choice for the backcountry adrenaline junkie.

tamok Gore-Tex Pro Bib M's 1205-19

Our most durable waterproof ski/snowboard bib pants.

Forest rides, slushy spring or powder pillows – the tamok Gore-Tex Pro Bib can deal with any freeride condition. This highly functional Gore-Tex Pro bib is based on the classic workwear overall, offering the optimal combination of style and protection.

Made in 200D recycled Gore-Tex Pro fabric, these will easily face rough weather and are not afraid of some serious wear and tear. Mesh lined zipper vents on both sides will keep the pow out and the air flowing when heating up.

The left zip goes all the way up to the top to take the bib on or off. The Vectran-reinforced lower leg is kept slightly wide to make room for ski and snowboard boots without having to use a zip.

When done with the ride, you can narrow the leg with snap buttons. Other features include two spacious thigh pockets, a key pocket, stretchy and adjustable suspenders, and a 4-way stretch panel in the back for great movement and ventilation.

The full covering front is kept crisp and clean and is adorned by two pockets with plenty of room for stash – one of them with two internal compartments. Zipped fly on the men's pants.

These pants are guaranteed to keep you both dry and good looking on epic powder days as well as slushy rides in the spring.

tamok Gore-Tex thermo80 Jacket M's 1201-21

Our most durable and protective waterproof insulated ski/snowboard jacket.

This heavy-duty jacket is made with a solid 2L 70Dx160D GORE-TEX fabric with a 100% recycled polyester face textile. It is perfect for long, weather-exposed days out in the backcountry, offering great waterproofness, breathability, and protection. We've added 2L 200D GORE-TEX reinforcement on the shoulders and elbows to provide extra protection on exposed areas. It's insulated with recycled polyester thermo80 filling, which is distributed according to body mapping to pinpoint the right insulation in the right place: Main 80g/m2, hood 60g/m2, arms 40g/m2. The jacket is designed to offer uncompromising powder functionality in a warmer package. It's the perfect choice for those who want a warmer and softer product, but require premium durability and protection. It has a spacious pocket solution with strategic placements for easy access with no interference with your backpack.

With protection at the core, the jacket has an extended cut and is close to a replica of the 3L GORE-TEX PRO. It's based on a regular trim but has a more relaxed fit and feel to offer great movement, easy layering, and comfort down the lines. It also has articulated arms with asymmetric, covering cuffs. The conceptual design represents a distinct look in our ski segment, offering stand-out pieces for backcountry riders with high expectations of style and protection.

Other features: Helmet compatible hood with one-hand adjustment, chest pocket, two zippered lower hand pockets with flaps, zippered sleeve pocket, underarm venting with mesh, one zipped inner pocket, one inside mesh pocket for larger items, a smooth fleece backer next-to-skin for soft comfort, smart cuff that can be sleek and minimum of bulk when tightened, one-hand hem adjustment with a flat front, detachable snow skirt.

tamok down750 Jacket M's

1203-19

Our warmest durable ski/snowboard down jacket.

The tamok down750 Jacket is probably going to be your best puffy powder pal for the freeride season. This warm and rugged down jacket is made to withstand backcountry rides through a tricky forest and still is light enough to be accompanied by an outer layer.

Inspired by the original western riders, it combines our Loaded Minimalism design philosophy with great functionality. The durable, recycled 45D outer fabric has a natural and cotton-like feel, and the shoulders have reinforced yokes with a suede look for that extra protection and edge.

The 750down fill is RDS 2.0 certified, and the jacket packs down easily into your daypack as an essential part of your everyday on- or off-mountain rider kit. It's completely wind-resistant and will have no problem winning a quick draw with some light snowfall.

Practical features include hand warmer pockets with a soft lining, a neat napoleon pocket, a weather protective hood with room for a helmet and a packable pocket for easy storage in the pack.

tamok Gore-Tex thermo60 Pants W's 1204-21

Our warmest, most durable and waterproof ski/snowboard insulated pants.

Our warmest, most durable and waterproof ski/snowboard insulated pants.

These heavy-duty pants are made with a solid 200D GORE-TEX fabric with a 100% recycled polyester face textile. It is perfect for long, weather-exposed days out in the backcountry, offering great warmth, waterproofness, breathability, and protection. They're insulated with recycled polyester thermo40 filling, which is distributed according to body mapping to pinpoint the right insulation in the right place: The main insulation is a 40g/m2 insulation, but we've put 60/m2 insulation on the knees and seat as these areas are more exposed.

It's designed to offer uncompromising powder functionality in a warmer package, creating the ultimate fully insulated, waterproof heavy-duty pant for ski and snowboard. It provides all essential backcountry features, and to make ample storage with easier access, it has a bellow function on the pockets. With our zip on/off powder skirt and snap-seal system, you can easily attach the jacket to your Norrøna ski pants.

The pants have a regular fit and are replicas of the bib pant but with an ordinary waist solution with our Custom-fit waist system™. It has articulated knees for increased mobility.

Other features: Custom-fit waist system™, bib compatible, two zippered hand pockets, thigh pockets, side ventings with mesh that goes from waist to knee, reinforced lower leg. hem with snap adjustments, non-detachable snow gaiters.

tamok down750 Jacket W's

1221-19

Our warmest durable ski/snowboard down jacket.

The tamok down750 Jacket is probably going to be your best puffy powder pal for the freeride season. This warm and rugged down jacket is made to withstand backcountry rides through a tricky forest and still is light enough to be accompanied by an outer layer.

Inspired by the original western riders, it combines our Loaded Minimalism design philosophy with great functionality. The durable, recycled 45D outer fabric has a natural and cotton-like feel, and the shoulders have reinforced yokes with a suede look for that extra protection and edge.

The 750down fill is RDS 2.0 certified, and the jacket packs down easily into your daypack as an essential part of your everyday on- or off-mountain rider kit. It's completely wind-resistant and will have no problem winning a quick draw with some light snowfall.

Practical features include hand warmer pockets with a soft lining, a neat napoleon pocket, a weather protective hood with room for a helmet and a packable pocket for easy storage in the pack.

tamok wool Shirt W's

1219-19

Our warmest, most durable shirt.

The tamok wool Shirt may be soft and cozy on the outside but has the performance of a technical midlayer. With its durable and warm reprocessed wool fabric, it will make sure low temperatures won't stand in the way of good lines, and you can even button the collar fully up for some extra protection.

It has a classic, yet minimalistic western vibe, with corduroy reinforcements on the elbow and the circular pocket opening on the zipped chest pocket.

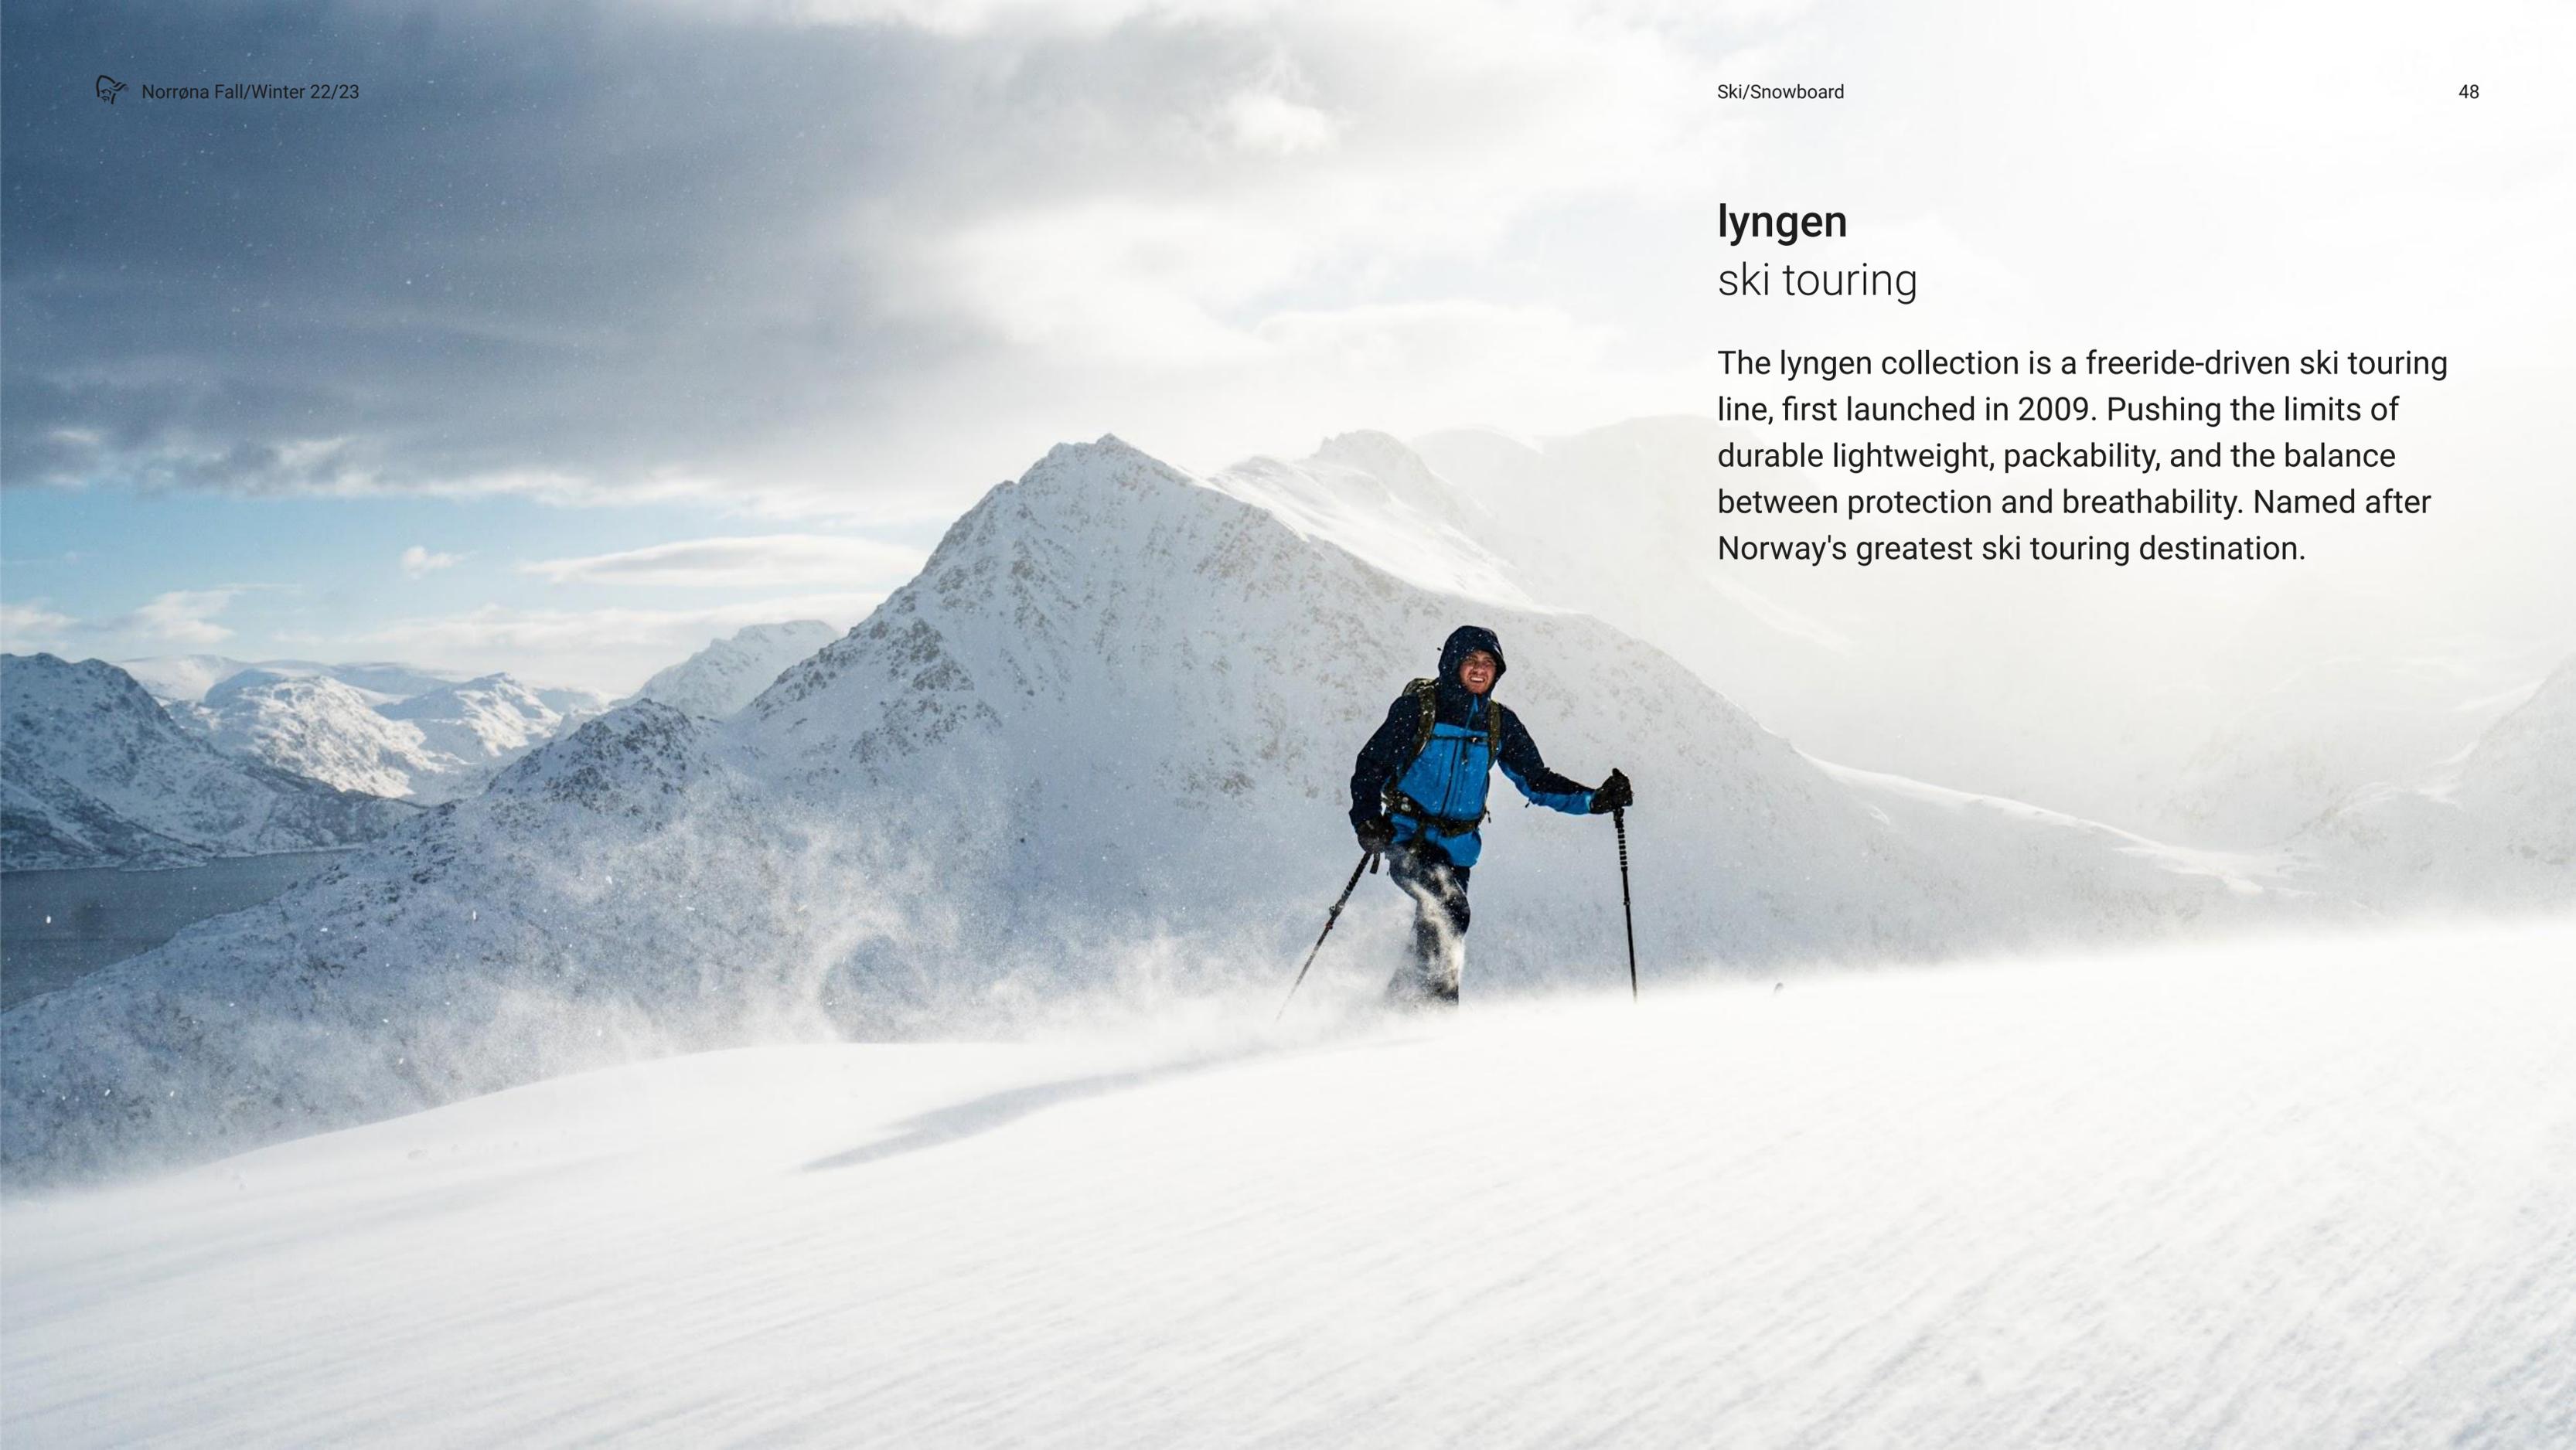

To keep it comfy and durable, we've kept the corduroy theme on the inside of the collar and cuffs as well.

Other features include two zippered hand pockets, lined shoulders for better movement and snap button closing in the front. Let's just call it wool with an attitude.

Material	70% wool reprocessed, 30% nylon

Iyngen Gore-Tex Jacket M's 2006-21

Our lightest, waterproof ski/snowboard jacket developed for ski touring.

The lightweight ski touring jacket perfectly blends two technologies: The main fabric is a recycled 30D Gore-Tex® Active nylon fabric to provide maximum protection and breathability during high intensity. It's yet sturdy and durable, but with a considerable lower weight than our other ski shell jackets. The second material is a recycled 30D rip-stop GORE-TEX® 3-layer C-knit recycled nylon, which is used on shoulders, sleeves and collar to increase the range of movement and durability without compromising on protection.

The jacket is specifically designed for ski touring, and is made to push the limits of lightweight durability. It offers the perfect combination of waterproofness, lightweight, durability and breathability to jointly protect and ease your aerobic climb and ski time. The jacket has all critical features, and a front venting solution similar to the Iofoten one.

The jacket has a refined technical fit. It has a Y-shaped cut, so your mobility will never be reduced – perfect for alpine movement. The arms are articulated and it's slightly longer in the back for extra protection.

Other features: storm hood with one-hand adjustment fitted for helmet, asymmetric cuffs with velcro adjustment, double zipper with ventilation option, chest ventilation with YKK water resistant zipper and mesh, internal chest pocket, laminated stretch woven hand gaiter™, reinforced shoulders, smooth fleece backer next-to-skin for soft comfort, two vertical chest pockets with YKK water resistant zippers.

Iyngen Gore-Tex Pro Pants M's

2002-22

Our lightest waterproof ski/snowboard pants developed for ski touring.

These lightweight pants are designed for freeride-minded ski touring but are also suitable for general skiing activities, all-year mountaineering, and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

The main fabric is a 3-layer 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection, and optimized breathability. It has a solution-dyed rip-stop backer. The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include Custom-Fit Waist™ system for easy customization, side venting from hip to below the knee with two-way zippers, two strategically placed thigh pockets, and a small key pocket. Zipper openings from the lower leg that run-up to the boot shaft enable easy adjustment of width to accommodate walk mode and ski mode.

Snap tightening under the knee enables tightening around the leg to prevent loose fabric when using crampons and it has integrated lightweight adjustable snow gaiters. The pants are compatible with the mountaineering bib.

The pants have a roomy regular fit with articulated knees and seat for optimal touring mobility.

lyngen Gore-Tex Active Jacket M's

2016-22

Our most breathable, lightweight waterproof ski/snowboard jacket developed for ski touring.

This weather protective jacket is made for ski touring but works excellent for other mid to high-intensity activities ranging from trekking to lightweight mountaineering. It's made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), breathability (RET 3-6), and total windproofness.

The jacket blends two GORE-TEX® technologies: The front and underarm area are in Active SHAKEDRY™, a technology that eliminates the face fabric, preventing the absorption of water to maintain comfort during high-intensity activities. Wearers will not experience the chilling effect that can result from a wetted-out face fabric, and the garment dries out fast.

The hood, shoulders, upper arms, and bottom hem are in 3D GORE-TEX® Active recycled nylon fabric which is built for extreme breathability and is ideal for highly aerobic, done-in-a-day activities. Together, they offer excellent water protection with marked leading breathability.

Key features include a helmet-compatible hood with one-hand cord adjustment, two chest pockets, a small inside chest pocket, lightweight hand gaiters, and asymmetric cuffs with Velcro® tightening. To provide optimal venting, it has a zipped front solution with a full-length venting area running from the chest and down to the hem, which also enables airflow while keeping your neck and face protected.

The jacket has a slim fit with a Y-cut and articulated arms for good alpine movement.

Iyngen Gore-Tex Paclite Overpants M's

2010-22

Lightweight, packable, and waterproof ski touring over pants.

These protective over pants are made for ski touring and are the ultimate bring-along pant when touring on days with uncertain weather and you don't wish to wear waterproof pants all the time. They are also suitable for general all-year mountaineering and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

We use the GORE-TEX PACLITE® 4 PLUS fabric – a soft, lightweight tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being durably waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include full side 2-way zippers to make them easier to put on and off, snap solution in the waist to keep the zippers all open while still keeping the pants in place, an elastic band in the back, internal webbing adjustment in the front, zip-fly and zippered pockets. Velcro® adjustment under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom hem has an elastic cord for adjustment and a snap closure to tighten it if needed. The pants are suspender compatible.

The pants have a technical fit with articulated knees and seat for optimal touring mobility. The lower legs are on the wider side, as they are made to be put on top of ski touring boots.

lyngen dri2 thermo60 Jacket M's

2005-21

Our most packable, waterproof insulation jacket.

This technical, fully taped insulation jacket is made in a 15D 2L dri2, recycled nylon. It offers great protection, lightweight and great breathability – perfect for ski touring and other high-intensity activities. It has a PFC/CO-treatment with a 20.000 water column. The pocket is not waterproof. The 60g/m2 100% recycled polyester insulation is distributed in a t-shirt shape to ensure great warming properties where it is most needed: body and half sleeve is 60g/m2, rest is 40g/m,.

This premium insulation jacket is the perfect hybrid between an insulated jacket and a super lightweight waterproof and breathable shell jacket. It's developed as an uncompromising insulation jacket with high emphasis on weight, feel and thermal properties. It's what you bring for the adventures when the weather is rough or as a backup combo jacket during ski touring and touring in the spring. To keep the weight down and lower the packing volume, it has a minimalistic design and only the essential features.

Technical fit with articulated sleeves and great sleeve moveability. Fits on top as well as under a shell jacket and has a helmet compatible hood.

Two mid-mounted pockets that do not come in conflict with shoulder straps and hip belts, YKK zippers, one zipped inner pocket that can fit a wallet or cell phone, one inside mesh pocket, smooth fleece backer next-to-skin for soft comfort, elasticated cuffs, one-hand hem adjustment with a flat front.

lyngen hiloflex100 Jacket M's 2008-21

The ultimate, fully featured midlayer developed for ski-touring.

This premium recycled double weave, high loft material offers great stretch, protection and a perfect balance between heat and comfort. It's not too warm when active, but always gives reliable comfort when cold. The face of the material is super durable with wind-resistant and water-resistant properties, which makes it suitable as an outer layer on drier days. The inside of the material is super soft and comfy, always ensuring optimal comfort. The back is in a more breathable, open construction for moisture wicking and comfort when wearing a backpack.

A lightweight yet durable and protective midlayer with key features for free ski mountaineering or ski touring. It's a versatile midlayer that can double as a softshell with the primary function of keeping you protected and warm when needed and allow for overheat and moisture to escape. Specially designed for ski touring, it has characteristic front pockets with two entrances, both in front and the side, which fits skins. These have a waterproof lining towards the body, which prevents you from getting wet and cold due to wet skins.

The jacket is especially designed for ski touring with a refined technical fit. It has a Y-shaped cut, so your mobility will never be reduced – perfect for alpine movement. The arms are articulated and it's slightly longer in the back for extra protection. The hood is made to fit under a helmet.

Other features: snug hood with high collar, full front zip, one zippered chest pocket, two voluminous stretch skin pockets, stretch cuffs with thumb grip, sleeve that can be pulled up to the elbow, elasticated hem to reduce heat loss or keep windchill out.

lynngen flex1 Pants M's

2004-21

Breathable and durable ski/snowboard soft shell pants developed for ski touring.

These highly stretchable ski pants are made in a windproof recycled nylon/recycled polyester/elastane mix which ensures great flexibility and comfort. They are reinforced with a recycled polyamide/polyester/elastane mix on exposed areas to provide extra durability where needed. To prevent wet snow from soaking up, the bottom hem is reinforced with 200D recycled GORE-TEX. Together, these three materials create the perfect balance between weight, comfort, durability and sustainability.

This is a softshell pant designed for high-intensity or spring season free ski mountaineering. It has a clean design where comfort and mobility is key, combined with achieving the right balance of air permeability and protection. It provides all essential features, and has customized features such as elastic snow gaiter with webbing and backer, so can be customized to different boots. It's also waterproof on the knees due to an extra liner, so you can comfortably sit on your knees without risking any soaking.

The pants have a regular fit with articulated knees to ensure great mobility.

Other features: Custom-fit waist system™, zip fly with snap button waist closure, two hand pockets, stretchable narrow thigh pocket, side vent with internal mesh, lumbar pocket for phone, reinforced water and snow shedding instep/bottom leg.

Material	69% recycled nylon, 19% recycled polyester, 12% elastane

lyngen cotton Pants M's

2012-22

A durable windproof cotton-rich ski/snowboard pant developed for ski touring.

These cotton pants are developed for ski touring, but also work perfectly for mountain skis and touring. The main fabric is a premium recycled cotton mix quality, and we use this because it offers great breathability, windproofness, and durability on both cold and warm dry days.

The 75% organic cotton/ 25% recycled polyester mix offers the natural properties of cotton but has added extra strength, durability, and faster drying due to the polyester. The pants are reinforced on the bottom leg with a 200D waterproof 2-layer recycled nylon face fabric for extra durability and to prevent a soggy bottom hem.

Key features include a Custom-fit waist system™, a silicon strip to prevent gaps and friction, mesh lines ventilation from hip to knee, zippered hand and back pocket and a waterproof membrane on the inside of the knees to provide extra windproofness and stay comfortable while sitting down on the snow.

Snap tightening under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom has a zip with a gusset to fit both walk and ski mode, and it has an adjustable snow gaiter with webbing. The pants are compatible with our snap-in system and are also a perfect combo with the lyngen Gore-Tex paclite pants.

The pants have a regular fit with articulated knees and seat for optimal touring mobility.

NEW

lyngen Alpha100 Zip Hood M's 2011-22

Our most breathable insulation jacket.

This lightweight midlayer is made for ski touring but is also great for general outdoor, especially mid to high-intensity activities due to its excellent breathing and insulation properties.

The face fabric is a lightweight double weave recycled nylon aero100 fabric, because it provides a very good combination of low weight, breathability, and wind protection, plus a little bit of stretch for better movement. It's a durable 20D ripstop quality with PFC-free DWR treatment for additional water resistance.

The jacket is lined with premium Polartec® Alpha® insulation, the world-leading breathable insulation engineered to provide consistent warmth, while continuously releasing excess body heat, and allowing greater breathability during activity. It insulates the user when highly aerobic as well as when less active.

For optimal performance, we've used two Polartec® Alpha® qualities: The body is lined with Polartec® Alpha® 90 (90 grams/m2) while the shoulder area, which has a more demanding muscle group, is in a thicker Polartec® Alpha® 120 (120 grams/m2) quality. This is also more resistant to compression from backpack straps.

Features include hand pockets and a chest pocket with zipper closure, helmet-compatible hood with one-hand adjustment and a stiffer brim for better wind protection, an inner placket to prevent cold spots, and an elastic bottom hem.

The jacket has a technical fit with a Y-cut and articulated arms for good movement, with slight ease to give it a bit more jacket-like function.

lyngen Alpha90 Vest M's

2036-18

Our most breathable insulation vest.

This dynamic and highly breathable vest is developed for ski touring but is the all-time go-to garment when you are in need of some breathable extra insulation that adds minimal weight and volume.

The vest is perfect for the uphill climb to a long-desired peak or underneath your favorite shell jacket when the cold is creeping in on you.

The face fabric is a woven recycled polyester because it provides a very good combination of weight, breathability, and wind protection. It's a durable 20D ripstop quality with PFC-free DWR treatment for additional water resistance.

The vest is lined with premium Polartec® Alpha® 90g/m2 insulation, the world-leading breathable insulation engineered to provide consistent warmth, while continuously releasing excess body heat, and allowing greater breathability during activity. It insulates the user when highly aerobic as well as when less active.

Other features include elastic hem adjustments, an adjustable hood with room for a helmet and handy pockets to hide away your phone, an extra carabineer, or a snack bar.

It's a ski touring favorite, but also an employee go-to all year.

lyngen Gore-Tex Paclite Overpants W's
2014-22

Lightweight, packable, and waterproof ski touring over pants.

These protective over pants are made for ski touring and are the ultimate bring-along pant when touring on days with uncertain weather and you don't wish to wear waterproof pants all the time. They are also suitable for general all-year mountaineering and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

We use the GORE-TEX PACLITE® 4 PLUS fabric – a soft, lightweight tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being durably waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include full side 2-way zippers to make them easier to put on and off, snap solution in the waist to keep the zippers all open while still keeping the pants in place, an elastic band in the back, internal webbing adjustment in the front, zip-fly and zippered pockets. Velcro® adjustment under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom hem has an elastic cord for adjustment and a snap closure to tighten it if needed. The pants are suspender compatible.

The pants have a technical fit with articulated knees and seat for optimal touring mobility. The lower legs are on the wider side, as they are made to be put on top of ski touring boots.

It offers great protection, lightweight and great breathability – perfect for ski touring and other high-intensity activities. It has a PFC/CO-treatment with a 20.000 water column. The pocket is not waterproof. The 60g/m2 100% recycled polyester insulation is distributed in a t-shirt shape to ensure great warming properties where it is most needed: body and half sleeve is 60g/m2, rest is 40g/m,.

This premium insulation jacket is the perfect hybrid between an insulated jacket and a super lightweight waterproof and breathable shell jacket. It's developed as an uncompromising insulation jacket with high emphasis on weight, feel and thermal properties. It's what you bring for the adventures when the weather is rough or as a backup combo jacket during ski touring and touring in the spring. To keep the weight down and lower the packing volume, it has a minimalistic design and only the essential features.

Technical fit with articulated sleeves and great sleeve moveability. Fits on top as well as under a shell jacket and has a helmet compatible hood.

Two mid-mounted pockets that do not come in conflict with shoulder straps and hip belts, YKK zippers, one zipped inner pocket that can fit a wallet or cell phone, one inside mesh pocket, smooth fleece backer next-to-skin for soft comfort, elasticated cuffs, one-hand hem adjustment with a flat front.

lyngen down850 Hood W's 2005-20

Our best warmth to weight down jacket developed for ski touring.

Making sure you stay warm when ascending new peaks, the lyngen down850 Jacket is the ultimate insulation garment when out ski touring. With a great warmth-to-weight ratio, this down jacket is our lightest down with a hood and will keep the backpack's weight down and can easily be compressed into a packable pocket.

The jacket is made of lightweight, down-proof 10D recycled nylon and has RDS 2.0 850 FP down fill.

Practical features include a hood with one-hand adjustment with room for a helmet, an outer chest pocket, hem tightening, and Powerstretch cuffs.

lyngen down850 Knickers W's

2007-20

Our warmest and most packable knickers developed for ski touring.

This highly functional midlayer is made with RDS 2.0 850 down fill and a lightweight down-proof recycled 10D nylon face. With a full zip solution, these pants can easily be put on and taken off without removing your ski boots, either on top or underneath your shell pants. The pants are easy to compress down and can be packed into a tiny, separate bag.

The zippers on the side are coordinated so you will not use valuable time trying to match them up and the Custom-fit waist™ system makes them both comfortable and easily adjustable.

The seat is insulated with Primaloft to ensure that the butt is kept warm even if you tear a hole.

lyngen flex1 Pants W's 2018-21

Breathable and durable ski/snowboard soft shell pants developed for ski touring.

These highly stretchable ski pants are made in a windproof recycled nylon/recycled polyester/elastane mix which ensures great flexibility and comfort. They are reinforced with a recycled polyamide/polyester/elastane mix on exposed areas to provide extra durability where needed. To prevent wet snow from soaking up, the bottom hem is reinforced with 200D recycled GORE-TEX. Together, these three materials create the perfect balance between weight, comfort, durability and sustainability.

This is a softshell pant designed for high-intensity or spring season free ski mountaineering. It has a clean design where comfort and mobility is key, combined with achieving the right balance of air permeability and protection. It provides all essential features, and has customized features such as elastic snow gaiter with webbing and backer, so can be customized to different boots. It's also waterproof on the knees due to an extra liner, so you can comfortably sit on your knees without risking any soaking.

The pants have a regular fit with articulated knees to ensure great mobility.

Other features: Other features: Custom-fit waist system™, zip fly with snap button waist closure, two hand pockets, stretchable narrow thigh pocket, side vent with internal mesh, lumbar pocket for phone, reinforced water and snow shedding instep/bottom leg.

Material	69% recycled nylon, 19% recycled polyester, 12% elastane

NEW
lyngen equaliser stretch Tights W's
2017-22

Windproof, stretchy tights developed for ski touring.

These technical tights are made for ski touring but also work perfectly for mountaineering, climbing, and trekking activities where you use larger boots. They're made to offer the next-to-skin comfort and movement of tights, and the functionality of ski pants.

The main fabric is a brushed, quick-drying, recycled nylon/elastane mix, and we use this because it offers excellent movement, breathability, and moisture-wicking properties. The thickness of the fabric is great for all-season use and makes it a good choice on dry spring-like days as well as dry cold days with high-intensity activities.

The pants are reinforced on the bottom leg with a 200D waterproof 2L fabric for extra durability and to prevent a soggy bottom hem.

Key features include a high, comfortable waist with a little coin pocket and lace for tightening, big stretch pockets on the thighs, and an adjustable bottom leg with a gusset to accommodate walk mode and ski mode. They also have integrated stretch snow gaiter

The fit is tight with articulated knees for optimal touring mobility, and it has a flattering bootcut silhouette.

NEW
lyngen Alpha100 Zip Hood W's
2047-22

Our most breathable insulation jacket.

This lightweight midlayer is made for ski touring but is also great for general outdoor, especially mid to high-intensity activities due to its excellent breathing and insulation properties.

The face fabric is a lightweight double weave recycled nylon aero100 fabric, because it provides a very good combination of low weight, breathability, and wind protection, plus a little bit of stretch for better movement. It's a durable 20D ripstop quality with PFC-free DWR treatment for additional water resistance.

The jacket is lined with premium Polartec® Alpha® insulation, the world-leading breathable insulation engineered to provide consistent warmth, while continuously releasing excess body heat, and allowing greater breathability during activity. It insulates the user when highly aerobic as well as when less active.

For optimal performance, we've used two Polartec® Alpha® qualities: The body is lined with Polartec® Alpha® 90 (90 grams/m²) while the shoulder area, which has a more demanding muscle group, is in a thicker Polartec® Alpha® 120 (120 grams/m²) quality. This is also more resistant to compression from backpack straps.

Features include hand pockets and a chest pocket with zipper closure, helmet-compatible hood with one-hand adjustment and a stiffer brim for better wind protection, an inner placket to prevent cold spots, and an elastic bottom hem.

The jacket has a technical fit with a Y-cut and articulated arms for good movement, with slight ease to give it a bit more jacket-like function.

lyngen Alpha90 Vest W's 2041-18

Our most breathable insulation vest.

This dynamic and highly breathable vest is developed for ski touring but is the all-time go-to garment when you are in need of some breathable extra insulation that adds minimal weight and volume.

The vest is perfect for the uphill climb to a long-desired peak or underneath your favorite shell jacket when the cold is creeping in on you.

The face fabric is a woven recycled polyester because it provides a very good combination of weight, breathability, and wind protection. It's a durable 20D ripstop quality with PFC-free DWR treatment for additional water resistance.

The vest is lined with premium Polartec® Alpha® 90g/m2 insulation, the world-leading breathable insulation engineered to provide consistent warmth, while continuously releasing excess body heat, and allowing greater breathability during activity. It insulates the user when highly aerobic as well as when less active.

Other features include elastic hem adjustments, an adjustable hood with room for a helmet and handy pockets to hide away your phone, an extra carabineer, or a snack bar.

It's a ski touring favorite, but also an employee go-to all year.

Mountaineering

We divide our mountaineering category into three concepts; **trollveggen**, **falketind**, and **lyngen**. Developed to master big walls, long climbs, and various conditions, each garment is created to push the limits of protection, durability, and mobility.

trollveggen alpine climbing

Descending from Europe's first Gore-Tex jacket in 1977, the trollveggen Gore-Tex jacket and bib revolutionized clothing for alpine climbing. Developed for first ascents and demanding expeditions, it's continually refined and still a pinnacle of mountaineering performance. Named after the wall where it was first tested.

trollveggen Gore-Tex Pro Jacket M's

1603-19

Our most durable waterproof mountaineering jacket.

The trollveggen Gore-Tex Pro is our pinnacle of mountaineering performance made with extremely durable 70D recycled nylon Gore-Tex Pro fabric. This iconic jacket is historic, dating back to Europe's first Gore-Tex® jacket in 1977. Today, it's still a legend within mountaineering due to continuous user-driven product development. With the new generation, we've redesigned the construction, decreasing the number of parts and seams to provide a more ergonomic fit and allow more efficient movement.

This also increases durability due to fewer exposed connection areas. As a bonus, it looks cleaner while still offering everything you need for any alpine pursuit. It's made in a new recycled Gore-Tex 70D wave fabric and we've added additional length in the back for extra protection.

The jacket has long underarm two-way zippers to provide good ventilation. The storm fitted hood fits a climbing helmet and the two napoleon chest pockets are kept high to avoid interference when using a harness.

The two hand pockets offer extra storage and a hand-warming option when belaying, and also conceals an adjustment cord which can tighten the waistline to trap air if needed.

Despite the longer fit and extra pockets, we've managed to match the weight of the previous generation. It has reflective details and we've strategically placed color blocks on the dark jacket to ensure visibility and contrast on critical body parts.

trollveggen Gore-Tex Pro Bib M's

1604-19

Our most durable waterproof mountaineering bib pants.

The trollveggen Gore-Tex Pro Bibs are our most durable mountaineering pants and the first choice of alpine adventurers who climb under harsh conditions. Made to offer big mountain perfection, these high-rise bib pants have never rested on their laurels but continuously been perfected to meet the needs of alpine explorers.

Engineered to withstand wind, water and abrasion, we've used very durable and recycled 70D X160D Gore-Tex fabric. The Vectran reinforcement on the lower leg will reduce wear and tear from crampons, and thanks to the detachable gaiters and zipped lower leg gusset you can easily customize the pants to fit your needs for both summer climbs and lightweight rando boots.

We've improved the ergonomic leg and seat construction, creating an ergonomic S-shape to improve movement and decrease excess fabric. By moving the seams to the front, we've managed to build a joint-like cap function to the knee area increasing both comfort and mobility. The drop seat function does not only facilitate effortless toilet visits, but also provides great ventilation thanks to the two-way zippers.

Other key features include a stretchy back, adjustable suspenders, a thigh pocket and front bib pockets which conceals an adjustment cord which can tighten the waistline if needed.

trollveggen Gore-Tex Pro Light Jacket M's 1605-22

Our lightest, durable waterproof mountaineering jacket.

This lightweight mountaineering jacket is made for demanding alpine climbing but works perfectly for all-season mountaineering adventures including trekking and ski touring. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

This jacket is made in a 3L 40D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. It is reinforced with 3L 70D GORE-TEX® PRO (RET 6) fabric with 100% recycled nylon face to ensure maximum protection on the top hood, shoulders, and elbow panel.

Main features include a storm hood fitted for a climbing helmet with one-hand adjustment, asymmetric cuffs with Velcro® adjustments, two-way under-arm ventilation, strategically placed napoleon pockets to avoid interference with harness and backpack, and a two-way front zip for flexible ventilation.

The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection.

trolveggen Gore-Tex Pro Light Pants M's 1606-22

Our lightest, durable waterproof mountaineering pants.

These lightweight mountaineering pants are made for demanding alpine climbing, but works perfectly for all season mountaineering adventures, both with or without skis and crampons. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

The main fabric is a 3L 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. On the upper part, which is less exposed, we use a 3L 40D GORE-TEX® PRO most breathable (RET 6) 3-layer, 40D recycled nylon that is thinner and gives less bulk.

Main features include a functional 1/2 side two-way zipper for good venting options, Custom-fit waist system™, two zippered thigh pocket, adjustable ankle width, a bootlace hook, Vectran reinforcement on lower leg, and eyelets if you want to fasten a cord around the boot to make sure it stay in place. The pants are suspender and bib compatible. The pants have a regular fit with articulated knees and an ergonomic S-shape to improve mobility during vertical movement and decrease excess. The bottom legs can be expanded to fit ski touring boots.

trollveggen Primaloft100 Zip Hood M's 1620-19

Our warmest and most durable synthetic insulated mountaineering jacket.

Introducing the revolutionizing, recycled PrimaLoft Gold Aerogel insulation, the jacket offers an outstanding warmth-to-weight ratio. Aerogel is known as the world's lightest solid, and with the PrimaLoft Gold Aerogel, they've managed to utilize its great insulation properties into outdoor gear.

To ensure maximum performance, we've mapped out different key areas of the upper body and used this to place extra insulation where it's needed. The outer fabric is a durable, lightweight rip-stop nylon Cordura ideal for rough surfaces and is highly windproof and water repellent.

This creates a jacket that can take a hit as a standalone outer-layer as well as a warm and protective midlayer. Practical features include a wind hood which fits a climbing helmet, hand warming pockets with extra insulation thanks to the quilted front, inner pocket and longer cut back to prevent gaps.

This down-like product is the go-to midlayer for any mountaineer with no room for compromises.

trolveggen Powerstretch Pro Zip Hood M's 1623-19

Our warmest and most durable stretchy midlayer.

The trolveggen Powerstretch Pro Zip Hoodie is a flexible and comfy insulation layer made for alpine adventures where both the altitude and temperature tend to switch between high and low.

The unique mix of polyester/wool blend and Powerstretch Pro provides the product with great properties; the polyester/wool under the arms and in the back has a great thermal regulation, odor reduction and will keep you warm even when wet.

The highly durable Powerstretch Pro material will withstand a great deal of wear and tear and provides quick-drying properties. It has a snug and ergonomic fit to maximize mobility in steep and difficult terrain.

Other key features include cuff with horizontal thumb hole for comfy fit, 4 pockets; two on the side and two on the chest, a protective hood that can fit underneath a helmet and easily is used together with a harness.

trolveggen warmwool² stretch Tights M's 1624-19

Our warmest stretchy midlayer pants.

The trolveggen warmwool² stretch Tights are highly functional tights ideal for alpine adventures where both the altitude and temperature tend to switch between high and low.

The unique polyester/wool mix provides great thermal regulation, impeccable comfort, and natural odor reduction. The full-length zippers make them super easy to take on and off and are color coordinated to prevent loss of valuable time trying to match them up.

The tights have an athletic fit, following the joints and the movements of climbing to ensure maximum mobility. Due to the durable material mix, they can be worn as a solo layer on warmer days and we can highly recommend them as a downtime snug pant for lazy days.

The tights also have a thigh pocket with zipper and a flexible waistband. Men's have a fly with zipper.

trollveggen Gore-Tex Pro Light Jacket W's 1625-22

Our lightest, durable waterproof mountaineering jacket.

This lightweight mountaineering jacket is made for demanding alpine climbing but works perfectly for all-season mountaineering adventures including trekking and ski touring. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

This jacket is made in a 3L 40D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. It is reinforced with 3L 70D GORE-TEX® PRO (RET 6) fabric with 100% recycled nylon face to ensure maximum protection on the top hood, shoulders, and elbow panel.

Main features include a storm hood fitted for a climbing helmet with one-hand adjustment, asymmetric cuffs with Velcro® adjustments, two-way under-arm ventilation, strategically placed napoleon pockets to avoid interference with harness and backpack, and a two-way front zip for flexible ventilation.

The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection.

trollveggen Gore-Tex Pro Light Pants W's 1628-22

Our lightest, durable waterproof mountaineering pants.

These lightweight mountaineering pants are made for demanding alpine climbing, but works perfectly for all season mountaineering adventures, both with or without skis and crampons. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

The main fabric is a 3L 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. On the upper part, which is less exposed, we use a 3L 40D GORE-TEX® PRO most breathable (RET 6) 3-layer, 40D recycled nylon that is thinner and gives less bulk.

Main features include a functional 1/2 side two-way zipper for good venting options, Custom-fit waist system™, two zippered thigh pocket, adjustable ankle width, a bootlace hook, Vectran reinforcement on lower leg, and eyelets if you want to fasten a cord around the boot to make sure it stay in place. The pants are suspender and bib compatible. The pants have a regular fit with articulated knees and an ergonomic S-shape to improve mobility during vertical movement and decrease excess. The bottom legs can be expanded to fit ski touring boots.

trollveggen Primaloft100 Zip Hood W's 1630-19

Our warmest and most durable synthetic insulated mountaineering jacket.

Introducing the revolutionizing, recycled PrimaLoft Gold Aerogel insulation, the jacket offers an outstanding warmth-to-weight ratio. Aerogel is known as the world's lightest solid, and with the PrimaLoft Gold Aerogel, they've managed to utilize its great insulation properties into outdoor gear.

To ensure maximum performance, we've mapped out different key areas of the upper body and used this to place extra insulation where it's needed. The outer fabric is a durable, lightweight rip-stop nylon Cordura ideal for rough surfaces and is highly windproof and water repellent.

This creates a jacket that can take a hit as a standalone outer-layer as well as a warm and protective midlayer. Practical features include a wind hood which fits a climbing helmet, hand warming pockets with extra insulation thanks to the quilted front, inner pocket and longer cut back to prevent gaps.

This down-like product is the go-to midlayer for any mountaineer with no room for compromises.

falketind Gore-Tex Jacket M's 1802-21

Our most versatile waterproof jacket.

This bestselling Gore-Tex Jacket is one of our lightest versatile shell jackets made for all seasons and any weather, initially designed for lightweight mountaineering. The wind and waterproof jacket is durable enough for winter use and light enough for the summertime. The light, recycled GORE-TEX® fabric with a smooth backer, makes it great for a weekend up in the mountains as well as expeditions to your local trails.

The 30D 3-layer recycled, mini ripstop Gore-Tex fabric has a light, yet durable face material for its weight, and a smooth backer. The jacket has a technical fit with a slight Y-shape silhouette for the men to increase mobility, and secure a dynamic look and functionality.

The jacket has a regular fit with a silhouette designed to increase mobility, and ensure a dynamic look and functionality.

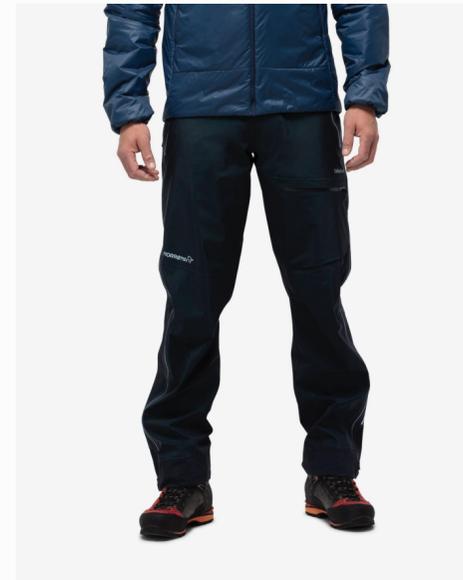

Critical features include long underarm vents, articulated sleeves, mid-mounted pockets, storm hood fitted for a helmet, and asymmetric cuffs for better weather protection. This is an excellent choice for the outdoor enthusiast in search of a very versatile and lightweight all-season jacket.

falketind Gore-Tex Paclite Jacket M's 1812-22

Our lightest, most packable waterproof shell jacket.

This lightweight shell jacket is made for all-year mountaineering, but works great for general outdoor activities all year, from trekking to ski touring. It's very packable and therefore easy to always bring along. We use a GORE-TEX® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

This jacket is made in GORE-TEX PACLITE® PLUS fabric – a soft, lightweight (75/g m2) tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

Main features include a helmet-compatible hood with one-hand adjustment, cuffs with Velcro® adjustments, an elastic bottom hem, a zippered chest pocket, and zippered front chest ventilation. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind down750 Hood M's 1833-20

Our most versatile down jacket.

The falketind down750 Hood Jacket is made for all-season use. The jacket is lightweight and can be compressed into its own pocket which makes it a perfect bring-along insulating piece. The face fabric is recycled 20D nylon with PFC free water repellency, and the down is traceable and RDS certified.

This jacket works perfectly as an outer layer on cold summer days as well as midlayer during the winter. To prevent heat-loss in moist conditions, the sides, neck and lower arms have synthetic insulating.

The down is distributed in a t-shirt shape to ensure great warming properties where it is most needed. The shoulder piece is made of a combination of down and synthetic material to ensure durability in this exposed area. The shoulders and sleeves are reinforced in a 45D recycled nylon for long-lasting durability.

Other features include hand warming pockets, chest pocket, adjustable hood, and elastic cuffs.

falketind thermo60 Hood M's

1804-22

Our warmest, most versatile lightweight synthetic insulation jacket.

This lightweight insulation jacket is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use our aeroDownproof face fabric to provide windproofness, lightweight and soft touch, and our thermo60 synthetic insulation which offers great warmth-to-weight values, good packability and will provide insulation even when wet.

The thermo60 insulation used is a 60g/m² 100% recycled polyester insulation which gives great thermal insulation to help the body to maintain its temperature, hence minimizing energy loss. The main face fabric is a windproof 20D recycled nylon ripstop fabric, and the shoulders, arms, and hood are reinforced with a durable and structured 30D lightweight rip-stop nylon Cordura for extra protection and durability. Both have PFC-free DWR treatment for additional water resistance.

Main features include a helmet-compatible hood with one-hand adjustment, a chest pocket with zipper, two hand pockets, and elastic cuffs. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. It's made to fit over and under the falketind Gore-Tex Jacket and is slightly short in length.

falketind thermo40 Shorts M's

1810-21

Our most versatile and flexible insulation shorts.

Providing windproofness and water-resistance, the main fabric is a lightweight recycled 20D nylon. It's also highly packable, and durable for its weight, making it perfect for a bring-along insulation shorts. The main insulation is a recycled thermo40 with a thermo60 in the seat. The thermo40 insulation provides great insulation even when it is damp, has a high warmth-to-weight ratio and is the most packable insulation product in our range.

The shorts is the sibling to our falketind thermo60 Hood, providing the perfect balance between insulation, light weight and packability for your lower body. It's an all-season, windproof insulation garment which works great as an outer layer or underneath a shell pant. With a full zip solution, these pants can easily be put on and taken off without removing your shoes/pants, and the zippers on the side are coordinated so you will not use valuable time trying to match them up. It compresses into a packable pocket on the thigh, which makes it super easy to bring along.

The shorts have a technical fit yet fit over pants or shorts. It has an above knee cap length and a quilted front around the hip flexors to lock the insulation in place in this area and achieve natural folds.

Other features: elasticated waistband, front fly with zip snap button closure, one zippered thigh pockets.

falketind warm2 Octa Hood M's 1815-22

A highly breathable wind-resistant versatile midlayer.

This innovative midlayer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind Octa Jacket M's

1806-20

The unique falketind Octa Jacket is an all-year insulation piece offering low weight, great breathability, dynamic functionality and comfortable protection.

With its sleek design and impeccable functionality, it can be worn alone or in combination with an outer layer both spring, summer, and fall or during high-intensity activities in the winter.

The unique Octa lining provides great insulation even when wet and it's very quick drying thanks to its construction and its multichannel fibers; It is very open, allowing a continuously release of body heat to keep you comfortable during your activities.

The recycled Pertex face fabric offers comfort stretch, great wind resistance, and water repellency. Side panels and cuffs made in flexible warm1 stretch ensure a good and athletic fit and prevent bulkiness.

Other features include a warm and weather protective collar, two spacious mid-mounted pockets for easy access and one-handed elastic adjustment in the hem. It's a very dynamic jacket for all-activity use and especially suitable for mid to high-intensity pursuits like trail running both winter and summer.

falketind warmwool2 stretch Zip Hood M's 1820-20

Our most versatile stretchy mountaineering midlayer.

The jacket is highly stretchable, and the main fabric is a recycled polyester and wool mix with excellent thermal properties and good breathability. It offers great moisture transport when you decide to increase your pace and dries up fast when hung up thanks to the polyester.

The highly durable piece is suitable for everything from everyday strolling at your favorite outdoor destination to hardcore active use. We've given the fabric a resin surface treatment for extra pill resistance and enhanced durability. It has a comfy fit and clean look that will work at whatever, whenever.

Practical features include a functional hood, two mid-mounted pockets that won't interfere with shoulder straps and hip belt, a chest pocket, comfy cuffs, a one-hand adjustable elastic hem and a clean, snug collar. If you're only investing in one hooded midlayer for now, we suggest you go for this one.

falketind Alpha120 Zip Hood M's 1815-20

Our most breathable and quick-drying midlayer.

This zip hood is a durable midlayer with great warmth-to-weight properties. It is perfect for the high-intensity adventures as the Polartec® Alpha120 fabric provides excellent warmth and moisture transport.

To make sure your motion range is optimized, as well as decreasing the fabric mass in strategic places, we have added Polartec® Power Grid fabric under the arms and down the sides.

This fabric has great stretch, breathability, and moisture-wicking. It has an athletic and slim fit and has integrated hand gaiters, hand warming pockets, and an insulating hood.

falketind flex1 heavy duty Pants M's

1863-20

Our most durable mountaineering hiking pants.

The hard-wearing falketind heavy duty Pants are inspired by the original fjørå flex1 and will probably become your go-to favorites for general outdoor pursuits.

They're made with recycled, flexible polyester flex™1 fabric reinforcement in the knees, seat, and front leg. This ensures a great range of movement, in addition, to keep you sealed when the wind increases or during light showers.

They have a full-length two-way zipper running from the waist and down so you can customize the pants to suit your needs; The top half from the hip to the knee is an open construction lined with mesh while the bottom is lined with fabric like a classic gusset. This also enables a wider fit from the knee down or an all-over wider fit with ventilation on top. You can also tighten the lower leg with our Velcro adjustment if you're more into a slim fit. Other features include a custom fit waist system, two hand pockets, a hidden gaiter hook, and a practical thigh pocket

The design is clean, versatile and is suitable for a wide variety of outdoor activities.

Material	100% recycled nylon
Material 2nd	91% recycled nylon, 9% elastane

falketind flex1 Pants M's

1810-20

Our lightest and most breathable mountaineering hiking pants.

The bestselling falketind flex1 Pants are our most versatile soft shell pants developed for light mountaineering and general outdoor activities – all year.

With their flexible fit and functional fabric, they have become a favorite amongst both customers, employees, and ambassadors who seek comfy and lightweight durability. The pants are soft and stretchable with a surface providing wind-resistance and great water repellency to make sure fresh breeze and light pouring won't be an issue. Combined with excellent breathability, they are perfect all-season pants for the outdoor enthusiast who likes to break a sweat every once in a while.

It's made in a recycled flex1 fabric and laminated and stitched pockets. The new, flexible lower leg solution has a zipper closed gusset to increase the areas of use. It can be adjusted to fit closely with low-cut hiking shoes or widened to fit a buckled randonee boot.

Other features include a Custom-Fit waist System, mesh lined ventilation from the hips to the knee, two hand pockets, a back pocket, and a thigh pocket – all with zippers. They also have a hidden gaiter hook on the inside of the lower leg hem. The pants can easily be worn with a base layer under in wintertime.

falketind Gore-Tex Jacket W's 1804-21

Our most versatile waterproof jacket.

This bestselling Gore-Tex Jacket is one of our lightest versatile shell jackets made for all seasons and any weather, initially designed for lightweight mountaineering. The wind and waterproof jacket is durable enough for winter use and light enough for the summertime. The light, recycled GORE-TEX® fabric with a smooth backer, makes it great for a weekend up in the mountains as well as expeditions to your local trails.

The 30D 3-layer recycled, mini ripstop Gore-Tex fabric has a light, yet durable face material for its weight, and a smooth backer. The jacket has a technical fit with a slight Y-shape silhouette for the men to increase mobility, and secure a dynamic look and functionality.

The jacket has a regular fit with a silhouette designed to increase mobility, and ensure a dynamic look and functionality.

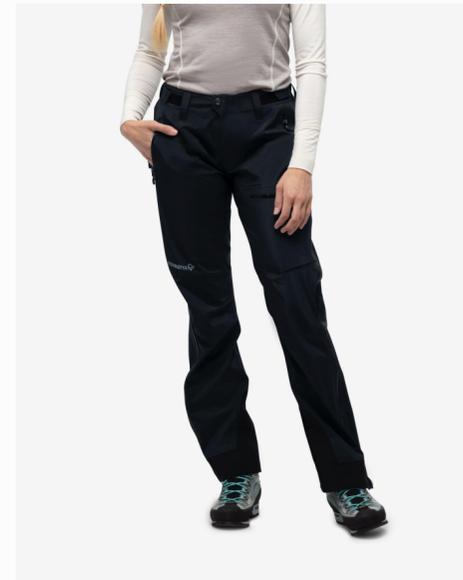

Critical features include long underarm vents, articulated sleeves, mid-mounted pockets, storm hood fitted for a helmet, and asymmetric cuffs for better weather protection. This is an excellent choice for the outdoor enthusiast in search of a very versatile and lightweight all-season jacket.

falketind Gore-Tex Paclite Jacket W's 1814-22

Our lightest, most packable waterproof shell jacket.

This lightweight shell jacket is made for all-year mountaineering, but works great for general outdoor activities all year, from trekking to ski touring. It's very packable and therefore easy to always bring along. We use a GORE-TEX® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

This jacket is made in GORE-TEX PACLITE® PLUS fabric – a soft, lightweight (75/g m2) tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being waterproof, windproof, and offers excellent breathability. It has printed dots on the back with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

Main features include a helmet-compatible hood with one-hand adjustment, cuffs with Velcro® adjustments, an elastic bottom hem, a zippered chest pocket, and zippered front chest ventilation. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind down750 Hood W's 1870-20

Our most versatile down jacket.

The falketind down750 Hood Jacket is made for all-season use. The jacket is lightweight and can be compressed into its own pocket which makes it a perfect bring-along insulating piece. The face fabric is recycled 20D nylon with PFC free water repellency, and the down is traceable and RDS certified.

This jacket works perfectly as an outer layer on cold summer days as well as midlayer during the winter. To prevent heat-loss in moist conditions, the sides, neck and lower arms have synthetic insulating.

The down is distributed in a t-shirt shape to ensure great warming properties where it is most needed. The shoulder piece is made of a combination of down and synthetic material to ensure durability in this exposed area. The shoulders and sleeves are reinforced in a 45D recycled nylon for long-lasting durability.

Other features include hand warming pockets, chest pocket, adjustable hood, and elastic cuffs.

falketind thermo60 Hood W's 1857-22

Our warmest, most versatile lightweight synthetic insulation jacket.

This lightweight insulation jacket is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use our aeroDownproof face fabric to provide windproofness, lightweight and soft touch, and our thermo60 synthetic insulation which offers great warmth-to-weight values, good packability and will provide insulation even when wet.

The thermo60 insulation used is a 60g/m² 100% recycled polyester insulation which gives great thermal insulation to help the body to maintain its temperature, hence minimizing energy loss. The main face fabric is a windproof 20D recycled nylon ripstop fabric, and the shoulders, arms, and hood are reinforced with a durable and structured 30D lightweight rip-stop nylon Cordura for extra protection and durability. Both have PFC-free DWR treatment for additional water resistance.

Main features include a helmet-compatible hood with one-hand adjustment, a chest pocket with zipper, two hand pockets, and elastic cuffs. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. It's made to fit over and under the falketind Gore-Tex Jacket and is slightly short in length.

falketind thermo40 shorts W's

1811-21

Our most versatile and flexible insulation shorts.

Providing windproofness and water-resistance, the main fabric is a lightweight recycled 20D nylon. It's also highly packable, and durable for its weight, making it perfect for a bring-along insulation shorts. The main insulation is a recycled thermo40 with a thermo60 in the seat. The thermo40 insulation provides great insulation even when it is damp, has a high warmth-to-weight ratio and is the most packable insulation product in our range.

The shorts is the sibling to our falketind thermo60 Hood, providing the perfect balance between insulation, light weight and packability for your lower body. It's an all-season, windproof insulation garment which works great as an outer layer or underneath a shell pant. With a full zip solution, these pants can easily be put on and taken off without removing your shoes/pants, and the zippers on the side are coordinated so you will not use valuable time trying to match them up. It compresses into a packable pocket on the thigh, which makes it super easy to bring along.

The shorts have a technical fit yet fit over pants or shorts. It has an above knee cap length and a quilted front around the hip flexors to lock the insulation in place in this area and achieve natural folds.

Other features: elasticated waistband, front fly with zip snap button closure, one zippered thigh pockets.

falketind warm2 Octa Hood W's 1816-22

A highly breathable wind-resistant versatile midlayer.

This innovative midlayer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind Octa Jacket W's

1858-20

The unique falketind Octa Jacket is an all-year insulation piece offering low weight, great breathability, dynamic functionality and comfortable protection.

With its sleek design and impeccable functionality, it can be worn alone or in combination with an outer layer both spring, summer, and fall or during high-intensity activities in the winter.

The unique Octa lining provides great insulation even when wet and it's very quick drying thanks to its construction and its multichannel fibers; It is very open, allowing a continuously release of body heat to keep you comfortable during your activities.

The recycled Pertex face fabric offers comfort stretch, great wind resistance, and water repellency. Side panels and cuffs made in flexible warm1 stretch ensure a good and athletic fit and prevent bulkiness.

Other features include a warm and weather protective collar, two spacious mid-mounted pockets for easy access and one-handed elastic adjustment in the hem. It's a very dynamic jacket for all-activity use and especially suitable for mid to high-intensity pursuits like trail running both winter and summer.

falketind warmwool2 stretch Zip Hood W's 1824-20

Our most versatile stretchy mountaineering midlayer.

The jacket is highly stretchable, and the main fabric is a recycled polyester and wool mix with excellent thermal properties and good breathability. It offers great moisture transport when you decide to increase your pace and dries up fast when hung up thanks to the polyester.

The highly durable piece is suitable for everything from everyday strolling at your favorite outdoor destination to hardcore active use. We've given the fabric a resin surface treatment for extra pill resistance and enhanced durability. It has a comfy fit and clean look that will work at whatever, whenever.

Practical features include a functional hood, two mid-mounted pockets that won't interfere with shoulder straps and hip belt, a chest pocket, comfy cuffs, a one-hand adjustable elastic hem, and a clean, snug collar. If you're only investing in one hooded midlayer for now, we suggest you go for this one.

falketind rugged slim Pants W's

1802-22

Our most durable, breathable slim legged softshell pants for mountaineering.

These slim-fit softshell pants are made for all-year mountaineering but are also suitable for general outdoor activities such as trekking and climbing. The main fabric is a 199 gr/m2 flex1 softshell fabric, and we use this because it offers great movement, durability, windproofness, and high breathability. The thickness of the fabric is great for all-year use.

The main material is a 90D recycled double weaved flex1 fabric, our stretchiest double weave quality. It is treated with PFC-free DWR to provide extra wind and water resistance. The thighs, knees, and seat are reinforced with a 160D recycled flex fabric to provide extra protection on exposed areas, and also make the pants perfect for changing conditions.

Main features include a Custom-fit waist system™, a zipped fly with snap closure, two hand pockets with zippers, one thigh pocket, and bottom leg zippers with an internal gusset for adaptability to a different outdoor boot – including hiking boots. They have a flattering, slim fit with articulated knees for good mobility both when trekking, cleaving, and climbing.

A slim legged version of our lightest most breathable mountaineering hiking pants.

They're inspired by an all-time favorite amongst many women, the classic running tights, but made in durable softshell fabric and loaded with outdoor functionality.

The double weaved flex1 fabric is soft and stretchable with a surface providing wind-resistance and great water repellency to make sure fresh breeze and light pouring won't be an issue. Combined with excellent breathability, they are perfect all-season pants for women who don't mind breaking a sweat every now and then.

Other features include a Custom-Fit waist System, two hand pockets with zippers, two back pockets, and a slit on the lower leg to make room for mid-high hiking boots. Despite the tight fit, they can be worn with a base layer under in wintertime.

Norrøna outdoor

Timeless outdoor products for all activities. Created to complement any of our collections, these re-innovated classics offer long-lasting versatility with a "Norrønafied" design. While all other product lines are developed for specific activities, these products make up the perfect all-purpose outdoor base.

Norrøna Gore-Tex down750 Parka Unisex 5204-20

Our warmest and most durable waterproof parka engineered to withstand the absolute coldest conditions on the planet.

The heavy-duty norrøna Gore-Tex down750 Parka offers uncompromising functionality to provide superior protection from extreme cold and severe weather. Made in 70D recycled nylon Gore-Tex fabric with 200D recycled nylon reinforcement and high-quality 750 down, this jacket will deal with any condition. It's designed for sub -30°C surroundings and is equipped with all the features needed on an expedition. There are nine pockets in total; six outer, and three inner. There are zippered napoleons that are easy to handle with mittens, two hand warming pockets on the side with snow-proof envelope closure, two lower pockets with flap and zipper, and an arm pocket with a velcro patch on the outside. The double front plackets ensure complete wind and waterproofness. Inside, there is zipped mesh, large mesh, and a mobile pocket.

The certified down fill is box constructed and the shell is taped. While it's primarily down-insulated, it has secondary synthetic insulation in strategic places such as shoulders and lower back and seat. This provides efficient insulation in areas where the loft often gets compressed, increasing its warming properties. It has an inner snow/wind skirt to secure the heated air stays inside the jacket. The waist is adjustable and you can easily access the cord through the lower pockets. To ensure great mobility and comfort, we've added practical side zippers. Other features include a reflective panel all over the chest and back for good visibility, Velcro adjustable cuffs optimized for a perfect seal function and storm hood with flexible brim.

The style is unisex and is based on men's sizing.

Norrøna warmwool3 Hood M's

5213-22

Our most wool rich versatile outdoor/hiking midlayer.

This classic mid-layer is made for all kinds of outdoor activities but is also suitable for everyday wear due to its clean look and comfy feel. It's made in a heavier weight wool/recycled synthetic mix because it offers excellent warmth and durability.

The premium warmwool3 fabric weighs between 300 and 400 grams/m2 and emphasizes the wool's natural thermal properties and the durability, low weight, and moisture-wicking performances of synthetics. The unique construction traps warm air without stopping moisture transport, and when used alone, it's open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Key features include a chest pocket with zipper closure, elastic cuffs with thumb holes, zippered hand-warming pockets, inside hang loop, elasticated hem, and a hood fitted for beanie.

The jacket has a regular fit with articulated arms for optimal movement and an asymmetric longer back cut for extra protection.

Norrøna training Pants M's

5233-21

Our most versatile training pants for colder conditions.

The main fabric is a light, durable, and stretchy 50D recycled double weave fabric with good breathability. To provide enhanced durability and extra protection during colder conditions, we've added a windproof and highly water repellent recycled stretch knitted fabric. This laminated fabric is running from the waist and down and will keep the weather out.

These super comfy, semi-fitted jogger pants are made for all kinds of outdoor activities. They are super versatile and will be just as good for more intense activity as a chill-out piece. It's a hybrid between cross country pants, running pants, and general outdoor pants, making it the complete all-purpose training pants.

These pants have a technical, quite slim fit and follow the timeless, clean design expression in our Norrøna collection's casual aesthetic. Articulated knees for easy movement and less bulk at the back of the knee. Gusseted crotch and an extra layer for extra protection in the crotch.

Other features: pull on solution with no front zip, elasticated waist with cord adjustment, zipped front pockets, zipped back pocket, zipped lower legs for easy entry/exit, elasticated cuff hem, reflex prints, low bulky seams.

Mountain Biking

Norrøna's collections for mountain biking anticipate every weather condition. Rain and rough terrain demand functional clothing that will keep you warm and dry without sacrificing range of motion.

fjørå singletrack mountain biking

Launched in 2009 as the world's first dedicated single track mountain bike collection. With a freeride inspired design, bold colors, and innovative features, the collection changed how to dress for mountain biking. Named after the little village on the West coast, where sheep have crafted fantastic trails from the summit to sea.

fjørå dri1 Jacket M's

2207-18

Our lightest waterproof mountain biking jacket

This lightweight jacket is the ultimate weather protective outer layer developed for biking activities. It is made in dri1, which is a waterproof and breathable fabric.,

dri™1 is constructed with face fabric laminated to a printed membrane on the backside. Without needing a liner, it is a soft, ultra-lightweight, low-volume protective material using a hydrophilic system of moisture transportation rather than hydrophilic holes.

Key features include reflective details for improved visibility, under arm vents, neck tightening, chest pocket with an opening for headphones, glued zippers and a longer back to prevent gaps. It compresses easily into a little package ready to be pulled out when rain and wind decide to pay a visit.

fjørå Gore-Tex Infinium Pants M's 2204-18

Our most windproof mountain biking pants

These durable pants are the winter version of the fjørå flex1, developed for singletrack mountain biking.

These pants have a very durable Infinium® fabric in the front, knees and seat to provide warmth and wind protection when winter strikes. The rest of the pants are made of our flexible and comfortable flex1 fabric.

Key features include lightweight silicon grip in the waistband, mesh venting, leg zippers and ankle tightening for a close fit, Custom-Fit Waist™ system, crotch construction fitted for biking, two hand pockets, a thigh pocket and reflective details. With these pants in your wardrobe, mountain biking is definitely a year-around activity.

Material	Gore-Tex® Infinium 3-layer, 70D 85% nylon, 15% elastane
Material 2nd	62% recycled nylon, 32% nylon, 6% elastane
Inseam length	87 cm (size L)

fjørå flex1 Pants M's

2202-20

Our lightest and most breathable mountain biking pants.

These iconic pants were initially designed for mountain biking but soon grew to be a favorite for a variety of outdoor activities due to its great functionality. Due to the durable and flexible flex™1 fabric with reinforcement on the knees and seat, they have a great range of movement and will keep you sealed while biking or when the wind increases.

The main fabric is a 150 gr/m2 flex1 softshell fabric, and we use this because it offers great movement, durability, windproofness, high breathability, and effective moisture transportation. The thickness of the fabric is great for all-year use and offers great water repellency.

Key features include two hand pockets, a thigh pocket and silicon grip in the waistband to keep the pants in place. With a higher waist, you don't have to worry about gaps and buttcracks. Other features include mesh-lined full-length side venting with a two-way zipper, and Velcro ankle tightening if you wish a slimmer fit to prevent interference with the bike.

The pants have a regular fit with articulated knees to improve mobility during vertical movement.

Material	62% recycled nylon, 32% nylon, 6% elastane
Material 2nd	69% recycled nylon, 19% recycled polyester
Inseam length	84 cm (size L)
Weight	386 g

Everyday casual

Hang up the heavy technical gear and do your own thing in comfort and style with everyday basics and activewear. Built with functional twists and solutions, 100% organic cotton, and recycled designs.

/29 everyday casual

/29 consists of T-shirts, accessories, and other cool stuff made especially for comfort and style before, during, and after your favorite activities. On the 29th of April 1929, the outdoorsman Jørgen Jørgensen started producing outdoor equipment, so when we named our essential basics, it seemed natural to play off the number 29.

Norrøna pureUll Zip Neck M's 5270-21

Premium, 100% merino wool baselayer zip neck.

This lightweight wool zip neck is perfect for all outdoor activities, and also suitable for everyday use because of its clean design. It is made in our own pureUll wool, a premium 100% merino quality that provides great thermal properties, comfort and breathability.

The pureUll is an all-natural material made in 100% ultra-fine 18.5 wool micron that offers the perfect balance between performance and non-itching next-to-skin softness. It's a medium-weight (180gr/sqm) single jersey knit which is highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging.

The natural properties of the wool offer great benefits: It is temperature-regulating, retains body heat while transporting moisture away effectively keeping you warm, even when wet, and is also natural odor-resistant. The wool is RWS certified, and it's sewn and knitted in Europe.

Key features include a high, snug collar and a half zip front. The fit is technical and it has articulated arms for good mobility.

Material	100% merino wool, 18,5 microns, 180g/m2

Norrøna pureUll Longs W's

5267-21

Premium 100% merino wool baselayer longs.

These lightweight wool longs are perfect for all outdoor activities, and also suitable for everyday use because of their clean design. They're made in our own pureUll wool, a premium 100% merino quality that provides great thermal properties, comfort and breathability.

The pureUll is an all-natural material made in 100% ultra-fine 18.5 wool micron that offers the perfect balance between performance and non-itching next-to-skin softness. It's a medium-weight (180gr/sqm) single jersey knit which is highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging.

The natural properties of the wool offer great benefits: It is temperature-regulating, retains body heat while transporting moisture away effectively keeping you warm, even when wet, and is also natural odor-resistant. The wool is RWS certified, and it's sewn and knitted in Europe.

The fit is technical with articulated legs and they have a wider, elastic waistband.

Material	100% merino wool, 18,5 microns, 180g/m2
Weight	180 g
Size	XS-XL

norrøna 120L Trolley Bag

5253-21

A durable and highly weather resistant trolley bag in recycled material.

The main fabric is a super durable ECONYL® 450D with a 2000 mm PU coating. The bottom is made in a heavy-duty 900D ECONYL® with a 2000 mm PU coating - the most durable quality of our ECONYL® range. The ECONYL® regenerated nylon is a product contributing to closing the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators, and consumers. The bag has 85mm wheels, which roll easily.

This clean and featured trolley bag offers excellent protection and comfortable transportation and storage for your stuff. It has a minimalistic and characteristic Norrøna design with aluminum hooks and tone-in-tone logos. Instead of the regular telescope handle, we've placed two diagonally handles on the top, which ensure comfortable rolling and prevent the bag from hitting the back of your legs. This also enables easier storage, as you can roll it all the way down since there's no hardware in the back.

It can also be carried as a backpack with its adjustable, padded shoulder straps. These can easily be hidden away when not in use in an "invisible" slit in the front. The front RC zipper is close to full length and provides easy access to all your belongings.

The bag has one big main compartment, with a mesh pocket on each side. It also has a front pocket with a little mesh compartment with a key hook, and on the top, there's a small pocket for business cards or ID papers of some sort.

The back and side are soft padded, and it has a plastic bottom – with a handle for lifting – to achieve extra support and make sure it keeps its shape. The sliders on the zippers are kissing sliders so that you can add a little padlock for extra security. On the top, front, and sides, several handles make it easier to lift and move it around. The T-shaped zipper pullers provide a better grip, perfect if you're wearing gloves or mittens.

norrøna 90L Duffel Bag

5260-21

A durable and highly weather resistant 90L duffel bag in recycled material.

The main fabric of this minimalistic duffel bag is a super durable 450D ECONYL® with a 2000 mm PU coating. The bottom is made in a heavy-duty 900D ECONYL® with a 2000 mm PU coating - the most durable quality of our ECONYL® range. The ECONYL® regenerated nylon is a product contributing to closing the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators, and consumers.

This clean duffel bag offers excellent protection and comfortable carrying and storage for your stuff. It has a minimalistic and characteristic Norrøna design with aluminum hooks and tone-in-tone logos.

It can easily be carried as a backpack with its adjustable, padded shoulder straps and chest strap, but it also has two front handles, plus a top handle. You can also create a smart single-strap solution by binding the two shoulder straps together using the chest strap. The T-shaped zipper pullers provide a better grip, perfect if you're wearing gloves or mittens.

The durable RC WR zipper runs almost all the way across, giving a big opening with easy access to the single compartment. The sliders on the zippers are kissing sliders so that you can add a little padlock for extra security. It can be compressed by using the end hooks on each side.

trolveggen 50L dri Pack

1616-19

The trolveggen 50L dri Pack is our most durable mountaineering backpack developed for activity in steep terrain. It's a weather resistant pack with taped seams and features to fulfill the needs of multi-day trips.

The trolveggen 50L dri Pack is our most durable mountaineering backpack developed for activity in steep terrain. It's a weather resistant pack with taped seams and features to fulfill the needs of multi-day trips.

The laminated top lid is removable and has 3 pockets. Two pockets with access through WR zippers at the top, and one zip pocket at the bottom. If you use the pack without the top lid, the cord draw opening can be covered by an integrated flap in front with zipper pocket.

The main compartment is easily accessible through the top opening and through WR zipper at the side. The pack is featured with 2 ice axe attachments in the front and is hydration compatible with hydration pocket inside.

The laminated shoulder straps with chest strap provide load bearing comfort through ergonomic design and multi-density EVA foam padding. The back length is adjustable, and the carry system is supported with a lightweight integral aluminum frame inside the back.

The removable laminated hip belt in multi-density foam features gear loop and stretch pocket, and the pack is easy to strip down with removable aluminum frame, top lid, hip belt, and compression straps.

trollveggen 40L dri Pack

1633-19

The trollveggen 40L dri Pack is our most durable mountaineering backpack developed for activity in steep terrain.

The trollveggen 40L dri Pack is our most durable mountaineering backpack developed for activity in steep terrain. It is fully seam taped and offers a versatile dri backpack with roll-top closure for watertight closure and compression.

The center top compression strap secures the top opening and can be used when carrying a rope on the outside of the pack. A wide top handle in contrast color is easy to find and grab. The pack has 2 ice ax attachments in front and 4 removable side compression straps.

The Backpack's simple yet efficient carrying system is supported by a 5mm thick insert foam sheet in the back. It has laminated shoulder straps with multi-density EVA foam padding for load-bearing comfort, and removable hip strap in 38mm webbing.

The pack is completed with inside zipper pocket with key-hook for your essentials, and is the number one choice for women who prefers the mountains as their playground.

Iofoten 30L Pack

1050-20

Our most durable, fully featured ski/snowboard pack.

The highly functional pack is designed to carry every freeride essential in the mountains. It has a big main compartment, spacious top compartment, a sectioned compartment for your avalanche equipment, and an easily accessible bottom compartment perfect for crampons and a rope. It's made for carrying both ski and snowboard, and you can decide whether you want to attach them to the side or front.

It's made in a very durable 320D recycled nylon (ECONYL®) with PU coating 2000 mm and the zips are water-resistant. Laminated details ensure extra protection and a clean finish. The back is solidified with an aluminum frame to make it more stable and enhance the functionality and comfort when carrying weight.

You have easy access to the main compartment from a zippered entrance in the back. Here, you'll find a dedicated hydration pocket with connected with a sleeve down the carrying strap. The top lid is made quite big so you have room for the gear you need quick access to. There is an integrated helmet net that can be mounted on the front or underneath the pack and the net is designed to prevent snow from getting inside your helmet.

Other functional features include compression straps on the side, two ice ax attachments, thermo shaped back panels, hip belt with pocket and a chest strap. You can hide away straps if you need it for everyday use.

lyngen 45L Pack

2002-19

The lyngen 45L Pack is a ski mountaineering pack with plenty of room for your equipment during a full day in the mountains.

The lyngen 45L Pack is a ski mountaineering pack with plenty of room for your equipment during a full day in the mountains. The main compartment is easily accessible through wide zipper opening in the back, even with skis fixed to the pack.

One spacious top pocket, two hip belt pockets, and the front compartment are all easily accessible through WR zippers. The front compartment contains probe and shovel divider and has plenty of extra room for your skins.

Ice axe and helmet can be attached to the front of the pack and 4 side compression straps ensure even compression. The skis are carried in A-frame on the side of the pack.

Extra ski loop is hidden at the front and can be used together with your ski strap fixed to a loop in the top handle for diagonal ski carry. Several inside pockets make it easy to organize your equipment.

The backpack is hydration compatible with hydration sleeve on the shoulder strap and inside hydration pocket.

The carrying system is supported with a lightweight aluminum frame inside the back. Thermoformed back mold, ergonomic shoulder straps, and laminated hip belt ensure comfort when carrying your stuff.

lyngen 40L Pack

2015-22

A lightweight, durable pack made for ski touring.

This 40L fully-featured pack is made for ski touring but is also suitable for mountaineering and trekking. The main fabric is durable ECONYL® material which offers premium quality and closed-loop regeneration processes.

The main fabric is lightweight 70D ripstop ECONYL® and the pack is reinforced with a 70X320D ECONYL®. Both qualities have a PU coating of 2000 mm and consist of 100% regenerated nylon yarn derived from pre and post-consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway). High-quality zippers from YKK.

The pack has a highly ventilated back, with an open-back construction to create a gap between the back and the pack. The frame is made of steel and is arched in the back, shaped to make the back of the pack bend inwards itself. The aluminum bar helps keep the shape and prevents the volume from bulging out.

The pack has a big main compartment, spacious top compartment, a sectioned compartment for your avalanche equipment, and an easily accessible bottom compartment perfect for crampons and a rope. It's made for carrying both ski and snowboard, and you can decide whether you want to attach them to the side or front. You have easy access to the main compartment from a zippered entrance in the back, where you also find a dedicated hydration pocket connected with a sleeve down the carrying strap. There is an integrated helmet net that can be mounted on the front or underneath the pack and the net is designed to prevent snow from getting inside your helmet.

Other functional features include compression straps on the side, two ice ax attachments, a hip belt with pocket, and a chest strap with a flute buckle. You can easily hide away the straps in a little slit pocket if you need the pack for everyday use. The adjustable shoulder straps are made in a 3D construction to provide even more breathability.

D30 removable Back Protector

9601-18

D30® removable back protector for the skibotn 15L pack and the fjørå 18L pack.

D30® removable back protector for the skibotn 15L pack and the fjørå 18L pack. D30® core patented technology is based on non-Newtonian principles.

In standard conditions, the polymer chains on a Non-Newtonian fluid flow freely, allowing the material to remain soft and flexible but on impact, they lock together dissipating the impact energy, reducing the force transmitted. This event lasts milliseconds; the polymer then instantly returns to its flexible state. The D30® patented technology incorporates this Non-Newtonian into other polymers for a rate sensitive solution.

Iofoten Gore-Tex thermo200 long Gloves Unisex 1024-20

Our warmest, waterproof, fully featured long ski/snowboard gloves.

Offering great protection, high-performance insulation, and premium materials, they're ready to join in on any cold day adventure.

The durable gloves are made in a functional combination of premium Pittard goat leather, stretchy softshell fabric, a waterproof Gore-Tex liner and thermoregulating, recycled insulation. This ensures a soft glove with hardcore functionality designed with dexterity at its core. It has a snug fit with pre-curved fingers for extra comfort and ergonomic perfection, and high cuffs for extra protection. The softshell face fabric has good stretch for comfort and mobility, and the inserted Gore-Tex liner makes it waterproof yet breathable. The inner liner is made soft, recycled polyester that provides moisture transportation and is combined with Pinnecco to add some extra loft.

Other features include wrist strap adjustment, elastic hem cord, removable glove leach, small glove loops to make them easy to take on and off, a minimalistic connection hook and a suede wipe area on the thumb. The durable leather is used in the palm and on the back of the hand and has been DWR treatment for extra protection.

Natural

Water Repellent Natural (1.2 l pack)

9605-16

Eco-friendly water repellent for technical materials.

Water repellent restores the breathability of technical materials and polyester and the repellency of water on the fabric. This is a great Eco-friendly alternative to other water repellents out in the market. Can be used on Gore-Tex, dri and other technical fabrics.

Clothing article should be clean and dry.

Shake the bottle well before use.

Spraying should be as evenly as possible.

Shake the bottle well before use for 15-20 minutes.

Spray the article as evenly as possible.

Dry the water repellent for 5-20 minutes in air, sunlight or similar.

Drying directions for technical materials must be followed.

Empty the clear and close the spray nozzle if you wish to use it again. Washing directions for the fabric MUST be followed.

If the water repellent is not sprayed evenly, the article can become discolored. This is easily removed by washing.

Fluorocarbons are not used in the products and do not contain propellants that contribute to global warming or CFC gasses that destroy the ozone layer.

The products are free from fluorocarbons and do not contain propellants that contribute to global warming or CFC gasses that destroy the ozone layer.

oslo Gore-Tex insulated Parka M's

4808-18

The waterproof and insulated oslo Gore-Tex insulated Parka is made for everyday use and makes sure you stay protected during winter time.

This lighter version of one of our most appreciated winter jackets offers a great combination of protective technologies and sophisticated design.

The classic parka is perfect for everyday use when the temperature drops and wind and snow is a regular, and also, an applicable choice on milder winter days. The parka has a waterproof and recycled Gore-Tex® outer layer and a recycled PrimaLoft® insulation.

The cut is long to keep your butt from freezing and it has a protective hood with one-hand adjustment. Other features are double sets of fleece-lined front pockets for your everyday stash; the lower ones close with a zip and the upper with flaps with storm guards, a big inside mesh pocket, front plackets with zipped pockets and buttoned tabs to adjust the sleeves.

There are reflective, transparent prints in the front and on the lower back to increase visibility in the dark. It is the number one choice for everyone who needs a really warm jacket, and even if it does not make waiting for the train or removing ice from your car more fun it sure makes it a lot more pleasant.

Size and fit guide

The fit will describe the width of the body and arms of jacket. Arm length, and jacket length is not influenced by the fit.

Men's jackets Outer/Shell

Metric

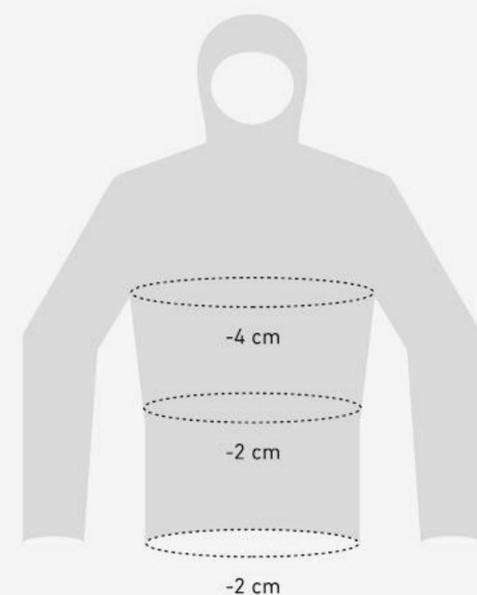

Slim Tight fit

Typically made for high intensive activities like running and biking. This fit is made to follow the body shape, and create a minimal room between the body and the jacket. Works best with layers that also have a slim or technical fit, not room for a lot of extra stuff under the jacket.

Fit under the jacket
Thin midlayers, thin insulation.

Typical products
Light shell jackets, light wind jackets and light softshells

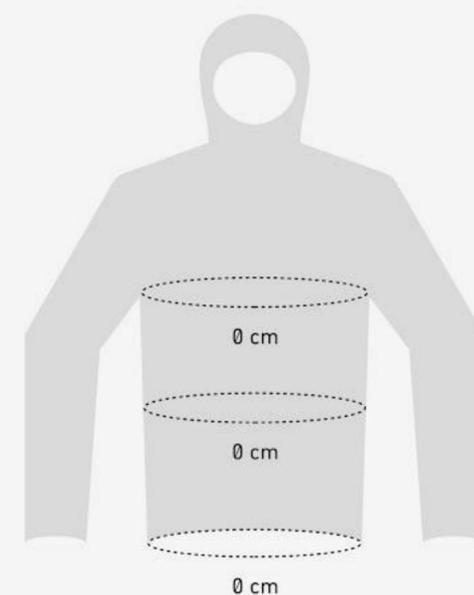

Technical Fitted fit

Typically made for mountain biking or mountaineering/ climbing activities. The fit is made for perfect balance between allowing multiple layers underneath, but the jacket should not restrict movements or view when climbing or mountaineering.

Fit under the jacket
Different thickness of mid layers or down synthetic insulation. Preferably with Technical or regular fit.

Typical products
Shell jackets, wind jackets and softshells.

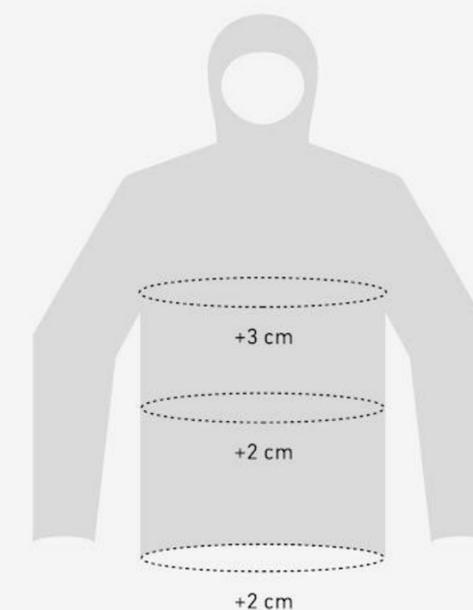

Regular* Normal fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Shell jackets, insulated shells, wind jackets and insulation.

Relaxed Loose fit

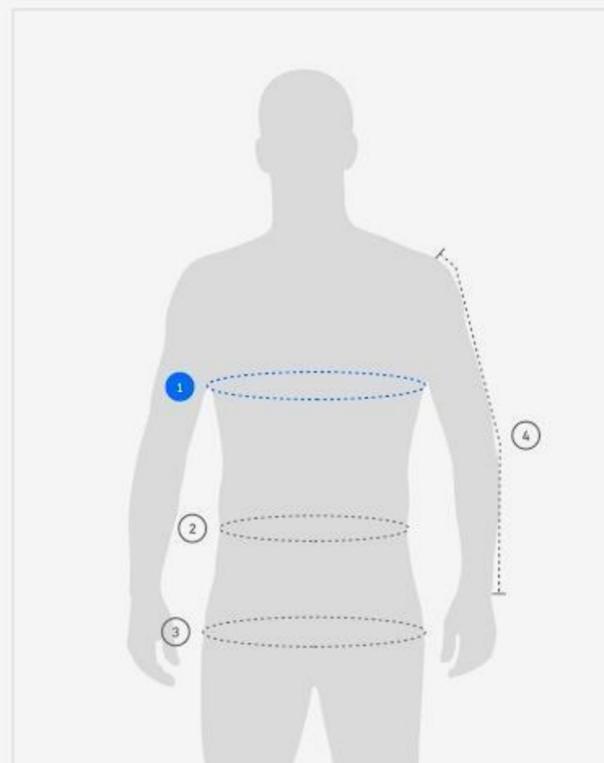

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Thicker shells, insulated shells and insulation.

Women's jackets Outer/Shell

Metric

Slim Tight fit

Typically made for high intensive activities like running and biking. This fit is made to follow the body shape, and create a minimal room between the body and the jacket. Works best with layers that also have a slim or technical fit, not room for a lot of extra stuff under the jacket.

Fit under the jacket

Thin midlayers, think insulation.

Typical products

Light shell jackets, light wind jackets and light softshells

Technical Fitted fit

Typically made for mountain biking or mountaineering/ climbing activities. The fit is made for perfect balance between allowing multiple layers underneath, but the jacket should not restrict movements or view when climbing or mountaineering.

Fit under the jacket

Different thickness of mid layers or down synthetic insulation. Preferably with Technical or regular fit.

Typical products

Shell jackets, wind jackets and softshells.

Regular* Normal fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket

Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products

Shell jackets, insulated shells, wind jackets and insulation.

Relaxed Loose fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

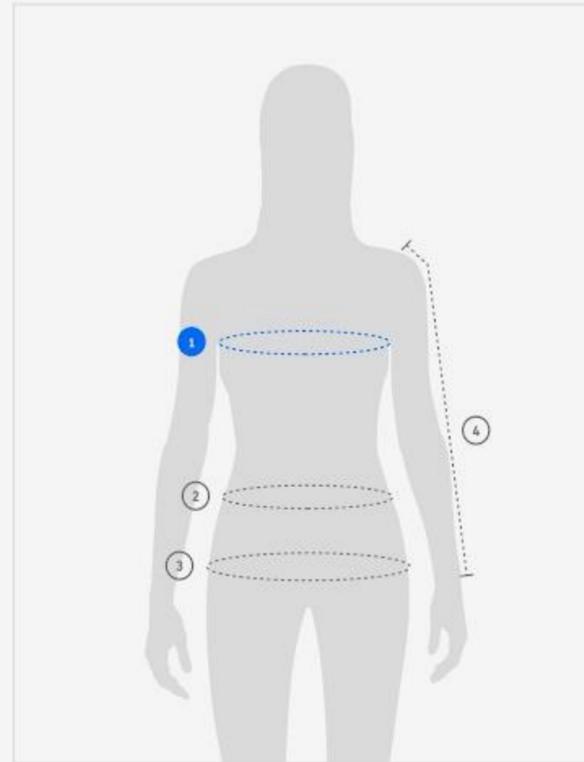

Fit under the jacket

Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products

Thicker shells, insulated shells and insulation.

Technology and materials

Learn more about the technology and material we use in our products and how we rate our product's performance.

Waterproof fabric

Gore-Tex® Pro most rugged is the most durable option designed for the harshest conditions, using a special high strength membrane, while maintaining durable waterproofness. It comes with a solution dyed woven GORE micro grid backer (plain weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. It's the ultimate storm protection fabric. RET less than 13.

Gore-Tex® Pro most breathable is designed for extreme breathability to minimize moisture build up. Using a special air permeable membrane with durable waterproofness, it improves your base layer's drying time to ensure comfort in demanding conditions. It comes with a solution dyed woven GORE micro grid backer (ripstop weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. The ultimate storm protection fabric. RET less than 6.

Gore-Tex® fabrics are durable, waterproof and windproof, combined with optimized breathability—ensuring products that maximize protection and comfort for the user. Waterproof: 28,000mm. Breathability: Extremely good, RET 3-6.

Gore-Tex® Active is waterproof, extremely breathable, and windproof. Low weight, low volume, soft and easy to pack, Gore-Tex® Active is good for more aerobic activities where you need protection from rain and wind. RET less than 3.

Gore-Tex® 3-layer has a unique 3-layer construction made for year-round use and a wide range of outdoor activities. It has a special Gore-Tex® membrane, bonded to a highly breathable outer material and an incredibly comfortable interlock knit inner lining. The benefit: comfort in warm and cold weather and no movement between the three layers, which means less wear and tear, and even greater durability. RET less than 6.

Gore-Tex®C-KNIT™ Backer Technology is specifically engineered for hikers, trekkers, and freeriders – optimizing comfort while providing durable, waterproof and windproof protection. The reliable and proven bi-component Gore-Tex® membrane system is bonded to an extremely thin, dense yet lightweight circular knit to form a patent-pending laminate. Weighing up to 10 percent less than previous 3-layer Gore-Tex® fabric, this new laminate improves breathability by as much as 15 percent in a less bulky, more robust 3-layer construction. The smooth texture of the knit backing is soft to the touch, and makes the garment easier to slide on and off over other layers. RET less than 6.

Gore-Tex® Shake Dry The new Gore-Tex® Shake Dry fabric durably protect against the weather and reduce sweat accumulation in high aerobic activities. Uniquely designed, the technology eliminates the face fabric, preventing absorption of water in order to maintain comfort in high aerobic activities. Garments will retain these attributes during use, wearers will not experience the chilling effect that can result from a wetted out face fabric, and the garment dries out fast. The excellent balance of protection and comfort allows the wearer to leave the garment on – rain or shine. RET less than 3. Read more at goretex.com.

dri™1 A super comfortable 2,5 layer offering full weather protection and high breathability. Stretchy, non porous, hydrophilic membrane utilizing a stretch woven face fabric and a printed PU membrane with quick drying technology.

dri™2 A 2-layer, ultra-thin, stretchy, non-porous, hydrophilic membrane that provides high levels of waterproofness and breathability. Technical Specifications: Waterproof: min. 20,000 mm. Breathability: Very good. Windproofness: 100%.

dri™3 A super comfortable combination of full weather protection and the comfort of highly breathable laminate. Non porous, woven face fabrics, a PU membrane featuring a quick drying micro polyester backer. Specifications: Waterproof: 20,000mm. Breathability: Very Good. Windproofness: 100%.

Wind resistant shells

Gore-Tex Infinium™ membrane is an ultra-thin weather protective layer which is laminated to various textile layer. Products made with Gore-Tex Infinium™ fabrics are totally windproof, highly water repellent yet deliver maximum breathability to keep you comfortable in cool and windy weather conditions. This combination of protection and breathability minimizes the wind's chilling effect while reducing the risk of overheating when you are active. Read more at goretex.com.

aero100™ is a light weight and technical polyamide fabric which offer excellent breathability (around 100 Mbar/l/m²/s). It is soft, water repellent and wind resistant with a weave construction designed to improve moisture vapour transportations during aerobic activities.

Softshells

flex™1 is a single ply stretchy fabric that provides wind and water repellence while allowing improved moisture vapor transportation rates compared to waterproof products. These specially designed fabrics have all the attributes we expect in a Soft Shell: stretch, water resistance, wind resistance and excellent moisture vapor transportation.

flex™3 is a 3-layer soft shell fabric that provides wind -and water-resistance while still allowing great moisture vapor transportation – perfect to use as a reinforcement fabric The face is made of durable nylon and backer wickable polyester.

Insulation materials in outerwear

PrimaLoft® is a patented microfiber, that gives great thermal insulation to help the body maintain its temperature, minimizing energy loss. Extremely light, water repellent, soft and compressible, and originally developed by the US Army to replace natural down. As down absorbs moisture, it becomes wet and loses its thermal-insulating abilities. PrimaLoft® absorbs three times less water, is 14% warmer when dry and 24% warmer when wet, than the competitive insulation. Read more at primaloft.com.

Polartec® LLC is the developer, manufacturer, and marketer of Polartec® performance fabrics. Polartec® products range from light weight wicking base layers, to insulation layers, to extreme weather protection and are utilized by the best clothing brands in the world. Read more at polartec.com.

Polartec® Thermal Pro® creates air pockets that trap air and retain body heat, providing outstanding warmth without much weight. These fabrics offer excellent breathability and dry quickly.

Polartec® Power Stretch® is a breathable, body-hugging, 4-way stretch, one-side fleece designed to keep you drier when you sweat and provide warmth without added weight. Outside face is smooth to provide better freedom.

Polartec® Power Stretch® Pro™ has the ability to retain warmth without restricting movement or agility during activities. The outer surface has a low-friction finish to reduce irritation when worn with other fabrics and increase overall abrasion resistance. This next-to-skin layer stays dry, breathable and comfortable by continuously transferring moisture vapor for rapid evaporation.

Polartec® Micro fleece fabric provides versatile thermoregulation that sustains light weight, breathable and fast drying characteristics.

Polartec® Alpha® starts with a highly efficient insulation fabric, which is based on the Polartec® Thermal Pro® High Loft technology platform. This technology is uniquely suited to create warmth without weight, and exceptional breathability, compressibility and dry times via high loft fibers in a low density knit. Current market synthetic insulations are not breathable enough to handle the “go” phases of most backcountry pursuits. They are typically additional garments that must be carried for use during static period. Polartec® Alpha excels at providing comfort for users on the move.

Polartec® Power Dry® pulls moisture directly from the skin and transfers it to the outer surface to quickly dissipate. This continuous evaporation process helps to keep you cool (as your body heat increases) and warm (when temperatures begin to drop). By physically embedding these wicking capabilities into the fabric structure, Polartec® Power Dry® doesn't rely on chemical fiber treatments to transfer moisture. Chemical approaches to managing saturation only provide a temporary solution that can wash away and leave you with a base fabric that doesn't perform.

Polartec® Power Grid is a patented grid design structure which reduce fabric weight while increasing warmth and compressibility.

Polartec® Power Wool™ is a design breakthrough for combining the distinct advantages of natural and synthetic fibers in a bi-component fabric. The industry standard of blending different yarns into a mixed composition reduces the intended benefits and hampers overall fabric performance. By isolating a merino wool interior and a synthetic fiber exterior we developed a hybrid fabric with distinct surface features to optimize wicking, breathability, odor resistance and durability.

Polartec 200 Series The classic midweight fleece. Polartec® Fleece is the original synthetic fleece, forever changing what we wear in colder weather. This now proven thermal knit technology delivers breathable performance, soft comfort and long-lasting breathability.

thermo40 “Thermo” is our general term for any synthetic insulation. It gives great thermal insulation to help the body to maintain its temperature, minimizing energy loss. We use synthetic insulation as an alternative to down, as it keeps its functionality even in wet conditions. While moisture is the weak point of down, synthetic insulation shows its strength during sweat-inducing activities, when being exposed to rain or under continuous humid conditions. Synthetic insulation provides a very good warmth-to-weight-ratio and is easy to maintain. The number behind Thermo refers to the weight in gr/sqm of the insulation used in the product. The suppliers of our synthetic insulation are Primaloft and Pinneco.

down™750 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™750 means down fill power from 750 to 800 cu in/oz with the percentage of down cluster from 93–96%.

down™850 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™850 means down fill power from 850 to 900 cu in/oz with the percentage of down cluster from 93–96%.

down™950 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™950 means down fill power from 950 to 1000 cu in/oz with the percentage of down cluster from 93–96%.

Insulation materials in midlayers

warm™1 Weighing under 200 grams/m², these are our lightest fleeces. Perfect as a midlayer, or wear it instead of a jacket without compromising on insulation and breathability. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warm™2 Weighing between 200 and 300 grams/m², these fleeces allow a good combination of warmth and moisture transportation. They provide more bulk and trap more air than our warm™1 fabric. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™1 Weighing under 200 grams/m², these are our lightest wool mix for brushed knits. The material composition mix emphasis the benefits from the natural performance from wool and the durability, low weight and wicking performances from synthetics, to combine the best of two worlds. Perfect as a midlayer, or as a baselayer without compromising on insulation and breathability. These knits are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™2 Weighing between 200 and 300 grams/m², these are our mid-weight wool synthetic blends. They are bulkier and trap more air than our warmwool1 fabrics. The material composition mix emphasizes the benefits of wool's natural properties and the durability, low weight and moisture-wicking performances of

synthetics. These fabrics are among the best in the market, and their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

warmwool3 Weighing 300 grams/m² and above, these are our higher weight wool synthetic blends. They are bulkier and trap more air than our warmwool2 fabrics. The material composition mix emphasizes the benefits of wool's natural properties and the durability, low weight, and moisture-wicking performances of synthetics. These fabrics are among the best in the market, and their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Wool

pureUll An all-natural material consisting of 100% merino wool. Made with an ultra-fine 18.5 wool micron, it offers the perfect balance between performance and non-itching softness. Medium-weight (180gr/sqm) single jersey knit, designed to offer a versatile and flexible inner layer. Highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging. It is temperature-regulating and regulates the core temperature by both insulating and cooling, providing comfort across a range of climates. It retains body heat while transporting moisture away from the body, keeping you dry and warm, even when wet. It absorbs moisture without feeling wet and has good moisture wicking function while offering great moisture vapor transmission. It also has natural anti-odor control. For environmental reasons we have not used any surface treatments. This enhances its natural benefits and gives the material a super soft, warm feel with a slightly fuzzy outside. The natural loft also traps heat very efficiently between the fibers, making it warmer than a synthetic alternative of the same weight. The wool is RWS certified.

Other materials/technologies

hiloflex™ Weighing between 200 and 300 grams/m², these double weave constructed materials provide a unique combination of warmth and weather protection. While many conventional fleeces are less durable due to their knit construction, the fabric has a much more durable surface due to its woven flat face. This makes it strong towards abrasion and keep the material wind and water resistant. A lofty interior provides great thermal properties with a good warmth to weight ratio. Thanks to an open construction, the fabric is highly breathable, and it offers a perfect balance between heat and comfort dynamic warmth. Stretch in at least one direction ensures very good mobility and comfort when being active.

Viking denim Our newly developed Viking denim is designed to combine sustainable, functional fibers with organic cotton creating a classic denim with enhanced functions. This innovative fabric is extremely durable, lightweight and flexible with quick drying moisture wicking capabilities. Blended perfectly into timeless designs, we're introducing a new generation of sophisticated outdoor apparel that works seamlessly wherever you're heading.

bio These materials biodegrade in specific environments under certain conditions, such as landfills and oceans, yet remain unchanged in the consumer's wardrobe. The ability to biodegrade is important once these fibers make their way outside of the closed loop and into the environment. This happens because fibers are broken down and released due to normal wear and tear and washing of a garment, or when a garment is not disposed of safely and finds its way into a landfill or ocean water.

DWR Durable Water Resistant finish to prevent surface saturation of the textiles. Contains of short chain fluorocarbon based C6.

Pontetorto A world renowned mill from Italy founded 1952. Specialized in technical knits/fleeces with highest quality.

viking grid200 is designed as reinforcement fabric with high cut resistance. It's mainly used as instep reinforcement in our ski pants to prevent that ski steel edges cause damage to the fabric. The innovative fabric is extremely durable, it is synthetic woven in a 3L laminate construction combined with high-strength fibers in one direction, which makes it one of our strongest fabric in the collection. The surface is DWR treated for great water protection. The weight for this type of material is 200-300 grams/m².

viking grid300 is designed as reinforcement fabric with high cut resistance. It's mainly used as instep reinforcement in our ski pants to prevent that ski steel edges cause damage to the fabric. The innovative fabric is extremely durable, it is a synthetic woven in a 3L laminate construction combined with high-strength fibers in both directions, which makes it our strongest fabric in the collection. Due to a special yarn design it will keep its strength even if exposed to UV light. The surface is DWR treated for great water protection. The weight for this type of material 300g and above.

Organic Cotton is produced without the use of harmful pesticides, harsh chemical bleaches or dyes and is allergy-free. Today Norrøna uses 100% organic cotton in all of our cotton products.

BioNylon® is a highly sustainable bio mass fabric made of castor bean – a crop which requires just a fraction of arable-land. The production of the yarn allows a significant reduction of carbon dioxide in addition to considerably reduce CO₂ during the dyeing process. The fabric offers the usual assets of PA such as hard-wearing properties, good flexibility and comfort, but with a shorter drying time.

PFC-free Products marked with “PFC-free” are not treated with a DWR that contains PFC (polyfluorinated chemicals). We are working determinately to phase out PFC from all of our products, but it is difficult to find an alternative that satisfy our quality demands.

ECONYL® yarn is a 100% regenerated nylon yarn derived from pre and post consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway). The aim of this process made by Italian company Aquafill is to give a new life to all kind of waste in order to make our environment cleaner. All new Norrøna backpacks from FW1920 are made from ECONYL® yarn.

MulesingFree Mulesing is a controversial surgical procedure removing wool-bearing skin from the tail and breech area on sheep to prevent fly infestation. The process is usually done without any without anaesthetisation and can be extremely painful. As a part of our animal welfare commitment, we only source traceable wool from sheep that have been treated well and not been mulesed.

ePTFE™ Expanded polytetrafluoroethylene, or ePTFE, is the core material in many of Gore's solutions. An ePTFE membrane is created when PTFE – a linear polymer consisting of fluorine and carbon molecules – is expanded, creating a microporous structure with very desirable characteristics, including a high strength-to-weight ratio, biocompatibility, high thermal resistance and many others. ePTFE is inherently waterproof, windproof and chemically inert, and each ePTFE membrane is adjusted to maximize its inherent properties to meet those requirements. For instance, Gore-Tex® ACTIVE PRODUCTS offer superior water-beading for cyclists and other athletes wanting to reduce moisture accumulation, either from sweat or rain. For this application, the ePTFE membrane is engineered for maximum breathability – allowing sweat to vaporize – while repelling wind and rain.

PU (Polyurethane) is a laminated membrane or coating used on face fabric to provide waterproof yet ventilating properties. The membrane has tiny holes too small to let liquid water enter but large enough to allow water vapour to escape.

Pittards Established in 1826, Pittards has been making high quality leather in England for almost 200 years. Pittards technical expertise of performance leathers. Incorporating technical qualities such as resistance to water, abrasion, and staining, We use Mainly goat and sheep leather for a great balance between function and tactile feel.

YKK Aquaseal® zipper is a watertight and water repellent product line. They are perfect for all sorts of gear where water and air tightness is a must. Smoother and more flexible, they offer optimum protection thanks to the film coated tape and the innovative zip element mechanism that seal the zipper completely. This is the first truly waterproof zipper provided on Norrøna products. Read more at aquaseal.com.

equalizer1 A synthetic technology with next-to-skin comfort, used for baselayers such as technical t-shirts. The main function is to wick moisture and spread it to a larger area to be able to dry quickly for increased comfort and performance. Other characteristics are good UV protection, low weight, soft touch and durability.

Pertex® uses incredibly fine yarns, precisely woven to provide a very lightweight yet strong and durable fabric. Its softness allows down and synthetic insulation to fully loft, while the downproof construction prevents the down from leaking through the face. The fabric is windproof. Our products use different variations, such as Quantum, Classic and Microlight These have the same fundamental characteristics but vary on weight.

Zxion® A polyester fiber with high tensile strength and great elasticity. It has excellent heat resistance, acid resistance, resistance to cutting, vibration damping property, and low water absorption.

Cordura is the brand name for a collection of fabrics used in a wide array of products. Cordura fabrics are known for their durability and resistance to abrasions, tears and scuffs. Cordura fabrics are usually made of Nylon 6.6 High Tenacity, but may be blended with cotton or other natural fibers.

Clarino Manmade synthetic like material, used in gloves. Made by Kuraray Co., Ltd of Japan. During manufacturing it is microscopically perforated to give it breathability similar to that of natural leather. Clarino is based on a non-woven fabric composed of special synthetic fibers that are intertwined three-dimensionally. The material's softness and suppleness arise from the structure of the non-woven fabric's special fibers—a superfine fiber construction and tiny cavities. Superb durability, softness when wet and allow a close fit with great tactility is main characteristics of the quality.

Carrying systems

integral™ is a solid, anatomical carrying system for moderate loads, up to 15 kg. Emphasis is placed on hip movement, weight distribution and practical solutions. Consisting of a laminated back with a vertical aluminium bar, it makes a classic yet sturdy carrying system, that can also be shaped after your back.

dynamic™ Our carrying system without aluminum support bars or frames. We use these systems on many of our small packs where flexibility is a key factor.

CSR Standards

GOTS stands for Global Organic Textile Standard and is constituted of four reputable organizations with expertise in organic (fiber) farming as well as environmentally and socially responsible textile processing and manufacturing.

The standard stipulates requirements throughout the supply chain for both ecology and labor conditions in textile and apparel manufacturing using organically produced raw materials.

The Responsible Down Standard (RDS/RDS2.0) ensures that down and feathers come from ducks and geese that have been treated well. This means enabling them to live healthy lives, express innate behavior, and not suffer from pain, fear or distress. The standard also follows the chain of custody from farm to product, so consumers can be confident that the down and feathers in the products they choose are truly RDS.

The Responsible Wool Standard safeguards the welfare of animals and ensures that sheep are treated with respect to the Five Freedoms. Through the processing stages, certification ensures that wool from certified farms is properly identified and tracked. Farms participating in the RWS are audited annually by an independent third party certification body. As certified wool from these farms moves through the supply, the Textile Exchange Content Claim Standard is used to provide a chain of custody system to the final product. Each stage of production is certified to this standard by an accredited third party.

Norrøna uses RWS as a minimum standard for our wool. While we are trying to get all our suppliers to use RWS due to its international standard, over the past year we have found different degrees of compliance through the whole supply chain. As this is a new standard, we have found some of our suppliers having difficulty fulfilling the paper trail. In those cases where we can not fully verify the RWS standard we still rely on 3rd party verification to ensure traceability and full compliance with RWS standards.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability. For our wool products which do not currently have RWS certification, we can show robust 3rd party verification equal to our RWS certified.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability.

For our wool products which do not currently have RWS certification, we can show robust 3rd party verification equal to our RWS certified wool. All the wool we buy has a premium for the quality, sustainability and traceability to ensure us and our consumers of both and sheep and the lands wellbeing.

PFCec FREE stands for "Per and Poly-Fluorinated Chemical free of Environmental Concern", which means that the water repellent treatment (DWR) of all products marked with "PFCec FREE DWR" does not contain PFCs which break down and dissolve into water, soil or air, and therefore do not harm the environment. Gore laminates with a PFCecFREE call out do not have surface PFC agents on both textile and membrane.

Gore is committed to continuously reducing the environmental footprint of their products while maintaining a high level of durability and performance. Gore has therefore set the goal of eliminating PFCs of Environmental Concern (PFCec FREE) by 2023.

OekoTex is an independent testing and certification system for raw, semi-finished, and finished textile products at all processing levels. To be certified all parts of an article must meet the required criteria – in addition to the outer fabric, for example, also the sewing threads, inserts, prints etc., as well as non-textile accessories, such as buttons, zip fasteners, rivets etc.

Bluesign The independent bluesign® system pursues the unique approach to minimize the environmental impact of materials throughout the production process. The so-called Input Stream Management ensures that all during the textile production process applied substances and raw materials are already verified in advance of the production. The system focus guarantees the application of sustainable ingredients in a cleaner process that reduces water and air emissions, improves its waste water treatment and generally reduces its ecological footprint.
